

Smoke Synopsis

Today, we are forecasting smoke to move toward the northeast with moderate to, at times, heavy impacts possible in Globe-Miami due to the proximity to the fire. As smoke continues to disperse toward the northeast, moderate smoke impacts are likely this afternoon in places further north-northeast of the fire, including areas in/around Whiteriver, Cibecue, Show Low, Snowflake, and Eagar. Overnight, moderate to heavy impacts are possible in Globe-Miami, with moderate impacts forecast in Peridot/San Carlos. Only expecting light impacts in Superior today into tonight as the most active portion of the fire is now east of the region.

If you are in an area with heavy impacts, the suggested actions to take are (if possible): close windows and use fans or alternative cooling devices, turn off swamp coolers, use filtered HVAC systems, and avoid outdoor activities.

Tomorrow, there will be a slightly more westerly component, so the smoke is expected to disperse more toward the ENE.
