Community Involvement Plan – Introduction

The Arizona Department of Environmental Quality (ADEQ) is committed to involving citizens in the cleanup of contaminated sites in Arizona per the Water Quality Assurance Revolving Fund (WQARF) program. Created under the Environmental Quality Act of 1986 to support hazardous substance cleanup efforts in the state, WQARF is dependent upon legislative appropriations, cost recovery from responsible parties, corporate income taxes, and special fees for its funding.

The WQARF program identifies sites that are most in need of cleanup and adds them to the WQARF Registry. Sites on the WQARF Registry receive primary consideration for the distribution of funds for investigation and cleanup. WQARF sites are assigned a numeric score based on several factors including the types of contaminants present, the location of the contaminants, and the number of people who may be affected by the contaminants. These scores are only one criterion used to help determine relative risk at the site and do not necessarily mean that there is a direct risk to humans or the environment.

The Central Phoenix community involvement areas are located in central Phoenix, Arizona, and include the 7th Avenue and Bethany Home Road, 7th Street and Missouri Avenue, 16th Street and Camelback, and Central and Camelback WQARF sites. Collectively these sites will be referred to as the Central Phoenix WQARF sites. In 1997, ADEQ established the WQARF Registry, which replaced the WQARF Priority List. From 1999 to 2016, the four Central Phoenix WQARF sites were placed on the WQARF Registry.

- The 7th Avenue and Bethany Home Road WQARF site was placed on the WQARF Registry in 2004 with a score of 29 out of a possible 120.
- The 7th Street and Missouri Avenue WQARF site was placed on the WQARF Registry in 2016 with a score of 42 out of a possible 120.
- The 16th Street and Camelback WQARF site was placed on the WQARF Registry in 1999 with a score of 23 out of a possible 120.
- The Southwest Corner Source Area (SCSA) of the Central and Camelback WQARF site was placed on the WQARF Registry in 1999 with a score of 31 out of a possible 120. In June 2000, the entire Central and Camelback WQARF site, inclusive of the SCSA, was placed on the WQARF Registry with a score of 32 out of a possible 120.

Arizona Revised Statutes (A.R.S.) § 49-287.03(B) and § 49-289.03, as well as Arizona Administrative Code (A.A.C.) R18-16-404, specify that a community involvement plan (CIP) be developed for each site on the WQARF Registry before beginning the Remedial Investigation. Because the 7th Avenue and Bethany Home Road, 7th Street and Missouri Avenue, 16th Street and Camelback, and Central and Camelback WQARF sites are located near each other, one CIP has been developed to encompass all four sites. The purpose of the CIP is to provide a meaningful process for two-way communication between ADEQ and the public in order to keep the community informed about the progress of the site investigations and remediation. The CIP will accomplish this goal using the following steps:

1. Ensure public access to project information in a timely manner;
2. Identify a community involvement area and opportunities for community members and other stakeholders to participate in the decision-making process associated with the environmental investigation and remediation of each of the four sites;

3. Establish a Community Advisory Board (CAB) for the Central Phoenix WQARF sites;

4. Designate an ADEQ spokesperson; and

5. Develop a plan for distributing site information to residents within each site’s community involvement area.

This CIP will describe ADEQ’s role and public participation opportunities regarding the WQARF process. ADEQ community involvement staff will review and update this plan on a regular basis taking into consideration site-specific developments and public health and environmental impacts, as well as public comments and community concerns. ADEQ also will solicit and consider CAB input to this CIP.

A. WQARF Process

The goal of the WQARF process is to clean up sites with groundwater and/or soil contamination as a means to ensure human health and the environment are protected. The WQARF process uses a step-by-step approach to thoroughly investigate contaminated sites and determine the best method for achieving site cleanup. This process can take months, years, or in some cases, decades, to complete. Because each site is different, the WQARF process helps determine which cleanup method is best for a specific site.

For sites where the contamination has minimal impact to humans, cleanup may be achieved by restricting land or water use and allowing the contamination to dissipate naturally. For this method, regular monitoring of the groundwater or soil would occur to ensure that the contamination continues to decrease. For sites where the contamination may impact human health, the cleanup method may involve restricting land and water use, actively treating or filtering the groundwater to remove contamination, digging up any contaminated soil and removing it from the area, bioremediation/other in situ methods, or a combination of these actions.

The following WQARF process flow chart depicts the different phases in the WQARF process, from the initial investigation of a site suspected of having contamination, to the implementation of the cleanup method (also known as the remedy), to finally the eventual removal of the site from the WQARF Registry upon satisfactory cleanup. Detailed definitions of each WQARF phase can be found in the glossary at the end of this CIP.
B. Designated Spokesperson

A designated spokesperson will inform the public of upcoming events, ensure that the CIP is implemented according to schedule, and act as liaison between ADEQ and the community. Additionally, the spokesperson will determine methods for personal contact, arrange for the availability of a translator at meetings as needed, and coordinate the recording of presentations. For further information regarding the Central Phoenix WQARF sites, please contact the designated spokesperson at the following:

C. Information Repository and Website

Information repositories of existing public documents pertaining to the Central Phoenix WQARF sites are available for review both online and in person. Documents found in the repositories may vary across sites, but include WQARF Site Registry Reports, Remedial Investigation Reports, Feasibility Studies, Proposed Remedial Action Plans and other milestone documents, as well as site fact sheets, public notices and meeting documents related to the WQARF sites. Technical documents relating to future milestones in the WQARF process will be made available to the public as they are completed. Interested parties can review site information by visiting the information repositories online or in person as follows:

**Online**

7th Avenue and Bethany Home Road (http://www.azdeq.gov/node/323)
7th Street and Missouri Avenue (http://www.azdeq.gov/node/1120)
16th Street and Camelback (http://www.azdeq.gov/node/809)
Central and Camelback (http://www.azdeq.gov/node/829)

**In Person**

ADEQ Records Center
1110 West Washington Street
Phoenix, AZ 85007
(602) 771-4380
Or
(800) 234-5677, Ext. 6027714380
(Please call to make an appointment)

To make alternate arrangements to review documents in person at a location nearest you, contact the ADEQ Community Involvement Coordinator.
Chapter 1 – Site Overview

The contaminated groundwater plumes at the Central Phoenix WQARF sites are shown on the following map.

7th Avenue and Bethany Home Road

The 7th Avenue and Bethany Home Road WQARF site is located in a mixed commercial and residential area of central Phoenix, Arizona. The contaminated groundwater plume is bounded approximately by Maryland to the north, West Bethany Home Road to the south, North 5th Avenue to the east, and North 8th Avenue to the west. It includes the 2.6-acre former shopping center east of Seventh Avenue that housed a dry cleaning facility, as well as a former dry cleaner west of Seventh Avenue. The site was placed on the WQARF Registry in 2004 with an eligibility and evaluation score of 29 out of a possible total of 120. The major factor leading to the site’s score was the presence of tetrachloroethene (PCE) contamination in groundwater at levels exceeding Aquifer Water Quality Standards (AWQS).

The contaminants of concern at the site are PCE, trichloroethene (TCE), and vinyl chloride.

On June 30, 2016, ADEQ issued the Record of Decision which provides a description of the remedy, a responsiveness summary regarding all comments received on the Proposed Remedial Action Plan, a time for completing the remedy, and a total estimated cost.
7th Street and Missouri Avenue

The 7th Street and Missouri Avenue WQARF site is located in a mixed commercial and residential area of central Phoenix, Arizona. The contaminated groundwater plume is bounded approximately by Bethany Home Road to the north, East Georgia Avenue to the south, North 12th Street to the east, and North 6th Street to the west. The site was placed on the WQARF Registry in 2016 with an eligibility and evaluation score of 42 out of a possible total of 120. The major factor leading to the site’s score was the presence of PCE and TCE contamination in groundwater at levels exceeding AWQS.

The site contaminants of concern are PCE and TCE. In 2018, the Draft Remedial Investigation report was released for public comment and an early response action to investigate soil gas concentration began in 2018 near the southwest corner. The remedial objectives were also released for public comment in 2018.

16th Street and Camelback

The 16th Street and Camelback WQARF site is located in a commercial area of central Phoenix, Arizona. The contaminated groundwater plume is bounded approximately by Camelback Road to the north, Highland Avenue to the south, 17th Street to the east, and 15th Street to the west. The site was placed on the WQARF Registry in 1999, with an eligibility and evaluation score of 23 out of a possible total of 120. The major factor leading to the site’s score was the presence of PCE in groundwater at levels exceeding AWQS.

In May 2015, the Final Remedial Investigation Report was completed and in July 2015 the Feasibility Study Report was completed. In July 2016, the Proposed Remedial Action Plan for the WQARF site was completed. In April 2016, June 2017 and June 2018, to see if clean up could be accelerated, enhanced reductive de-chlorination (ERD) injections were initiated. If successful it may be incorporated into the final remedy.

Central and Camelback

The Central and Camelback WQARF site is located in a mixed commercial and residential area of central Phoenix, Arizona. Two contaminated groundwater plumes are bounded approximately by Georgia Avenue to the north, Mariposa Street to the south, 2nd Street to the east, and 1st Avenue to the west. The SCSA portion of the site was placed on the WQARF Registry in 1999 with an eligibility and evaluation score of 31 out of a possible total of 120. In June 2000, the entire Central and Camelback WQARF site, inclusive of the SCSA, was placed on the WQARF Registry with an eligibility and evaluation score of 32 out of a possible total of 120. The major factor leading to the site’s score was the presence of PCE in groundwater at levels exceeding AWQS.

The site contaminants of concern are PCE and TCE. Other contaminants, which resulted from past underground storage tank releases, are benzene, toluene, ethylbenzene, total xylenes, methyl tertiary butyl ether (MTBE), and 1,2-dichloroethane (DCA).
The groundwater remediation and treatment system and the soil vapor extraction system continue to operate full time with the exception of shutdown for Salt River Project canal cleanup and minor repairs. The Feasibility Study Report was also completed. In June 2017, the PRAP was completed and the ROD should be completed in fiscal year 2019.

For more detailed information about the history of the Central Phoenix WQARF sites, please refer to Appendix A (Site Histories) of this CIP.
This page was intentionally left blank.
Chapter 2 – Community Profile

A. Community Involvement Area

ADEQ has established a community involvement area for each site per A.R.S. § 49-289.02(A) and (B). A community involvement area is established to designate a geographic area to which mass mailings will be delivered. Community involvement area boundaries are determined based on site-specific characteristics such as the affected media (i.e., soil, surface water, or groundwater), exposure routes, proximity to residential areas and public facilities, and level of community interest. The community involvement area may change as new information is received.

The maps on the following pages illustrate the community involvement areas for the four Central Phoenix WQARF sites.
16th Street and Camelback WQARF Site Community Involvement Area (CIA)

- City Council District 6
- City Council District 4
- County District 3
- Legislative District 24
- 16th Street and Camelback WQARF Site Estimated Plume
- Groundwater Flow Direction
- Phoenix Council Districts 4, 6
- Maricopa County District 3
- Legislative District 24

*There are no Schools, Residential Health Care Facilities, or Child Care Facilities in this CIA.*
B. Community Demographics

In 2010, the population of Phoenix, the most populous city in Arizona, was 1,445,632 (as reported by the 2010 U.S. Census). The boundaries of the community involvement areas for the Central Phoenix WQARF sites encompass four zip codes (85012, 85013, 85014, and 85016) and are estimated to contain approximately 40,042 households. The Central Phoenix WQARF sites are located within the boundaries of the City of Phoenix and consist of a mixture of commercial businesses, light industrial businesses, and residential neighborhoods.

According to the 2010 U.S. Census data, the total population for the zip codes encompassed by the community involvement areas was 85,382, with an average household size of 2.06 persons. Residents of the areas consisted of more homeowners (54.7%) than renters (45.3%). The median resident age is 38.6, which is older than the median age for Arizona residents as a whole (35.9).1

As represented in the Population Groups graph that follows, the 2010 U.S. Census data demonstrates that residents in the Central Phoenix WQARF sites community involvement areas identify themselves as approximately 72.7% White; 10.9% Some Other Race; 6.0% Black or African American; 4.2% American Indian or Alaska Native; 3.5% Two or More Races; 2.7% Asian; and 0.1% Native Hawaiian.2 According to the U.S. Census Bureau, people of Hispanic or Latino descent may be of any race. People identifying themselves as Hispanic or Latino within the Central Phoenix WQARF sites community involvement areas comprised 26.2% of the population, which is lower than the 29.6% average Hispanic and Latino population for the State of Arizona.

All percentages provided in the following Population Groups graph and the previous two paragraphs are median averages of the 2010 U.S. Census data for the zip codes within the Central Phoenix WQARF sites community involvement areas.

---

1 Calculations are an average of the four zip codes.
2 Percentages are an average of the four zip codes and are rounded to the nearest tenth and thereby do not total 100 percent exactly.
Central Phoenix WQARF Sites
Population Groups

Note: Individuals identifying as Hispanic or Latino may be of any race and are already accounted for in the population percentages for the racial groups within each zip code, city, and state.
ADEQ also looks at the community as a whole with an emphasis on the percentage of people who are unusually sensitive to contaminants. These people are those who are under the age of 5 or over the age of 65, as well as those with health issues. The Vulnerable Population Comparisons graph that follows is based on 2010 U.S. Census data and presents the percentages of age-sensitive populations within the Central Phoenix WQARF sites community involvement areas.

For further demographic information regarding the community involvement areas, please refer to the listing of neighborhood associations, community schools, and vulnerable population centers in Appendix B, and local and state elected officials in Appendix C.
Chapter 3 – Community Issues and Concerns

In order to better understand the community and its concerns, ADEQ conducted telephone interviews with community and CAB members who have lived or worked in the areas surrounding the 7th Avenue and Bethany Home Road and Central and Camelback WQARF sites. The CAB members are listed in Appendix D. The following is a summary of their common concerns involving the environment, health, and ADEQ outreach activities. ADEQ did not conduct separate interviews for the 7th Street and Missouri Avenue and 16th Street and Camelback WQARF sites because they are located in the same vicinity as the 7th Avenue and Bethany Home Road and Central and Camelback WQARF sites, for which interviews were previously conducted. Additional interviews for the Central Phoenix WQARF sites may be conducted for future CIP updates, as necessary.

A. Environmental and Health Concerns

Interviewee familiarity with the 7th Avenue and Bethany Home Road and Central and Camelback WQARF sites and their contaminants varied. The concerns expressed by community and CAB members relating to the current status of the sites echoed their larger concerns about the future of the sites, possible health issues related to the sites, and the condition of the water supply. Many of the interviewees expressed interest in “redevelopment [of the sites area] into something useful” for the community. One interviewee requested more data regarding the exact contaminants threatening the groundwater and one interviewee expressed concern for the drinking water. Environmental and health concerns expressed by the interviewees spanned a variety of topics. Specific concerns noted by the interviewees included:

- Would the contaminated groundwater be an issue for drinking or irrigation water supplies?
- What would the effects on the water quality be?
- Would building on the sites take into consideration all environmental issues?
- Would the contamination harm property values, future development, and/or traffic?
- How toxic are the sites and how does it affect those living around the sites?
- Are the sites safe to live in?

Almost all of the interviewees wanted to know about the overall remedy for the sites, as well as future investigations and a timeline for eventual cleanup.

---

3 It appears that some interviewees were under the impression that the property was publicly owned.
B. Outreach and Other Concerns

Interviewees provided the following feedback and suggestions on current and future outreach pertaining to the 7th Avenue and Bethany Home Road and Central and Camelback WQARF sites:

- Interviewees stated that they received information on the WQARF sites primarily from U.S. Mail and email notices, with some interviewees noting information obtained from local newspapers.

- Suggestions for other methods of communication included:
  - Communication with neighborhood associations,
  - Articles in local newspapers, and
  - Telephone calls.

- One interviewee suggested a meeting summary published in the *North Central News*.

- Several interviewees suggested holding the CAB meetings closer to the WQARF sites and their associated neighborhoods.

C. Response to Community Issues and Concerns

ADEQ uses the information gathered from community interviews, CAB and public meetings, and direct contact to ensure that future outreach activities and materials are able to address community questions and concerns as well as keep the community informed of WQARF site activities. Additionally, community feedback informs ADEQ outreach practices and allows the communication techniques noted in Chapter 4, Section B to be tailored to the specific needs of the community.
Chapter 4 – Community Involvement Action Plan

In addition to providing the framework for the state to investigate and clean up contaminated sites, the WQARF program also requires that ADEQ involve the community in the cleanup process. The following Community Involvement Action Summary table describes the required community involvement activities according to each WQARF phase and illustrates where the Central Phoenix WQARF sites are in the WQARF process at the time of this writing. This summary is followed by a description of the communications vehicles and techniques available for use. Multiple techniques to communicate with and educate the public may be used throughout the process of remediating the WQARF sites.

A. Community Involvement Action Summary – Required Activities

The following Community Involvement Action Summary table describes the required community involvement actions for the Central Phoenix WQARF sites and notes what actions have been completed to date. The Community Involvement Action Summary table is color coded to match the WQARF process flow chart in the CIP Introduction.

B. Community Involvement Action Summary – Communication Techniques

As previously described in the Community Involvement Action Summary table, there are required communications activities for every phase of the WQARF process. This section describes the specific activities and resources ADEQ uses and has available to communicate with, educate, and help the community and stakeholders be actively involved in the Central Phoenix WQARF sites.

ADEQ will continue to use the following resources to keep stakeholders informed throughout the process:

1. **CAB** – The Central and Camelback CAB has been meeting since 2000. The 7th Avenue and Bethany Home Road CAB has been meeting since May 2010. The 7th Avenue and Bethany Home Road and Central and Camelback CABs merged on August 20, 2013. The 16th Street and Camelback CAB joined with these on July 23, 2014 and the name of the CAB was changed to the Central Phoenix Sites CAB. The 7th Street and Missouri Avenue CAB, merged into the Central Phoenix Sites CAB in August 2016. CAB members advise ADEQ on appropriate means of delivering site information as well as provide input regarding content. CAB members also serve as an information resource for their community. CAB meetings are held at a location and date mutually agreed upon by the CAB members and an ADEQ representative. Care is taken to ensure the location is easily accessible for the public to attend. For a list of CAB members, see Appendix D.

2. **Local Print Media** – ADEQ will publish all WQARF milestone public notices in the *Arizona Business Gazette*, which has a search function for public notices ([http://archive.azcentral.com/class/azbjnotices.html](http://archive.azcentral.com/class/azbjnotices.html)). For a list of other media outlets, see Appendix G.

3. **U.S. Mail and Email Lists** – ADEQ maintains U.S. Mail and email address lists for the Central Phoenix WQARF sites. Mailing list addresses are compiled and updated on an ongoing basis through CIP updates, as are return mailers from fact sheets, CABs, open houses, public meeting attendance lists, and individual requests. These distribution lists include CAB members, local and state elected and appointed officials, neighborhood and homeowner association contacts, schools and vulnerable population centers representing/located within the sites’ community involvement areas (see Appendices B through D), as well as other interested parties.

4. **ADEQ Website** – ADEQ’s website provides visitors with three areas of information related to the sites and is updated on an ongoing basis:

   - Notices Page – The notices page provides information regarding WQARF site public notices and comment periods ([http://azdeq.gov/notices](http://azdeq.gov/notices)). This information can also be found on the WQARF site information pages.
• Events Page – The events page provides information regarding WQARF site public meetings, including CAB meetings ([http://www.azdeq.gov/events](http://www.azdeq.gov/events)). This information can also be found on the WQARF site information pages.

• WQARF Site Information Pages – The WQARF site information pages provide detailed site information and access to the online information repositories for the WQARF sites, which include milestone documents.
  o 7th Avenue and Bethany Home Road ([http://www.azdeq.gov/node/323](http://www.azdeq.gov/node/323))
  o 7th Street and Missouri Avenue ([http://www.azdeq.gov/node/1120](http://www.azdeq.gov/node/1120))
  o 16th Street and Camelback ([http://www.azdeq.gov/node/809](http://www.azdeq.gov/node/809))
  o Central and Camelback ([http://www.azdeq.gov/node/829](http://www.azdeq.gov/node/829))

5. ADEQ Notice Board – Notice boards are located in ADEQ’s Phoenix and Tucson offices.

6. Public Meetings – Public meetings or open houses, beyond the CAB meetings, may be scheduled and conducted as needed and as determined by ADEQ and the CAB (for example, meetings with neighborhood/homeowners’ associations, schools or other community groups).

7. Site Tours – Tours of the sites may be requested and arranged in conjunction with the property owners and in compliance with current laws and regulations by contacting the ADEQ Community Involvement Coordinator.

The following table of Communication Techniques illustrates how these techniques have and will be used throughout the WQARF process for the Central Phoenix WQARF sites.

C. Other Resources and Contacts

In addition to the designated spokesperson and information repository identified at the beginning of this CIP, the appendices included in this CIP provide additional resources and contact information for the public to use as desired.

- **Appendix A** provides a history of major activities by year at the Central Phoenix WQARF sites.

- **Appendix B** provides a list of targeted communities in the Central Phoenix WQARF sites community involvement areas. These include neighborhood associations, community schools, and vulnerable population centers that are in or near the community involvement areas.

- **Appendix C** provides a table of local and state elected officials, by ward or district, who represent communities within the community involvement areas. Note that some wards or districts may encompass more of the community involvement areas than others.

- **Appendix D** provides a table of the Central Phoenix WQARF sites CAB members.

- **Appendix E** provides a list of parties that have requested, and received, prospective purchaser agreements from ADEQ for property in and around the Central Phoenix WQARF sites.

- **Appendix F** provides a list of parties that have consent decree settlements with ADEQ pertaining to the Central Phoenix WQARF sites.

- **Appendix G** provides a list of media outlets in the area. All future public notices for the Central Phoenix WQARF sites can be found by searching the *Arizona Business Gazette* publication ([http://archive.azcentral.com/class/azbjnotices.html](http://archive.azcentral.com/class/azbjnotices.html)).

- **Appendix H** provides a list of other related state and local agencies that may be of interest to the public.
Appendix A – Site Histories

The following presents site histories in chronological order for the Arizona Department of Environmental Quality (ADEQ) Central Phoenix Water Quality Assurance Revolving Fund (WQARF) sites.

7th Avenue and Bethany Home Road

1952–1960 The site property was originally developed in 1952 into a small shopping center, which included a market, a variety of commercial shops, and a dry cleaning facility. The dry cleaning facility began operation in 1955. The shopping center was connected to an on-site septic system. In 1960 the shopping center was connected to the Phoenix sewer system and discharges to the septic system are thought to have ended.

1995–2001 Three site investigations were completed by outside parties and confirmed the presence of tetrachloroethene (PCE) contamination in soil and groundwater at the site.

2004 In August, the site was placed on the WQARF Registry based on the detection of PCE in the soil and groundwater. Concentrations were found to be as high as 15,000 micrograms per liter (µg/L) in groundwater beneath the northeast corner of the site, exceeding the Arizona Aquifer Water Quality Standard (AWQS) for PCE of 5.0 µg/L. The eligibility and evaluation score for placement on the WQARF Registry was 29 out of 120. In October, ADEQ initiated an early response action (ERA) evaluation on the site to collect data necessary to characterize the source area of PCE contamination beneath the site. The ERA evaluation consisted of drilling 10 soil borings and installing 5 soil vapor extraction (SVE) wells and 2 groundwater monitoring wells at the site.
7th Avenue and Bethany Home Road (continued)

2005–2007  In September 2005, three off-site groundwater monitoring wells were installed to help define the extent of groundwater contamination. Based on the results of the ERA investigation, an SVE system was installed at the site. The SVE system was in operation from June 2005 to January 2006, when use was discontinued. During operation of the system, approximately 380 pounds of PCE were removed from the subsurface soils. In April 2006, a rebound test was conducted to determine if the volatile organic compounds (VOCs) remaining in the soil warranted further operation of the system. The results of this test indicated there were not enough extractable VOCs remaining in the soils to warrant further operation of the system. In October 2006, confirmation borings were drilled and sampled in the areas of the SVE system. These samples confirmed the concentrations of PCE remaining in the soils were below residential soil remediation standards and groundwater protection levels. In April 2007, the SVE system was decommissioned.

2008  ADEQ initiated an investigation of an additional dry cleaner that operated at 6022 North 7th Avenue from the 1960s to approximately 1990. Field investigations in the early 1990s indicated a release of PCE from this dry cleaner, but the impact to the groundwater was not evaluated at the time. In March, two monitoring wells were installed on and near the property, and four additional borings were drilled and sampled adjacent to the building that housed the dry cleaner. Results of the investigation indicated that PCE had been released to the groundwater beneath the site. Concentrations of PCE ranged from 8.0 to 24 µg/L. Trichloroethene (TCE) and vinyl chloride were also detected at levels above their respective AWQS limits.

2009  In January, ADEQ initiated the Remedial Investigation process. The outline of the community involvement plan and the scope of work for the Remedial Investigation were completed.

2010  In April, the Draft Remedial Investigation Report was released for public comment, and comments on the Remedial Objectives were solicited from the public in September. In November, one round of groundwater sampling of site monitoring wells was completed, and the results indicated that the plume was continuing to move to the north.
2011–2012 In April 2011, the Final Remedial Investigation Report was released and included the Remedial Objectives for the site. In May 2011, ADEQ initiated the Feasibility Study process, and the Final Feasibility Study was delivered to ADEQ in November 2012. The Feasibility Study recommended enhanced reductive dechlorination as the final remedy at the site. In January 2012, a round of groundwater sampling of the site monitoring wells was completed. Contaminant concentrations detected in the monitoring wells were generally higher than those detected in September 2010. PCE was detected at a maximum concentration of 2,300 µg/L in monitoring well MW-4, which is located near the source area. TCE and vinyl chloride were detected in monitoring well MW-12 at concentrations of 18 and 2.5 µg/L, respectively. Monitoring well MW-12 is located west of the main source area in a smaller source area associated with the former dry cleaner located at 6022 North 7th Avenue. The AWQS limits for TCE and vinyl chloride are 5 and 2 µg/L, respectively.

2013 In April 2013, ADEQ initiated the pilot test for enhanced reductive dechlorination at the site. To complete definition of the plume and add additional monitoring wells for the pilot test, ADEQ installed seven monitoring wells and two injection wells at the site. During the initial pilot test injection, approximately 40,000 gallons of molasses were injected into the aquifer. One round of groundwater sampling was conducted from the 18 wells at the site. Concentrations detected in the monitoring wells were slightly lower than those detected in January 2012. PCE was detected at a maximum concentration of 1,400 µg/L in monitoring well MW-4, located near the source area. TCE and vinyl chloride were detected in monitoring well MW-12 at concentrations of 18 and 2.3 µg/L, respectively. In August 2013, the initial performance samples collected from the aquifer indicated enhanced reductive dechlorination was occurring in an area within 15 feet of the injection wells. In the 1-year pilot test, PCE concentrations in the monitoring wells in the treatment area were reduced from concentrations as high as 550 µg/L to less than 1 µg/L.

2014 In March 2014, one round of groundwater samples was collected from the 18 wells at the site. Concentrations detected in the monitoring wells were generally slightly lower than those detected in April 2013. PCE was detected at a maximum concentration of 1,000 µg/L in monitoring well MW-4, which is located near the source area. Outside the treatment area, TCE and vinyl chloride were also detected in monitoring well MW-12 at concentrations of 13 µg/L and 1.5 µg/L, respectively. Monitoring well MW-12 is located west of the main source area in a source area associated with the former dry cleaner located at 6022 North 7th Avenue. The AWQS limits for TCE and vinyl chloride are 5 and 2 µg/L, respectively. If funding allows, ADEQ intends to move forward with the full-scale enhanced reductive dechlorination treatment.
7th Avenue and Bethany Home Road (concluded)

2015 On April 23, ADEQ provided public notice that the Proposed Remedial Action Plan was completed and a 30-day public comment period for the plan was initiated.

2016 On June 30, 2016, ADEQ issued a Record of Decision for the 7th Avenue and Bethany Home Road WQARF site. The Record of Decision provides a description of the remedy, a responsiveness summary regarding all comments received on the Proposed Remedial Action Plan, a timeline for completing the remedy, and a total estimated cost.

7th Street and Missouri Avenue

2000 In early 2000, PCE and TCE were detected in groundwater samples from several monitoring wells in the area of 7th Street and Missouri Avenue. PCE was also detected above AWQS in a nearby Salt River Project irrigation well.

2008 ADEQ conducted a soil vapor survey in the area to try to determine the potential source of the PCE and TCE.

2010 Based on the results of the soil vapor survey, ADEQ installed monitoring wells around the Fashion Cleaners facility located at 736 East Missouri Avenue. PCE has been detected above AWQS in the monitoring well immediately downgradient of Fashion Cleaners.

2013 ADEQ installed additional monitoring wells in the area of the former Kino Drapery Cleaners, previously located at 5340 North 7th Street. Groundwater monitoring results suggested there was a release of PCE at this location as well. A groundwater monitoring well was installed upgradient of the former Kino Drapery Cleaners and results from this well indicated no upgradient source of PCE.

2014 ADEQ collected soil and soil vapor samples from beneath the building located at the southwest corner of 7th Street and Missouri Avenue where Kino Drapery Cleaners formerly operated. Results indicated that a release of PCE had occurred to the subsurface from this location.

2016 On June 24, the site was added to the WQARF Registry with an eligibility and evaluation score of 42 out of a possible 120.
16th Street and Camelback

1994  In January, a Consent Decree was signed between Bank One and ADEQ. Bank One paid a settlement to ADEQ to be used for the investigation and cleanup of the property. Six monitoring wells were installed.

1995  ADEQ conducted a soil vapor survey. PCE concentrations were detected in soil at levels ranging from 1.3 to 2.3 µg/L.

1996  ADEQ installed four additional permanent groundwater monitoring wells and four temporary groundwater well points.

1999  On April 21, the site was added to the WQARF Registry with an eligibility and evaluation score of 23 out of a possible 120.

2002  In May, ADEQ began an ERA evaluation at the site. The ERA evaluation was designed to determine if a combination of SVE and air sparge remediation could provide source control and remediate the PCE groundwater contamination.

2003  In January, ADEQ installed two vapor extraction wells, one sparge point, and two observation wells. A pilot study was conducted to determine the feasibility of installing a vapor extraction/air sparge remediation system. In April, ADEQ received the results from the pilot study and requested that an ERA completion report be prepared. The results of the pilot study indicated that installation of a remediation system at the site would not be feasible or cost effective.

2004–2006  The ERA completion report requested by ADEQ was completed. Groundwater monitoring of the well network at the site continued, with 13 wells being sampled. Passive diffusion bags were used at the site beginning with the 2004 first quarter sampling event because the depth to groundwater had increased.

In January 2004, ADEQ installed an additional monitoring well (MW-12) on the southwest corner of 16th Street and Camelback Road. The well was to aid in defining the downgradient extent of PCE contamination. In April 2006, due to declining water levels, ADEQ installed monitoring well MW-3A to replace well MW-3. Monitoring well MW-3A was installed to collect contamination data from the source area of the southern plume.

</table>
Central and Camelback

1999  In January, the Southwest Corner Source Area (SCSA) portion of the site was placed on the WQARF Registry due to the detection of PCE in groundwater. Concentrations were found to be as high as 20,000 parts per billion. The eligibility and evaluation score for placement on the WQARF Registry was 31 out of 120.

2000  In June, the Central and Camelback site, inclusive of the SCSA, was listed on the WQARF Registry with a score of 32 out of 120.

2001  ADEQ initiated an ERA for the SCSA portion of the site to remediate groundwater contamination and control the migration of contamination into an underground parking garage located on the southeast corner of Central Avenue and Camelback Road. The ERA consisted of the installation of four groundwater extraction wells, which was completed in December.

2003  On January 22, the groundwater remediation system located at 21 West Camelback Road began pumping and treating contaminated groundwater at a rate of approximately 90 gallons per minute. The treatment system removed VOCs by passing the contaminated groundwater through granular activated carbon. The treated water was discharged primarily to the Salt River Project Grand Canal and, during canal dry-out periods, to the City of Phoenix sanitary sewer. Periodic sampling of the effluent was conducted to ensure that the treated water complied with discharge standards. Eleven groundwater monitoring wells were installed to delineate the extent of the PCE plume.

2004  In June, an ERA evaluation of the Maroney’s Dry Cleaners facility located at 4902 North Central Avenue was conducted. Four nested soil vapor wells and one groundwater monitoring well were installed during the ERA evaluation.

2005  In January, based on the results of the ERA evaluation, an SVE pilot test was conducted and SVE was chosen as an effective remedy for the subsurface soil contamination at the former Maroney’s facility.

Groundwater samples from wells at the former Texaco station located at the corner of Central Avenue and East Colter Street were found to contain PCE.
Central and Camelback (continued)

2006
Two new wells were drilled at Medlock Drive and Orange Street to delineate the northern portion of the plume. ADEQ took over ownership of three City of Phoenix wells at the SCSA.

2007
ADEQ began the Remedial Investigation to determine the nature and extent of the contamination at the site. Three new wells were drilled, two south of the site on Pierson Street and one on private property at 15 West Camelback Road near the former Weiss Guys Car Wash location. In November, the SVE system began operating.

2008
In May, ADEQ installed two groundwater monitoring wells. ADEQ detected increasing levels of PCE in monitoring well CC-11 on East Orange Drive and in the Texaco wells at 5201 North Central Avenue.

2009
At the end of June, the SVE operational schedule was changed to monitor the rebound of contaminant vapors in the subsurface. The system alternatively would operate for 2 weeks and then be shut down for 2 weeks.

2010
In early January, the groundwater treatment system was shut down because it could not discharge to the Grand Canal while the canal was being dried out and cleaned. The system remained offline until early March due to budget constraints. The system was operated continuously after startup in March with two of the four extraction wells in operation. The SVE system continued to operate on a 2-week-on, 2-week-off schedule. The SVE system was turned off from the beginning of July to early September during the fiscal year 2011 contract negotiation period.

2011
In January, the groundwater remediation system was again shut down because it could not discharge to the Grand Canal while the canal was being dried out and cleaned. The system remained offline until early March to allow for minor repairs, calibrations, and upgrades. The system was operated continuously, after startup, with two of the four extraction wells in operation. The SVE system was operated on a 2-week-on, 2-week-off schedule, until December, when the system was operated continuously. A soil gas investigation was conducted in the area of the former Maroney’s Dry Cleaners building, and a nested soil gas extraction well was installed.

2012
Multiple permits were renewed for the continued operation of the SVE system. A City of Phoenix Wastewater Discharge Permit (Permit Number 0710-021409) was terminated because groundwater treatment system no longer discharged wastewater to the City of Phoenix sewer system. The groundwater remediation system operated continuously, with two of the four extraction wells in operation until June. A soil gas extraction pilot test was conducted at the recently installed soil gas extraction well at Maroney’s Dry Cleaners. The extraction well was connected to the SVE system after the Maricopa County Air Quality Department approved the required permit modification.
Central and Camelback (concluded)

2013  Pumping equipment was removed from groundwater extraction well EW-1 and installed in monitoring well CC-5 because of sand infiltration problems with EW-1. The SVE was then operated full time with two extraction wells. A passive soil gas survey was conducted along Central Avenue, north of Camelback Road, to investigate possible releases that may have contributed to the groundwater plume in that area. Two groundwater monitoring wells were installed north of Camelback Road to better define the extent of the groundwater contaminant plume.

2014  The groundwater remediation and treatment system and the SVE system were operated full time, with the exception of shutdown for minor repairs and granular activated carbon change out. ADEQ conducted a sewer line video investigation and a soil investigation, and installed a groundwater monitoring well to conclude the investigation of possible additional sources for the northern contaminant plume. A Draft Remedial Investigation Report and Proposed Remedial Objective Report were completed and presented for public comment.

2015  The groundwater remediation and treatment system and the SVE system were operated full time with the exception of shutdown for Salt River Project canal cleanup and minor repairs. The Feasibility Study Work Plan and Feasibility Study Report were completed.
Appendix B – Targeted Communities

A. Neighborhood Associations

The following presents neighborhood associations and their respective points of contact in the Central Phoenix Water Quality Assurance Revolving Fund (WQARF) sites community involvement areas.¹

7TH AVENUE AND BETHANY HOME ROAD

**Desert Horizon Precinct Block Watch**²
Matt Makinster, 16030 N. 56th St., Scottsdale, AZ 85254  
(602) 495-5006

**Saint Francis Xavier School**
4715 N. Central Ave., Phoenix, AZ 85012
(602) 266-5364

**Xavier College Preparatory**
4710 N. 5th St., Phoenix, AZ 85012
(602) 277-3772
C. **Vulnerable Population Centers**

The following list presents a list of vulnerable population centers, including places such as child care and assisted living facilities, in the Central Phoenix WQARF sites community involvement areas. No vulnerable population centers were located within the 16th Street and Camelback WQARF site community involvement area.

**7TH AVENUE AND BETHANY HOME ROAD**

- **Marian Adult Care Home**
  1002 W. Rose Ln., Phoenix, AZ 85013
  (602) 433-9102

- **Stella Lane Adult Care Home**
  531 W. Stella Ln., Phoenix, AZ 85013
  (602) 441-4696

**7TH STREET AND MISSOURI AVENUE**

- **Constant Care Assisted Living, North Central**
  5247 N. 6th St., Phoenix, AZ 85012
  (602) 803-5642

- **The Gathering Place Children’s Academy**
  5536 N. 6th St., Phoenix, AZ 85012
  (602) 230-1588

- **Kinder Land**
  624 E. Missouri Ave., Phoenix, AZ 85012
  (602) 240-6933

- **Person to Person Assisted Living Care Home**
  602 E. Missouri Ave., Phoenix, AZ 85012
  (602) 579-6482

**CENTRAL AND CAMELBACK**

- **Razinn Care Campus**
  37 W. Pasadena Ave., Phoenix, AZ 85013
  (602) 803-9575
This page was intentionally left blank.
As of the publication of this community involvement plan, the 2018 community involvement areas for the Central Phoenix Water Quality Assurance Revolving Fund sites falls under Phoenix City Council Districts 4, 5, and 6; Maricopa County Supervisiorial District 3; and Arizona Legislature Districts 24 and 28. Due to the election in November 2018 many contacts were blank.

Appendix E – Prospective Purchaser Agreements

The following table presents a list of parties that have requested and received prospective purchaser agreements from the Arizona Department of Environmental Quality for properties in or around the Central Phoenix Water Quality Assurance Revolving Fund (WQARF) sites as of November 2018. Prospective purchaser agreements have only been requested for the Central and Camelback WQARF site. The table includes purchaser name, property location, the date that public notices for these agreements were issued, and the dates these agreements became effective.

Appendix F – Settlements

The following table presents a list of parties that have entered into consent decree settlements with the Arizona Department of Environmental Quality for properties in or around the Central Phoenix Water Quality Assurance Revolving Fund (WQARF) sites as of November 2018. A consent decree settlement was located for both the 7th Avenue and Bethany Home Road and 16th Street and Camelback WQARF sites. The table includes party name, the date the consent decree was signed by the judge, and the date that public notices for these settlements were issued.

Appendix G – Media Outlets

The following list presents Phoenix media outlets that may be used by the public and Community Advisory Board members to promote information on the Central Phoenix Water Quality Assurance Revolving Fund sites. The *Arizona Business Gazette* is the external media outlet that the Arizona Department of Environmental Quality uses to publish all public notices related to the sites.

A. Newspapers and Magazines

**The Arcadia News**
3850 E. Indian School Rd., Phoenix, AZ 85018

**The Arizona Business Gazette**
200 E. Van Buren St., Phoenix, AZ 85004

**The Arizona Republic**
200 E. Van Buren St, Phoenix, AZ 85004

**The Camelback Corridor News**
3104 E. Camelback Rd., Phoenix, AZ 85016

**East Valley Tribune**
1620 W. Fountainhead Pky., Ste. 219, Tempe, AZ 85282

**La Voz**
200 E. Van Buren St., Phoenix, AZ 85004

**North Central News**
5308 N. 12th St., Ste., 402, Phoenix, AZ 85014

B. Radio

**Arizona News Radio Network**
*(Arizona news and sports to 30 stations)*
14605 N. Airport Dr., Ste. 370, Scottsdale, AZ 85260

**Bonneville International Corporation**
*(KMVP, KMVP-FM, KTAR, KTAR-FM)*
7740 N. 16th St., Ste. 200, Phoenix, AZ 85020

**CBS Radio Stations, Inc.**
*(KMLE, KOOL-FM, KZON)*
840 N. Central Ave., Phoenix, AZ 85014
B. Radio (Continued)

Clear Channel Communications
(KESZ, KFYI, KGME, KNIX-FM, KMXP, KTZR, KXEW, KYOT-FM, KZZP)
4686 E. Van Buren St., Ste. 300, Phoenix, AZ 85008

Maricopa County Community College District
(KBAQ, KJZZ)
2323 W. 14th St., Tempe, AZ 85281

Phoenix FCC License Sub, LLC
(KAZG, KDKB, KDUS, KSLX-FM, KUPD)
1900 W. Carmen St., Tempe, AZ 85283

Riviera Broadcasting Co.
(KEXX, KKFR, KMVA, KOAI)
4745 N. 7th St., Ste. 410, Phoenix, AZ 85014

Sierra H. Broadcasting, Inc.
(KAJM, KNJR)
1710 E. Indian School Rd., Ste. 205, Phoenix, AZ 85016

Univision Radio License Corporation
(KHOT-FM, KNOV-FM, KKM, KOMR, KQMR)
4745 N. 7th St., Ste. 140, Phoenix, AZ 85014

C. Television

KAET Channel 8 (PBS)
555 N. Central Ave., Ste. 500, Phoenix, AZ 85004

KNXV Channel 15 (ABC)
515 N. 44th St., Phoenix, AZ 85008

KPHO Channel 5 (CBS)
4016 N. Black Canyon Hwy., Phoenix, AZ 85017

KPNX Channel 12 (NBC)
200 E. Van Buren St., Phoenix, AZ 85004

KSAZ Channel 10 (FOX)
511 W. Adams St., Phoenix, AZ 85003

KTAZ Channel 39 (Telemundo)
4625 S. 33rd Pl., Phoenix, AZ 85040

KTVW Channel 33 (Univision)
6006 S. 30th St., Phoenix, AZ 85042
Appendix H – Related Agencies and Contact Information

The following list presents additional resources that may be used by the public and Community Advisory Board members to address concerns or questions related to the Central Phoenix Water Quality Assurance Revolving Fund sites.

A. State of Arizona

Arizona Department of Agriculture
1688 W. Adams St.
Phoenix, AZ 85007
Phone: (602) 542-4373

Arizona Department of Health Services
150 N. 18th Ave.
Phoenix, AZ 85007
Phone: (602) 542-1025

Arizona Department of Water Resources
Groundwater Permitting and Wells Section
1110 W. Washington, Suite #310
Phoenix, AZ 85007
Phone: (602) 771-8527

B. City of Phoenix

City of Phoenix Housing Department
251 W. Washington St., 4th Floor
Phoenix, AZ 85003
Phone: (602) 262-6794

City of Phoenix Water Services Department
305 W. Washington St., Ste. 200
Phoenix, AZ 85003
Phone: (602) 262-6251

City of Phoenix Public Works Department
Garbage and Recycling
200 W. Washington St., 7th Floor
Phoenix, AZ 85003
Phone: (602) 262-7251
C. Other

Agency for Toxic Substances and Disease Registry
Western Branch – Region 9
75 Hawthorne St.
Ste. 100, M/S:HHS-1
San Francisco, CA 94105
Phone: (800) 232-4636
Consumer Information Line: (800) 223-0618

Real Estate Seller Disclosures
Arizona Department of Real Estate
Phone: (602) 771-7799
https://www.aaronline.com/

Salt River Project
1521 N. Project Dr.
Tempe, AZ 85281
Phone: (602) 236-3333
http://www.srpnet.com/contactus/default.aspx
Acronyms and Glossary of Terms

1,2-Dichloroethane (1,2-DCA): A colorless liquid used as a solvent for plastics, oils and fats, as a degreaser, as a fumigant in insecticide sprays, in halon fire extinguishers, and in cementing of rubber.

Aquifer: An underground rock formation composed of such materials as sand, soil, or gravel, that can store groundwater and supply it to wells and springs. In aquifers, groundwater occurs in sufficient quantities to be used for drinking water, irrigation, and other purposes.

Aquifer Water Quality Standard (AWQS): State of Arizona maximum levels for contaminants that apply to groundwater in aquifers designated for drinking water use. For example, the AWQS for tetrachloroethene (PCE) is 5 micrograms per liter (µg/L).

Arizona Administrative Code (A.A.C.): is where the official rules of the State of Arizona are published. The Code is the official compilation of rules that govern state agencies, boards, and commissions.

Arizona Department of Environmental Quality (ADEQ): ADEQ is the executive agency of the Arizona State Government mandated to enforce and administer the state’s environmental laws and regulations.

Cleanup: Actions taken that deal with a release or threat of a release of hazardous substances that could adversely affect public health and/or the environment. The word “cleanup” is sometimes used interchangeably with the terms remedial action, removal action, response action, remedy, remediation, or corrective action.

Community Advisory Board (CAB): A diverse group of community members interested in or affected by the presence of a Water Quality Assurance Revolving Fund (WQARF) site. By statute, ADEQ is required to form a CAB for each WQARF Registry site where ADEQ is initiating a Remedial Investigation. ADEQ seeks the CAB’s input in the decision-making process and works with them from the onset of the Remedial Investigation/Feasibility Study process until the requirements of the Record of Decision have been fulfilled.

Community Involvement Area: The mailing area of residences and businesses used in the notification for public meetings and other written notices regarding a site.

Community Involvement Coordinator: The ADEQ employee responsible for ensuring that all statutes and rules related to the involvement of the public and public outreach at WQARF sites are upheld and complied with by ADEQ. Community Involvement Coordinators manage and coordinate the work of CABs for WQARF sites.

Community Involvement Plan (CIP): A document that identifies techniques used by ADEQ to communicate effectively with the public during the WQARF cleanup process at a specific site.
This plan describes the site history, nature and history of community involvement, and concerns expressed during community interviews. In addition, the plan outlines methodologies and timing for continued interaction between the agencies and the public at the site.

**Contamination:** Any hazardous or regulated substance released into the environment.

**Contaminant:** Any physical, chemical, biological or radiological substance or matter present in any media at concentrations that may result in adverse effects on air, water or soil. A harmful or hazardous matter introduced into the environment that is not normally found there, or not naturally occurring.

**Early Response Action (ERA):** Refers to a remedial action performed prior to the final remedy, and often prior to the Remedial Investigation. An ERA addresses current risks to public health, welfare, and the environment; protects or provides a supply of water; addresses sources of contamination; or controls or contains contamination where such actions are expected to reduce the scope or cost of the remedy needed at the site. Also referred to as an interim remedial action.

**Feasibility Study (FS):** A process to identify a reference remedy and alternative remedies that appear to be capable of achieving the Remedial Objectives for the site. It is often done as part of a two-phase investigation in conjunction with a Remedial Investigation.

**Granular Activated Carbon (GAC):** Treatment process used to remove dissolved contaminants from water by absorption.

**Groundwater:** Water located beneath the ground surface in soil pore spaces and in the fractures of geologic formations. A formation of rock or soil is called an aquifer when it can yield a usable quantity of water.

**Hazardous Substance:** Any material that, because of its quantity, concentration, physical or chemical characteristics, poses a significant present or potential hazard to human health and safety or to the environment.

**Information Repository:** A collection of documents about a specific project. Information on certain WQARF sites may be available at ADEQ offices and libraries throughout the state.

**Methyl Tertiary Butyl Ether (MTBE):** A colorless liquid that is a derivative of fossil fuels.

**Monitoring Wells (Monitor Wells):** Wells installed for the purpose of collecting samples such as groundwater and soil vapor. Analytical results from samples are used to characterize the extent of contamination, the direction of groundwater flow, and the types and quantities of contaminants present in the groundwater.

**Operation and Maintenance (O&M):** 1. Activities conducted after a WQARF site action is completed to ensure that the action is effective. 2. Actions taken after construction to ensure that facilities constructed to treat wastewater will be properly operated and maintained to achieve normative efficiency levels and prescribed effluent limitations in an optimum manner. 3. On-going
asbestos management plan in a school or other public building, including regular inspections, various methods of maintaining asbestos in place, and removal when necessary.

**Plume**: A well-defined area of contamination in groundwater, soil or the air, often used to describe the dispersion of contamination in soil and/or groundwater.

**Potentially Responsible Party (PRP)**: Those parties (individuals, corporations) identified as potentially liable for cleanup costs at a contaminated site.

**Preliminary Investigation (PI)**: The process of collecting and reviewing available information about a known or suspected hazardous waste site or release.

**Proposed Remedial Action Plan (PRAP)**: A document that reviews the cleanup alternatives presented in the site FS and identifies ADEQ’s preferred alternative. Selection of a preferred alternative is not a closed-end commitment to use that alternative; rather, it is a way for the agency to indicate, based on experience and expertise, which alternative is the most likely course of action. ADEQ must actively solicit public review of and comment on all the alternatives under consideration.

**Public Comment Period**: A period during which the public can formally review and comment on various documents and ADEQ actions.

**Record of Decision (ROD)**: A legal document that announces and explains the cleanup methods ADEQ will use at a WQARF site. The Record of Decision is based on information and technical analysis generated during the Remedial Investigation and Feasibility Study, and on consideration of comments received during the public comment record for the Proposed Remedial Action Plan.

**Remedial Action (RA)**: Any action taken to investigate, monitor, assess and evaluate the release or threat of release of hazardous substances or contaminants to the environment. It may also refer to the actual “cleanup” of the environment by various removal, treatment, monitored remediation, or corrective actions. The term “cleanup” is sometimes used interchangeably with the terms remedial action, removal action, response action, remedy, remediation, or corrective action.

**Remedial Investigation (RI)**: Establishes the nature and extent of the contamination and the sources; identifies current and potential impacts to public health, welfare, and the environment; identifies current and reasonable foreseeable uses of land and waters of the state; and obtains and evaluates any information necessary for identification and comparison of alternative remedial actions.

**Remedial Objective (RO)**: Established remedial goals for the current and reasonably foreseeable uses of lands and waters of the state that have been or are threatened to be affected by a release of hazardous substance.

**Remediation**: Cleanup or other methods used to remove or contain a toxic spill or hazardous materials.
Remedy: Cleanup method chosen for a site.

Responsible Party: An individual or company (e.g., an owner, operator, transporter, or generator of hazardous waste) that is responsible for the contamination at a WQARF site. Whenever possible, responsible parties are required to clean up hazardous waste sites they have contaminated.

Responsiveness Summary: A summary of oral and written comments (and ADEQ responses to those comments) received during the public comment period.

Soil Vapor Extraction (SVE): Soil vapor extraction removes contaminant vapors from below ground for treatment above ground. Soil vapor extraction removes vapors from the soil above the water table by applying a vacuum to pull the vapors out. The method is used for chemicals that evaporate easily – such as those found in solvents and gasoline.

Superfund: The program operated under the legislative authority of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) and the Superfund Amendments and Reauthorization Act (SARA) that funds and carries out U.S. Environmental Protection Agency solid waste emergency and long-term removal and remedial activities. These activities include establishing the National Priorities List, investigating sites for inclusion on the list, determining their priority, and conducting and/or supervising cleanup and other remedial actions. It provides for the cleanup of hazardous substances released into the environment, regardless of fault. The term Superfund also is used to refer to cleanup programs designed and conducted under CERCLA and its subsequent amendments.

Tetrachloroethene or Tetrachloroethylene or Perchloroethene (PCE): A clear, colorless, liquid with a chloroform or sweet odor and a low boiling point; a solvent used for dry cleaning; degreasing and drying metals and other solids; dissolving waxes, greases, oils, fats, and gums; and in other industrial applications. PCE is a potential occupational carcinogen. Evaporation of PCE increases as temperature increases.

Trichloroethene or Trichloroethylene (TCE): A colorless liquid used as a solvent, metal degreasing agent, and in other industrial applications.

Volatile Organic Compounds (VOC): A large group of carbon-containing compounds that are easily dissolved into water, soil, or the atmosphere and evaporate readily at room temperature. Examples of VOCs include PCE, TCE, benzene, toluene, ethylbenzene, and xylene. These contaminants are typically generated from metal degreasing, printed circuit board cleaning, gasoline, and wood preserving processes.

Water Quality Assurance Revolving Fund (WQARF): Also known as the State Superfund. WQARF is the program and funding that is used to address hazardous substance releases within the state that are not covered by other specific programs.
