4.0	DEFINITIONS	18
5.0	APPLICATION ADMINISTRATIVE COMPLETENESS CHECKLIST	33

SECTION 1.0 - GENERAL INFORMATION

1.1 OPPORTUNITIES TO CONSULT

The Department is available for consultation meetings. For complex and time-sensitive projects, it is strongly recommended that facilities request a pre-application meeting where discussions can focus on timeline expectations and application components necessary for processing of the permit.

Additionally, the Department recommends a permit application submittal meeting whereby facility personnel and their consultants can meet with Department staff. In such a meeting, an application component review can be conducted and any missing pieces of information can be identified. Such meetings should realize fairly substantial decreases in the time necessary to process the permit.

All requests should be made by contacting the Department at (602) 771-2338.

1.2 ADEQ TIMEFRAME FOR ADMINISTRATIVE COMPLETENESS REVIEW

ADEQ will determine if the permit application is administratively complete within 10 calendar days after a permit application is received.

1.3 ADEQ TIMEFRAME FOR PROCESSING CLASS II PERMITS

After receiving a complete application, ADEQ will strive to take final action on the application within:

Class II Permit:	120 calendar days
Significant Permit Revision:	100 calendar days
Minor Permit Revision:	15 calendar days

SECTION 2.0

IS A CLASS II PERMIT APPROPRIATE FOR YOUR SOURCE?

2.1 Does Your Source Require a Registration or a Permit?

- A. Listed below are four categories of sources that do not need a registration or a permit.
1. A stationary source that consists solely of a single *category exempt activity* plus any combination of *trivial activities*;
 2. Agricultural equipment used in normal farm operations;
 3. A source that is not subject to an NSPS or NESHAP and meets all of the criteria below:
 - a. *Maximum Capacity to Emit* of regulated air pollutants excluding *regulated minor NSR pollutants* is less than *significant* thresholds;
 - b. *Maximum Capacity to Emit* of HAPs is less than 10 tons per year for an individual HAP and 25 tons per year for all HAPs combined;
 - c. *Maximum Capacity to Emit* of *Minor NSR Pollutants* is less than *permitting exemption thresholds*.
 4. A source subject to any combination of NSPS and NESHAPs on the *Excluded NSPS/NESHAP List* and meets all of the criteria below:
 - a. *Maximum Capacity to Emit* of regulated air pollutants excluding *regulated minor NSR pollutants* is less than *significant* thresholds;
 - b. *Maximum Capacity to Emit* of HAPs is less than 10 tons per year for an individual HAP and 25 tons per year for all HAPs combined;
 - c. *Maximum Capacity to Emit* of *Minor NSR Pollutants* is less than *permitting exemption thresholds*.
- B. If your source falls into one of the four categories listed above in Section A, it does not need a registration or a permit. However, your source will need to comply with all applicable regulations to which it is subject.
- C. If your source does not fall into any of the four categories listed above in Section A, proceed to Section 2.2 to determine if your source could qualify for a registration.

2.2 Can Your Source Qualify for a Registration?

- A. Listed below are three categories of sources that require registration.
1. A source that is subject to any NSPS and/or NESHAP other than those included in the *Excluded NSPS/NESHAP list* and meets all of the criteria below:
 - a. *Maximum Capacity to Emit* of regulated air pollutants is less than *significant* levels;
 - b. *Maximum Capacity to Emit* of HAPs is less than 10 tons per year for an individual HAP and 25 tons per year for all HAPs combined.
 2. A source that does not employ *elective limits* and meets all of the criteria below:
 - a. *Maximum Capacity to Emit* of regulated air pollutants is less than *significant* levels;
 - b. *Maximum Capacity to Emit* of HAPs is less than 10 tons per year for an individual HAP and 25 tons per year for all HAPs combined;
 - c. *Maximum Capacity to Emit* of *Regulated Minor NSR Pollutants* is greater than or equal to the *permitting exemption thresholds*.
 3. A source that employs *elective limits* and meets all of the criteria below:
 - a. *Maximum Capacity to Emit* of regulated air pollutants is less than *significant* levels;
 - b. *Maximum Capacity to Emit* of HAPs is less than 10 tons per year for an individual HAP and 25 tons per year for all HAPs combined.
- B. If your source falls into one of the three categories listed above in Section A, it qualifies for a registration. Please complete the Registration Application Packet.
- C. If your source does not fall into any of the three categories listed above in Section A, proceed to Section 2.3 to determine if your source requires a Class II permit.

Note: Through the use of *elective limits or controls*, a new source or a previously permitted source can qualify for registration if the facility's *maximum capacity to emit with elective limits* is less than *significant*.

2.3 Does Your Source Require a Class II Permit?

- A. A source will require a Class II permit if any of the following criteria are met:
1. ***Potential to Emit*** of ***Regulated NSR Pollutants*** are less than 100 ton per year for attainment pollutants;
 2. ***Potential to Emit*** is less than the ***Article 4 Major Source Thresholds*** for nonattainment pollutants;
 3. ***Maximum capacity to emit*** HAPs is greater than 10 tons per year for an individual HAP and 25 tons per year for all HAPs combined and ***Potential to Emit*** of HAPs of is less than 10 tons per year for an individual HAP and 25 tons per year for all HAPs combined.
- B. If your source satisfies the criteria above in Section A, proceed to Section 3, Class II Permit Application Package.
- C. If your source does not qualify for a Class II permit, then it will require a Class I permit. You should complete the Class I Permit Application Packet.

SECTION 3.0

CLASS II PERMIT APPLICATION PACKAGE

SECTION 3.1
ARIZONA DEPARTMENT OF ENVIRONMENTAL QUALITY
Air Quality Division
1110 West Washington • Phoenix, AZ 85007 • Phone: (602) 771-2338

STANDARD CLASS II PERMIT APPLICATION FORM
(As required by A.R.S. § 49-426, and Chapter 2, Article 3, Arizona Administrative Code)

1. Permit to be issued to (Business license name of organization that is to receive permit):

2. Mailing Address: _____
City: _____ State: _____ ZIP: _____

3. Name (or names) of Responsible Official: _____
Phone: _____ Fax: _____ Email: _____

4. Facility Manager/Contact Person and Title: _____
Phone: _____ Fax: _____ Email: _____

5. Facility Name: _____
Facility Location/Address (Current/Proposed): _____
City: _____ County: _____ ZIP: _____
Indian Reservation (if applicable, which one): _____
Latitude/Longitude, Elevation: _____

6. General Nature of Business: _____

7. Type of Organization:
 Corporation Individual Owner Partnership Government Entity LLC
 Other _____

8. Permit Application Basis: New Source Revision Renewal of Existing Permit
For renewal or modification, include existing permit number (and exp. date): _____
Date of Commencement of Construction or Modification: _____
Primary Standard Industrial Classification Code: _____

9. I certify that I have knowledge of the facts herein set forth, that the same are true, accurate and complete to the best of my knowledge and belief, and that all information not identified by me as confidential in nature shall be treated by ADEQ as public record. I also attest that I am in compliance with the applicable requirements of the Permit and will continue to comply with such requirements and any future requirements that become effective during the life of the Permit. I will present a certification of compliance to ADEQ no less than annually and more frequently if specified by ADEQ. I further state that I will assume responsibility for the construction, modification, or operation of the source in accordance with Arizona Administrative Code, Title 18, Chapter 2 and any permit issued thereof.

Signature of Responsible Official: _____
Printed Name of Signer/Official Title: _____
Date: _____ Telephone Number: _____

Instructions for Standard Class II Permit Application Form

ADEQ requires all applicants to submit a completed Standard Permit Application Form.

- Item #1:** Business license name that is to receive the permit. This business name must be registered with the Arizona Corporation Commission.
- Item #2:** Mailing address. This is the address where the permit will be mailed.
- Item #3:** Name(s) of Responsible Official
- Item #4:** Facility Manager/Contact Person - This should be the person who is responsible for implementing the permit at the facility and the person ADEQ may contact for additional information
- Item #5:** Facility Name and Address: This is the address of the current or proposed location of the facility.
- Item #6:** General Nature of Business - This should be in terms of what is produced at the facility.
- Item #7:** Type of Organization. If the "other" box is checked, specify what the organization is.
- Item #8:** Permit Application Basis. Indicate what type of permit is being applied for. If the facility is already permitted and is applying for a revision or renewal, then the current permit number must be included. The Date of Commencement of Construction/ Modification is the expected date that construction or modification will begin. This date need not be definite.
- Item #9:** Signature and Printed Name of ***Responsible Official***. If unsure who the responsible official is for your company, refer to the definition in Section 4, Definitions.

3.2 Standard Class II Permit Application Components

No application shall be considered properly filed until the Director has determined that all information required by this application form and the applicable statutes and regulations have been submitted. For permit revisions, the applicant need only supply information which directly pertains to the revision.

In addition to the information required on the standard application form, the applicant shall supply the following:

- A. A detailed description of each process at the facility;
- B. A flow diagram for all processes;
- C. A description of alternate operating scenarios, if applicable;
- D. Emissions Calculations
 - 1. New Sources
 - Emission calculations for new sources shall include:
 - a. The facility-wide ***Potential to Emit*** for ***criteria pollutants*** and hazardous air pollutants; and
 - b. A detailed breakdown of emissions from each process.
 - 2. Modifications
 - Emission calculations for modifications shall include:
 - a. The increase in ***Potential to Emit*** for the modified source;
 - b. A detailed breakdown of emissions from each process;
 - c. If new emission source(s) are being added, the ***Potential to Emit*** for each new source; and
 - d. The facility-wide ***Potential to Emit*** before the modification and the facility-wide ***Potential to Emit*** after the modification.
 - 3. Emissions shall be expressed in pounds per hour and tons per year.
 - 4. Emission factors must be clearly documented. If manufacturer specifications or site-specific testing is being utilized to develop the emission factors, appropriate documentation should be provided. The Department may impose permit limits based on such emission factors with associated testing and monitoring provisions.
 - 5. An electronic copy of the emission calculations should be included in the application.
- E. Minor NSR Applicability Determination

If a new stationary source has the ***Potential to Emit*** of a ***regulated minor NSR pollutant***, or a modified source has an increase in the ***Potential to Emit*** of a ***regulated minor NSR pollutant***, greater than or equal to the ***permitting exemption threshold***, then that ***regulated minor NSR pollutant*** is subject to minor NSR requirements. In that event, the applicant

must either:

- a. Elect to have the Director perform a screening model of its emissions; or
- b. Implement ***Reasonably Available Control Technology (RACT)***.

A detailed explanation on how to select ***RACT*** can be found in the Department's Minor NSR Guidance document available online at:

<http://www.azdeq.gov/environ/air/permits/permitapplications.html>

- F. An explanation of any proposed exemptions from otherwise applicable requirements.
- G. Facilities that wish to accept voluntary limitations in order to avoid classification as a major source or a major modification, shall propose such limitations. If such limitations are acceptable to the Department, they will be incorporated into the permit and made enforceable by means of monitoring, recordkeeping, and/or performance testing.
- H. A comprehensive equipment list which includes the make, model, serial number, equipment identification (ID) number, and date of manufacture of all process and control equipment (equipment other than those identified as insignificant activities). The date of manufacture must be included in order to determine applicability of regulations.
- I. A listing of all insignificant activities.
- J. Any application component that is identified as confidential shall follow the notice obligations in A.R.S. 49-432 and A.A.C. R18-2-305.
- K. For existing sources that are not currently in compliance with an applicable requirement, a compliance schedule should be attached which documents how the facility will achieve compliance with such requirement(s). The compliance schedule should include a time line of remedial measures, including an enforceable sequence of actions with milestones leading to compliance with the applicable requirement(s).
- L. Suggested draft permit language must be included in minor permit revision applications.

3.3 Minor New Source Review Applicability (Emission Calculations)

A. Emission Calculations for determining Minor NSR Applicability

1. New Sources

- a. For each emission unit, determine the *potential to emit (PTE)* for each *regulated minor NSR pollutant*.
- b. Determine facility-wide *PTE* for each *regulated minor NSR pollutant*.
- c. Minor NSR requirements apply to each *regulated minor NSR pollutant* for which the facility-wide *PTE* emissions are greater than or equal to the *permitting exemption threshold*.

2. Modifications

- a. Follow the steps below to determine if Minor NSR requirements apply to the modification:
 - (1) For each *regulated minor NSR pollutant* previously emitted, determine the emission increase for each emission unit that is modified.
 - (2) For each *regulated minor NSR pollutant* not previously emitted, determine the *PTE* for each emission unit that is modified.
 - (3) For each new emissions unit that is added, determine the *PTE* for each *regulated minor NSR pollutant*.
 - (4) Determine the facility-wide emission increase for each *regulated minor NSR pollutant*.
 - (5) Minor NSR requirements apply to each *regulated minor NSR pollutant* for which the facility-wide *PTE* increase is greater than or equal to the corresponding *permitting exemption threshold*.

Note: A change constitutes a *minor NSR modification* regardless of whether there will be a net decrease in total source emissions or a net increase in total source emissions that is less than the *permitting exemption thresholds* as a result of decreases in the PTE of other emission units at the same stationary source.

3. A modeling analysis or a *Reasonably Available Control Technology (RACT)* determination is required only if a pollutant triggers Minor NSR requirements.

3.4 Modeling or RACT Determination (If subject to Minor New Source Review Requirements)

A. For each *regulated minor NSR pollutant* that is subject to Minor NSR requirements, there are two options from which an applicant has to choose: Modeling or *Reasonably Available Control Technology (RACT)*. Details for each option are listed below:

1. Modeling

a. If the applicant requests that ADEQ perform screen modeling, the applicant must provide the following:

(1) Facility Information

- (a) Detailed facility layout;
- (b) Location of the facility's fence line;
- (c) Locations of emission points;
- (d) Location of process equipment (i.e. storage tanks, silos, conveyors, etc.), lay down areas, parking lots, haul roads, maintenance roads, storage piles, etc.; and
- (e) Location and dimensions of all buildings at the facility.
- (f) If a site plan becomes too crowded, a table listing all the above information can be provided instead, with the ID traceable on the plot.

(2) Emission Profiles

- (a) Maximum hourly emission rates (lb/hr); and
- (b) Maximum annual emission rate (tons/year)

(3) Stack Parameters

- (a) UTM coordinates;
- (b) Stack inside diameter;
- (c) Stack height above ground;
- (d) Stack gas exit velocity;
- (e) Stack gas exit temperature;
- (f) Indicate if the stack is non-vertical or vertical with obstructed emissions (such as a raincap); and
- (g) If the stack is a non-round stack, provide length and width for a rectangular stack.

ADEQ will perform screen modeling for each pollutant subject to Minor NSR requirements. If screen modeling indicates possible interference with the NAAQS or maintenance of the NAAQS, ADEQ will inform the applicant that refined modeling is necessary to be conducted by the applicant. Refined modeling should be performed in accordance with

ADEQ's modeling guidelines that are available online at:

<http://www.azdeq.gov/enviro/air/permits/airdispersionmodeling.html>

ADEQ strongly recommends that the applicant submit a modeling protocol for ADEQ's review and approval. A detailed modeling report, including all modeling files and associated information, must be included in the application.

For expedited permit processing, instead of requesting ADEQ to perform screen modeling, the Permittee may choose to perform screen modeling or refined modeling to demonstrate that the new source or modification will not interfere with the NAAQS.

2. RACT

a. If the applicant chooses to implement RACT, the following steps should be followed:

- (1) For each ***regulated minor NSR pollutant*** subject to minor NSR, evaluate each emission unit for RACT applicability.
- (2) If for any emission unit, the emissions or increase in emissions of a pollutant subject to Minor NSR requirements is greater than 20% of the ***permitting exemption threshold*** for that pollutant, ***RACT*** will be required for that pollutant and emission unit.
- (3) The application should contain the RACT determinations for all pollutants subject to minor NSR program. The application should contain the RACT determinations for all pollutants subject to minor NSR program based on the case by case analysis performed by the applicant. The applicant may use one of the following to determine RACT for the affected emission units:
 - (a) EPA RACT/BACT/LAER clearinghouse
<http://cfpub.epa.gov/RBLC/>
 - (b) An emissions standard established or revised by the Administrator for the same type of source under section 111 or 112 of the Act after November 15, 1990. (NSPS/NESHAP)

Link for NSPS (40 CFR 60.1-60.5499)/NESHAP (40 CFR 63.1 to 63.12099)

http://www.ecfr.gov/cgi-bin/text-idx?SID=7716bad8c76b30368044a215ff74fdbe&mc=true&tpl=/ecfrbrowse/Title40/40tab_02.tpl
 - (c) An applicable requirement of A.A.C. R18-2 or of air quality control regulations adopted by a County under A.R.S. § 49-479 that has been specifically identified as constituting RACT. As per the following guidance

document, the 300 series Maricopa County Rules under Regulation III are considered to be *RACT* requirements.

http://maricopa.gov/aq/divisions/permit_engineering/docs/pdf/BACT%20Guidance.pdf

These rules (Rule 300 through Rule 372) are available at:

http://www.maricopa.gov/aq/divisions/planning_analysis/AdoptedRules.aspx

- (d) A RACT standard imposed on the same type of source by a general permit.
 - (e) A *RACT* standard imposed on the same type of source no more than 10 years before the date of application submittal. (ADEQ will develop database).
- (4) Notwithstanding a Permittee's election to conduct a RACT evaluation for a *regulated minor NSR Pollutant*, ADEQ may choose to use its discretion to request dispersion modeling, on case by case basis, to ensure that the NAAQS are not violated.
- (5) An application for a permit revision subject to minor NSR shall be processed as a significant permit revision, except that the application may be processed as a minor permit revision if one of the following conditions is satisfied for each pollutant subject to minor NSR requirements:
- (a) A RACT standard under (3)(a) through (e) above is imposed on each emissions unit that requires such a standard; or
 - (b) The results of the SCREEN model for a *regulated minor NSR pollutant* show that expected concentrations, including background concentrations, are less than 75% of the applicable standard imposed in Article 2 of A.A.C.

Section 3.5 - Equipment List

Type of Equipment	Maximum Rated Capacity	Make	Model	Serial Number	Date of Manufacture	Equipment ID Number

All relevant equipment utilized at the facility should be included in the equipment list. Please complete all fields.
The date of manufacture must be included in order to determine applicability of regulations.
 Indicate the units (tons/hour, horsepower, etc.) when recording the maximum rated capacity.
 Make additional copies of this form if necessary.

SECTION 3.6 - EMISSION SOURCE FORM

					USE THIS SECTION FOR MODIFICATIONS ONLY		
Emission Point		Regulated Air Pollutant Name	PTE		PTE AFTER MODIFICATION		CHANGE IN PTE
Number	Name		lbs/hr	tons/yr	lbs/hr	tons/yr	tons/yr

SECTION 4.0 - DEFINITIONS

Attainment area means any area in the state that has been identified in regulations promulgated by the Administrator as being in compliance with national ambient air quality standards.

Categorical Sources mean the following classes of sources:

1. Coal cleaning plants with thermal dryers;
2. Kraft pulp mills;
3. Portland cement plants;
4. Primary zinc smelters;
5. Iron and steel mills;
6. Primary aluminum ore reduction plants;
7. Primary copper smelters;
8. Municipal incinerators capable of charging more than 250 tons of refuse per day;
9. Hydrofluoric, sulfuric, or nitric acid plants;
10. Petroleum refineries;
11. Lime plants;
12. Phosphate rock processing plants;
13. Coke oven batteries;
14. Sulfur recovery plants;
15. Carbon black plants using the furnace process;
16. Primary lead smelters;
17. Fuel conversion plants;
18. Sintering plants;
19. Secondary metal production plants;
20. Chemical process plants, which shall not include ethanol production facilities that produce ethanol by natural fermentation included in North American Industry Classification System codes 325193 or 312140;
21. Fossil-fuel boilers, combinations thereof, totaling more than 250 million Btus per hour heat input;
22. Petroleum storage and transfer units with a total storage capacity more than 300,000 barrels;
23. Taconite preprocessing plants;
24. Glass fiber processing plants;
25. Charcoal production plants;
26. Fossil-fuel-fired steam electric plants and combined cycle gas turbines of more than 250 million Btus per hour heat input

Categorical Exempt Activities mean:

1. Any combination of diesel-, natural gas- or gasoline fired engines with cumulative power equal to or less than 145 horsepower
2. Natural gas-fired engines with cumulative power equal to or less than 155 horsepower

3. Gasoline-fired engines with cumulative power equal to or less than 200 horsepower
4. Any of the following emergency or stand-by engines used for less than 500 hours in each calendar year, provided the permittee keeps records documenting the hours of operation of the engines:
 - a. Any combination of diesel-, natural gas- or gasoline-fired emergency engines with cumulative power equal to or less than 2,500 horsepower.
 - b. Natural gas-fired emergency engines with cumulative power equal to or less than 2,700 horsepower.
 - c. Gasoline-fired emergency engines with cumulative power equal to or less than 3,700 horsepower.
 - d. Any combination of boilers with a cumulative maximum design heat input capacity of less than 10 million Btu/hr

Construction means any physical change or change in the method of operation, including fabrication, erection, installation, demolition, or modification of an emissions unit, which would result in a change in actual emissions.

Elective Limits or Controls means the owner/operator of a source that requires a registration may elect to include any of the following emission limitations in the registration, provided the registration also includes the operating, maintenance, monitoring, and recordkeeping requirements specified below for the limitation:

1. hours of operation for any process or combination of processes (requires owner/ operator to log hours operated daily)
2. production rate for any process or combination of processes (requires owner/ operator to log production rate daily)
3. fabric filter to control particulate matter emissions (requires owner/ operator to: operate and maintain the fabric filter in accordance with manufacturer's recommendations; operate the fabric filter at all times the emission unit is operated; inspect fabric filter once per month for tears or leaks and promptly repair any tears and leaks identified; and record all inspections and any maintenance activities required as a result of the inspection)
4. VOC or HAP limit on process materials (requires owner/ operator to maintain a log of the VOC or HAP concentrations in each material used during the current calendar year)

Excluded NSPS/NESHAPS List includes:

1. 40 CFR 60, Subpart AAA (Residential Wood Heaters)
2. 40 CFR 60, Subpart IIII (Stationary Compression Ignition Internal Combustion Engines)
3. 40 CFR 60, Subpart JJJJ (Stationary Spark Ignition Internal Combustion Engines)
4. 40 CFR 61.145 (Asbestos - Standard for Demolition and Renovation)
5. 40 CFR 63, Subpart ZZZZ (Reciprocating Internal Combustion Engines)
6. 40 CFR 63, Subpart WWWW (Ethylene Oxide Sterilizers)
7. 40 CFR 63, Subpart CCCCCC (Gasoline Distribution)

8. 40 CFR 63, Subpart HHHHHH (Paint Stripping and Miscellaneous Surface Coating Operations)
9. 40 CFR 63, Subpart JJJJJJ (Industrial, Commercial, and Institutional Boilers Area Sources)
10. 112(r) (Guide to the Accidental Release Prevention Requirements)

Insignificant Activities mean:

1. Liquid Storage and Piping Liquid Storage and Piping
 - a. Petroleum product storage tanks containing the following substances, provided the applicant lists and identifies the contents of each tank with a volume of 350 gallons or more and provides threshold values for throughput or capacity or both for each such tank: diesel fuels and fuel oil in storage tanks with capacity of 40,000 gallons or less, lubricating oil, transformer oil, and used oil.
 - b. Gasoline storage tanks with capacity of 10,000 gallons or less.
 - c. Storage and piping of natural gas, butane, propane, or liquefied petroleum gas, provided the applicant lists and identifies the contents of each stationary storage vessel with a volume of 350 gallons or more and provides threshold values for throughput or capacity or both for each such vessel.
 - d. Piping of fuel oils, used oil and transformer oil, provided the applicant includes a system description.
 - e. Storage and handling of drums or other transportable containers where the containers are sealed during storage, and covered during loading and unloading, including containers of waste and used oil regulated under the federal Resource Conservation and Recovery Act, 42 U.S.C. 6901-6992k. Permit applicants must provide a description of material in the containers and the approximate amount stored.
 - f. Storage tanks of any size containing exclusively soaps, detergents, waxes, greases, aqueous salt solutions, aqueous solutions of acids that are not regulated air pollutants, or aqueous caustic solutions, provided the permit applicant specifies the contents of each storage tank with a volume of 350 gallons or more.
 - g. Electrical transformer oil pumping, cleaning, filtering, drying and the re-installation of oil back into transformers.
2. Internal combustion engine-driven electrical generator sets, and internal combustion engine-driven water pumps used for less than 500 hours per calendar year for emergency replacement or standby service, provided the permittee keeps records documenting the hours of operation of this equipment.
3. Low Emitting Processes
 - a. Batch mixers with rated capacity of 5 cubic feet or less.
 - b. Wet sand and gravel production facilities that obtain material from subterranean and subaqueous beds, whose production rate is 200 tons/hour or less, and whose permanent in-plant roads are paved and cleaned to control dust. This does not include activities in emissions units which are used to crush or grind any nonmetallic minerals.
 - c. Powder coating operations.

- d. Equipment using water, water and soap or detergent, or a suspension of abrasives in water for purposes of cleaning or finishing.
 - e. Blast-cleaning equipment using a suspension of abrasive in water and any exhaust system or collector serving them exclusively.
 - f. Plastic pipe welding.
4. Site Maintenance
- a. Housekeeping activities and associated products used for cleaning purposes, including collecting spilled and accumulated materials at the source, including operation of fixed vacuum cleaning systems specifically for such purposes.
 - b. Sanding of streets and roads to abate traffic hazards caused by ice and snow.
 - c. Street and parking lot striping.
 - d. Architectural painting and associated surface preparation for maintenance purposes at industrial or commercial facilities.
5. Sampling and Testing
- a. Noncommercial (in-house) experimental, analytical laboratory equipment which is bench scale in nature, including quality control/quality assurance laboratories supporting a stationary source and research and development laboratories.
 - b. Individual sampling points, analyzers, and process instrumentation, whose operation may result in emissions but that are not regulated as emission units.
6. Ancillary Non-Industrial Activities
- a. General office activities, such as paper shredding, copying, photographic activities, and blueprinting, but not to include incineration.
 - b. Use of consumer products, including hazardous substances as that term is defined in the Federal Hazardous Substances Act (15 U.S.C. 1261 et seq.) where the product is used at a source in the same manner as normal consumer use.
 - c. Activities directly used in the diagnosis and treatment of disease, injury or other medical condition.
7. Miscellaneous Activities
- a. Installation and operation of potable, process and waste water observation wells, including drilling, pumping, filtering apparatus.
 - b. Transformer vents.

Maintenance Area means any geographic region of the United States that the EPA previously designated as a nonattainment area for one or more pollutants pursuant to the Clean Air Act Amendments of 1990, and subsequently

redesignated as an attainment area subject to the requirement to develop a maintenance plan under section 175A of the Clean Air Act, as amended.

Major Modification is defined as follows:

1. A major modification is any physical change in or change in the method of operation of a major source that would result in both a significant emissions increase of any regulated NSR pollutant and a significant net emissions increase of that pollutant from the stationary source.
2. Any emissions increase or net emissions increase that is significant for nitrogen oxides or volatile organic compounds is significant for ozone.

Major Source means:

1. A major source as defined in A.A.C R18-2-401.
 - a. For purposes of determining the applicability of A.A.C. R18-2-403 through A.A.C. R18-2-405 or A.A.C. R18-2-411, major source means any stationary source that emits, or has the potential to emit, 100 tons per year or more of any regulated NSR pollutant, except that the following thresholds shall apply in areas subject to subpart 2, subpart 3 or subpart 4 of part D, Title I of the Act:

Pollutant Emitted	Nonattainment Pollutant and Classification	Quantity Threshold (tons/year or more)
Carbon Monoxide (CO)	CO, Serious, if stationary sources contribute significantly to CO levels in the area as determined under rules issued by the Administrator	50
VOC	Ozone, Serious	50
VOC	Ozone, Severe	25
PM ₁₀	PM ₁₀ , Serious	70
PM _{2.5}	PM _{2.5} Serious	70
PM _{2.5} precursors identified in A.A.C. R18-2-101(124)(a)	PM _{2.5} Serious	70
NO _x	Ozone, Serious	50
NO _x	Ozone, Severe	25

- b. For purposes of determining the applicability of A.A.C. R18-2-406 through A.A.C. R18-2-408 or A.A.C. R18-2-410, major source means any stationary source that emits, or has the potential to emit, 100 tons per year or more of any regulated NSR pollutant if the source is classified as a categorical source, or 250 tons per year or more of any regulated NSR pollutant if the source is not classified as a categorical source;

- c. Any stationary source that emits, or has the potential to emit, five or more tons of lead per year;
 - d. A major source that is major for VOC or nitrogen oxides shall be considered major for ozone;
 - e. The fugitive emissions of a stationary source shall not be included in determining whether it is a major source, unless the source belongs to a section 302(j) category.
2. A major source under section 112 of the Act:
- a. For pollutants other than radionuclides, any stationary source that emits or has the potential to emit, in the aggregate, including fugitive emission 10 tons per year or more of any hazardous air pollutant which has been listed pursuant to section 112(b) of the Act, 25 tons per year or more of any combination of such hazardous air pollutants, or such lesser quantity as described in Article 11 of this Chapter. Notwithstanding the preceding sentence, emissions from any oil or gas exploration or production well (with its associated equipment) and emissions from any pipeline compressor or pump station shall not be aggregated with emissions from other similar units, whether or not such units are in a contiguous area or under common control, to determine whether such units or stations are major sources; or
 - b. For radionuclides, “major source” shall have the meaning specified by the Administrator by rule.
3. A major stationary source, as defined in section 302 of the Act, that directly emits or has the potential to emit, 100 tons per year or more of any air pollutant including any major source of fugitive emissions of any such pollutant. The fugitive emissions of a stationary source shall not be considered in determining whether it is a major stationary source for the purposes of section 302(j) of the Act, unless the source belongs to a section 302(j) category.

Maximum Capacity to Emit means the maximum capacity of a stationary source to emit a pollutant excluding secondary emissions, under its physical and operational design

Maximum Capacity to Emit with Elective Controls means the maximum capacity of a stationary source to emit a pollutant, excluding secondary emissions, under its physical and operational design. Any physical or operational limitation on the capacity of the source to emit a pollutant, including air pollution control equipment and restrictions on hours of operation or on the type or amount of material combusted, stored, or processed, shall be treated as part of its design only if the limitation or the effect it would have on emissions is subject to an elective limit under R18-2-302.01.F. Maximum capacity to emit with elective limits is currently referred to as uncontrolled potential to emit.

Minor NSR Modification means any of the following changes that do not qualify as a major source or major modification:

- 4. Any physical change in or change in the method of operation of an emission unit or a stationary source that either:
 - a. Increases the potential to emit of a regulated minor NSR pollutant by an amount greater than the permitting exemption thresholds, or
 - b. Results in emissions of a regulated minor NSR pollutant not previously emitted by such emission unit or stationary source in an amount greater than the permitting exemption thresholds.
- 5. The following do not constitute a physical change or change in the method of operation:
 - a. A change consisting solely of the construction of, or changes to, a combination of emissions units qualifying as a categorically exempt activity.

- b. For a stationary source that is required to obtain a Class II permit under R18-2-302 and that is subject to source-wide emissions caps under R18-2-306.01 or R18-2-306.02, a change that will not result in the violation of the existing emissions cap for that regulated minor NSR pollutant.
 - c. Replacement of an emission unit by a unit with a potential to emit regulated minor NSR pollutants that is less than or equal to the potential to emit of the existing unit, provided the replacement does not cause an increase in emissions at other emission units at the stationary source. A unit installed under this provision is subject to any limits applicable to the unit it replaced.
 - d. Routine maintenance, repair, and replacement.
 - e. Use of an alternative fuel or raw material by reason of an order under Sections 2(a) and (b) of the Energy Supply and Environmental Coordination Act of 1974, 15 U.S.C. 792, or by reason of a natural gas curtailment plan under the Federal Power Act, 16 U.S.C. 792 to 825r.
 - f. Use of an alternative fuel by reason of an order or rule under Section 125 of the Act.
 - g. Use of an alternative fuel at a steam generating unit to the extent that the fuel is generated from municipal solid waste.
 - h. Use of an alternative fuel or raw material by a stationary source that either:
 - (1) The source was capable of accommodating before December 12, 1976, unless the change would be prohibited under any federally enforceable permit condition established after December 12, 1976, under 40 CFR 52.21, or under Articles 3 or 4 of A.A.C R18-2; or
 - (2) The source is approved to use under any permit issued under 40 CFR 52.21, or under Articles 3 or 4 of A.A.C R18-2.
 - i. An increase in the hours of operation or in the production rate, unless the change would be prohibited under any federally enforceable permit condition established after December 12, 1976, under 40 CFR 52.21, or under Articles 3 or 4 of this Chapter.
 - j. Any change in ownership at a stationary source
 - k. The installation, operation, cessation, or removal of a temporary clean coal technology demonstration project, if the project complies with:
 - (1) The SIP, and
 - (2) Other requirements necessary to attain and maintain the national ambient air quality standards during the project and after it is terminated.
 - l. For electric utility steam generating units located in attainment and unclassifiable areas only, the installation or operation of a permanent clean coal technology demonstration project that constitutes repowering, if the project does not result in an increase in the potential to emit any regulated pollutant emitted by the unit. This exemption applies on a pollutant-by-pollutant basis.
 - m. For electric utility steam generating units located in attainment and unclassifiable areas only, the reactivation of a very clean coal-fired electric utility steam generating unit.
6. Construction of one or more new emissions units that have the potential to emit regulated minor NSR pollutants at an amount greater than the permitting exemption threshold.

7. A change constitutes a minor NSR modification regardless of whether there will be a net decrease in total source emissions or a net increase in total source emissions that is less than the permitting exemption threshold as a result of decreases in the potential to emit of other emission units at the same stationary source.
8. For purposes of this subsection:
 - a. “Potential to emit” means the lower of a source’s or emission unit’s potential to emit or its allowable emissions.
 - b. In determining potential to emit, the fugitive emissions of a stationary source shall not be considered unless the source belongs to a section 302(j) category.
 - c. All of the roadways located at a stationary source constitute a single emissions unit

Minor Source means a source of air pollution which is not a major source for the purposes of Article 4 and over which the Director, acting pursuant to A.R.S. § 49-402(B), has asserted jurisdiction.

Modification or Modify means a physical change in or change in the method of operation of a source that increases the emissions of any regulated air pollutant emitted by such source by more than any relevant de minimis amount or which results in the emission of any regulated air pollutant not previously emitted by more than such de minimis amount. An increase in emissions at a minor source shall be determined by comparing the source’s potential to emit before and after the modification⁶. The following exemptions apply:

1. A physical or operational change does not include routine maintenance, repair or replacement.
2. An increase in the hours of operation or if the production rate is not considered an operational change unless such increase is prohibited under any permit condition that is legally and practically enforceable by the department.
3. A change in ownership at a source is not considered a modification.

National Ambient Air Quality Standards (NAAQS) means the ambient air pollutant concentration limits established by the Administrator pursuant to section 109 of the Act.

Permitting Exemption Thresholds means the following:

Pollutant	Emissions Rate
PM _{2.5} (primary emissions only)	5 tons per year
PM ₁₀	7.5 tons per year
SO ₂	20 tons per year
NO _x	20 tons per year
VOCs	20 tons per year
CO	50 tons per year

Pollutant	Emissions Rate
Lead	0.3 tons per year

Potential to Emit or Potential Emission Rate means the maximum capacity of a stationary source to emit a pollutant, excluding secondary emissions, under its physical and operational design. Any physical or operational limitation on the capacity of the source to emit a pollutant, including air pollution control equipment and restrictions on hours of operation or on the type or amount of material combusted, stored, or processed, shall be treated as part of its design if the limitation or the effect it would have on emissions is legally and practically enforceable by the Department.

Regulated Air Pollutant means any of the following:

1. Any conventional air pollutant.
2. Nitrogen oxides and volatile organic compounds.
3. Any air contaminant that is subject to a standard contained in Article 9 of A.A.C. R18-2.
4. Any hazardous air pollutant as defined in Article 17 of A.A.C. R18-2.
5. Any Class I or II substance listed in section 602 of the Clean Air Act.

Regulated NSR Pollutant means any of the following:

1. Any pollutant for which a national ambient air quality standard has been promulgated and any pollutant identified under this subsection as a constituent or precursor to such pollutant. Precursors for purposes of NSR are the following:
 - a. Volatile organic compounds and nitrogen oxides are precursors to ozone in all areas.
 - b. Sulfur dioxide is a precursor to PM_{2.5} in all areas.
 - c. Nitrogen oxides are precursors to PM_{2.5} in all areas.
2. Any pollutant that is subject to any standard promulgated under Article 9 of this A.A.C R18-2.
3. Any Class I or II substance subject to a standard promulgated under or established by Title VI of the Act as of July 1, 2011.
4. Notwithstanding the above three, the term regulated NSR pollutant shall not include any or all hazardous air pollutants listed under A.A.C. R18-2-1101, unless the listed hazardous air pollutant is also regulated as a constituent or precursor of a general pollutant listed under section 108 of the Act as of July 1, 2010.
5. Particulate matter emissions, PM_{2.5} emissions, and PM₁₀ emissions shall include gaseous emissions from a source or activity which condense to form particulate matter at ambient temperatures. On and after January 1, 2011, condensable particulate matter shall be accounted for in applicability determinations and in establishing emissions limitations for particulate matter, PM_{2.5} and PM₁₀ in permits issued under Article 4.

Regulated Minor NSR Pollutant means any pollutant for which a national ambient air quality standard has been promulgated and the following precursors for such pollutants:

1. VOC and nitrogen oxides as precursors to ozone
2. Nitrogen oxides and sulfur dioxide as precursors to PM_{2.5}

Reasonably Available Control Technology (RACT) means devices, systems, process modifications, work practices or other apparatus or techniques that are determined by the Director to be reasonably available taking into account:

1. The necessity of imposing the controls in order to attain and maintain a national ambient air quality standard;
2. The social, environmental, energy and economic impact of the controls;
3. Control technology in use by similar sources; and
4. The capital and operating costs and technical feasibility of the controls.

Responsible Official means one of the following:

1. For a corporation: a president, secretary, treasurer, or vice-president of the corporation in charge of a principal business function, or any other person who performs similar policy or decision-making functions for the corporation, or a duly authorized representative of such person if the representative is responsible for the overall operation of one or more manufacturing, production, or operating facilities applying for or subject to a permit and either:
 - a. The facilities employ more than 250 persons or have gross annual sales or expenditures exceeding \$25 million (in second quarter 1980 dollars); or
 - b. The delegation of authority to such representatives is approved in advance by the permitting authority;
2. For a partnership or sole proprietorship: a general partner or the proprietor, respectively;
3. For a municipality, state, federal, or other public agency: either a principal executive officer or ranking elected official. A principal executive officer of a federal agency includes the chief executive officer having responsibility for the overall operations of a principal geographic unit of the agency (e.g., a Regional Administrator of EPA).
4. For affected sources:
 - a. The designated representative in so far as actions, standards, requirements, or prohibitions under Title IV of the Act or the regulations promulgated thereunder are concerned; and
 - b. The designated representative for any other purposes under 40 CFR 70.

Significant means, in reference to a significant emissions increase, a net emissions increase or a stationary source's potential to emit or uncontrolled potential to emit a regulated NSR pollutant:

5. A rate of emissions of conventional pollutants that would equal or exceed any of the following:

Pollutant	Emissions Rate
Carbon monoxide	100 tons per year (tpy)
Nitrogen oxides	40 tpy
Sulfur dioxide	40 tpy

Pollutant	Emissions Rate
Particulate matter	25 tpy
PM ₁₀	15 tpy
PM _{2.5}	10 tpy of direct PM _{2.5} emissions; 40 tpy of sulfur dioxide emissions; 40 tpy of nitrogen oxide emissions.
VOCs	40 tpy
Lead	0.6 tpy
Fluorides	3 tpy
Sulfuric acid mist	7 tpy
Hydrogen sulfide (H ₂ S)	10 tpy
Total reduced sulfur (including H ₂ S)	10 tpy
Reduced sulfur compounds (including H ₂ S)	10 tpy
Municipal waste combustor organics (measured as total tetra-through octa-chlorinated dibenzo-p-dioxins and dibenzofurans)	3.5 x 10 ⁻⁶ tpy
Municipal waste combustor metals (measured as particulate matter)	15 tpy
Municipal waste combustor acid gases (measured as sulfur dioxide and hydrogen chloride)	40 tpy
Municipal solid waste landfill emissions (measured as nonmethane organic compounds)	50 tpy
Any regulated NSR pollutant not specifically listed in this above	Any emission rate

2. In ozone nonattainment areas classified as serious or severe, the emission rate for nitrogen oxides or VOC determined under A.A.C. R18-2-405.
3. In a carbon monoxide nonattainment area classified as serious, a rate of emissions that would equal or exceed 50 tons per year, if the Administrator has determined that stationary sources contribute significantly to carbon monoxide levels in that area.
4. Notwithstanding the emission rates listed in 1 and 2 above, for purposes of determining the applicability of A.A.C. R18-2-406, any emissions rate or any net emissions increase associated with a major source or

major modification, which would be constructed within 10 kilometers of a Class I area and have an impact on the ambient air quality of such area equal to or greater than 1 µg/m³ (24-hour average).

Stationary Source means any building, structure, facility or installation subject to regulation pursuant to A.R.S. § 49-426(A) which emits or may emit any air pollutant. “Building,” “structure,” “facility,” or “installation” means all of the pollutant-emitting activities which belong to the same industrial grouping, are located on one or more contiguous or adjacent properties, and are under the control of the same person or persons under common control. Pollutant-emitting activities shall be considered as part of the same industrial grouping if they belong to the same “Major Group” as described in the “Standard Industrial Classification Manual, 1987.”

Trivial activities means activities and emissions units, such as the following, that may be omitted from a permit or registration application. Certain of the following listed activities include qualifying statements intended to exclude similar activities:

1. Low-Emitting Combustion
 - a. Combustion emissions from propulsion of mobile sources;
 - b. Emergency or backup electrical generators at residential locations;
 - c. Portable electrical generators that can be moved by hand from one location to another. “Moved by hand” means capable of being moved without the assistance of any motorized or non-motorized vehicle, conveyance, or device;
2. Low- Or Non-Emitting Industrial Activities
 - a. Blacksmith forges;
 - b. Hand-held or manually operated equipment used for buffing, polishing, carving, cutting, drilling, sawing, grinding, turning, routing or machining of ceramic art work, precision parts, leather, metals, plastics, fiberboard, masonry, carbon, glass, or wood;
 - c. Brazing, soldering, and welding equipment, and cutting torches related to manufacturing and construction activities that do not result in emission of HAP metals. Brazing, soldering, and welding equipment, and cutting torches related to manufacturing and construction activities that emit HAP metals are insignificant activities based on size or production level thresholds. Brazing, soldering, and welding equipment, and cutting torches directly related to plant maintenance and upkeep and repair or maintenance shop activities that emit HAP metals are treated as trivial and listed separately in this definition;
 - d. Drop hammers or hydraulic presses for forging or metalworking;
 - e. Air compressors and pneumatically operated equipment, including hand tools;
 - f. Batteries and battery charging stations, except at battery manufacturing plants;
 - g. Drop hammers or hydraulic presses for forging or metalworking;
 - h. Equipment used exclusively to slaughter animals, not including other equipment at slaughterhouses, such as rendering cookers, boilers, heating plants, incinerators, and electrical power generating equipment;
 - i. Hand-held applicator equipment for hot melt adhesives with no VOC in the adhesive formulation;
 - j. Equipment used for surface coating, painting, dipping, or spraying operations, except those that will emit VOC or HAP;
 - k. CO₂ lasers used only on metals and other materials that do not emit HAP in the process;
 - l. Electric or steam-heated drying ovens and autoclaves, but not the emissions from the articles or substances being processed in the ovens or autoclaves or the boilers delivering the steam;

- m. Salt baths using nonvolatile salts that do not result in emissions of any regulated air pollutants;
- n. Laser trimmers using dust collection to prevent fugitive emissions;
- o. Process water filtration systems and demineralizers;
- p. Demineralized water tanks and demineralizer vents;
- q. Oxygen scavenging or de-aeration of water;
- r. Ozone generators;
- s. Steam vents and safety relief valves;
- t. Steam leaks; and
- u. Steam cleaning operations and steam sterilizers;
- v. Use of vacuum trucks and high pressure washer/cleaning equipment within the stationary source boundaries for cleanup and insource transfer of liquids and slurried solids to waste water treatment units or conveyances;
- w. Equipment using water, water and soap or detergent, or a suspension of abrasives in water for purposes of cleaning or finishing.
- x. Electric motors.

3. Building and Site Maintenance Activities

- a. Plant and building maintenance and upkeep activities, including grounds-keeping, general repairs, cleaning, painting, welding, plumbing, re-tarring roofs, installing insulation, and paving parking lots, if these activities are not conducted as part of a manufacturing process, are not related to the source's primary business activity, and do not otherwise trigger a permit revision. Cleaning and painting activities qualify as trivial activities if they are not subject to VOC or hazardous air pollutant control requirements;
- b. Repair or maintenance shop activities not related to the source's primary business activity, not including emissions from surface coating, de-greasing, or solvent metal cleaning activities, and not otherwise triggering a permit revision;
- c. Janitorial services and consumer use of janitorial products;
- d. Landscaping activities;
- e. Routine calibration and maintenance of laboratory equipment or other analytical instruments;
- f. Sanding of streets and roads to abate traffic hazards caused by ice and snow;
- g. Street and parking lot striping;
- h. Caulking operations which are not part of a production process.

4. Incidental, Non-Industrial Activities

- a. Air-conditioning units used for human comfort that do not have applicable requirements under Title VI of the Act;
- b. Ventilating units used for human comfort that do not exhaust air pollutants into the ambient air from any manufacturing, industrial or commercial process;
- c. Tobacco smoking rooms and areas;
- d. Non-commercial food preparation;
- e. General office activities, such as paper shredding, copying, photographic activities, pencil

- sharpening and blueprinting, but not including incineration;
 - f. Laundry activities, except for dry-cleaning and steam boilers;
 - g. Bathroom and toilet vent emissions;
 - h. Fugitive emissions related to movement of passenger vehicles, if the emissions are not counted for applicability purposes under subsection (144)(c) of the definition of major source in this Section and any required fugitive dust control plan or its equivalent is submitted with the application;
 - i. Use of consumer products, including hazardous substances as that term is defined in the Federal Hazardous Substances Act (15 U.S.C. 1261 et seq.) where the product is used at a source in the same manner as normal consumer use;
 - j. Activities directly used in the diagnosis and treatment of disease, injury or other medical condition;
 - k. Circuit breakers;
 - l. Adhesive use which is not related to production.
5. Storage, Piping and Packaging
- a. Storage tanks, vessels, and containers holding or storing liquid substances that will not emit any VOC or HAP;
 - b. Storage tanks, reservoirs, and pumping and handling equipment of any size containing soaps, vegetable oil, grease, animal fat, and nonvolatile aqueous salt solutions, if appropriate lids and covers are used;
 - c. Chemical storage associated with water and wastewater treatment where the water is treated for consumption and/or use within the permitted facility;
 - d. Chemical storage associated with water and wastewater treatment where the water is treated for consumption and/or use within the permitted facility;
 - e. Storage cabinets for flammable products;
 - f. Natural gas pressure regulator vents, excluding venting at oil and gas production facilities;
 - g. Equipment used to mix and package soaps, vegetable oil, grease, animal fat, and nonvolatile aqueous salt solutions, if appropriate lids and covers are used;
 - h. Sampling and Testing
 - i. Vents from continuous emissions monitors and other analyzers;
 - j. Bench-scale laboratory equipment used for physical or chemical analysis, but not laboratory fume hoods or vents;
 - k. Equipment used for quality control, quality assurance, or inspection purposes, including sampling equipment used to withdraw materials for analysis;
 - l. Hydraulic and hydrostatic testing equipment;
 - m. Environmental chambers not using HAP gases;
 - n. Soil gas sampling;
 - o. Individual sampling points, analyzers, and process instrumentation, whose operation may result in emissions but that are not regulated as emission units;
6. Safety Activities
- a. Fire suppression systems;

- b. Emergency road flares;
- c. Miscellaneous Activities
- d. Shock chambers;
- e. Humidity chambers;
- f. Solar simulators;
- g. Cathodic protection systems;
- h. High voltage induced corona; and
- i. Filter.

SECTION 5.0 -APPLICATION ADMINISTRATIVE COMPLETENESS CHECKLIST

	REQUIREMENT	MEETS REQUIREMENTS			COMMENT
		YES	NO	N/A	
1	Has the standard application form been completed?				
2	Has the responsible official signed the standard application form?				
3	Has a process description been provided?				
4	Are the facility's emissions documented with all appropriate supporting information?				
5	Is the facility subject to Minor NSR requirements? If the answer is "YES", answer 6a, 6b and 6c as applicable. If the answer is "NO", skip to 7.				
6.a	If the facility chooses to implement RACT, is the RACT determination included for the affected pollutants for all affected emission units?				
6.b	If the facility chooses to demonstrate compliance with NAAQS by screen modeling, is the modeling analysis included?				
6.c	If refined modeling has been conducted, is a comprehensive modeling report along with all modeling files included?				
7	Does the application include an equipment list with the type, name, make, model, serial number, maximum rated capacity, and date of manufacture?				
8	Does the application include an identification and description of Pollution Controls? (if applicable)				
9	For any application component claimed as confidential, are the requirements of AR.S. 49-432 and A.A.C. R18-2-305 addressed?				
10	For any current non-compliance issue, is a compliance schedule attached?				
11	For minor permit revision that will make a modification upon submittal of application, has a suggested draft permit been attached?
