

# **ENGINEERING REVIEW**

# NOTICE OF INTENT TO DISCHARGE SEWAGE COLLECTION SYSTEM (4.01 GP)

#### **GENERAL INFORMATION**

#### **APPLICATION PROCESS**

- 1. Submit this Notice of Intent to Discharge (NOI) application and appropriate supplemental information and forms, which are identified in rule and/or in this form. Submit the application electronically to GWP ERU@azdeq.gov.
- 2. ADEQ recommends a pre-application meeting prior to submitting your application. You can request a pre-application meeting by emailing the Engineering Review Unit at <a href="https://gwp.eru@azdeq.gov">GWP\_ERU@azdeq.gov</a> prior to submitting the application. To facilitate scheduling the meeting in a timely manner, include "Pre-Application Meeting" in the subject line. Please bring all final application components to the meeting.
- 3. Ensure that email addresses are provided in the NOI application, as all permits are sent to applicants via email.
- 4. Review fees established by delegated counties or cities may differ. Applicable ADEQ review fees are listed on website: azdeq.gov/SepticSewerFees

#### Notes:

- a. The fee is based on Table 1 unit design flows and not the peak weather flows.
- b. Design flow for fee calculations are based on Table 1. The design flow calculation for fees must be based on the capacity that the sewage collection system is ultimately designed to carry upon full build out, including potential future up stream connections.
- c. Each realignment is a separate project and a separate NOI application and fee is required for each contiguous project.
- d. An applicant should receive approval from the Department prior to submitting an NOI for a courtesy review. The Department reserves the right to refuse a courtesy review request. The courtesy review fee is 1/3 of the applicable fee for the NOI application for the final project. In some cases, more than one courtesy review application may be required for a project. The balance (2/3) of the applicable fee will be due when submitting an NOI for the final project. Fees for the final NOI will be based on the components of that submittal and they may not reflect the fee charged in the courtesy review. An NOI application submitted 6 months or more after the Department issues comments on the courtesy review will have to pay 100% of the fee for the project.
- e. An applicant should receive approval from the Department prior to submitting an NOI for a priority review. The Department reserves the right to refuse a priority review request. The fee for a priority review is double the applicable and maximum fees.
- 5. Satisfy any deficiency requests arising from the Department's pre-construction review of the submitted information.
- 6. Receive a "Construction Authorization" from the Department authorizing construction of the sewage collection system. The construction of the project cannot begin until the Construction Authorization has been issued.
- 7. Construct the sewage collection system within two years from the date of the signed Construction Authorization.
- 8. Submit the <u>Request for Discharge Authorization</u> and required information to the Department to initiate the post-construction review and inspection. A new NOI and applicable fee shall be required if the Request for Discharge Authorization (RDA) is not received within 2 years from the date of the signed Construction Authorization.
- 9. Satisfy any deficiency request arising from the Department's post-construction review of the facility.
- 10. Receive a "Discharge Authorization" from the Department, which authorizes operation of the sewage collection system in accordance with the terms of the Type 4.01 General Aquifer Protection Permit and applicable requirements of statute and rule.

#### LICENSING TIME FRAMES

Licensing Time Frames (LTFs) are specified by the Arizona Department of Environmental Quality in AAC R18-1-525. The Following LTFs limit the number of business days ADEQ can review your project without a penalty:

License Type	Administrative Completeness Review	Substantive Review	Overall Time Frame		
300 Services or less	42	53*	95		
More than 300 Services	42	94*	136		

<sup>\*:</sup> Each request for an alternative design, installation, or operational feature under A.A.C. R18-9-A312(G) to a Type 4 General Permit adds eight business days to the substantive review time-frame.

### INSTRUCTIONS FOR THE COMPLETION OF THE NOTICE OF INTENT TO DISCHARGE

Please fill out and submit this NOI to obtain authorization to construct a sewage collection system under a Type 4.01 General Aquifer Protection Permit in accordance with A.A.C. R18-9-E301.

#### NAMING THE PROJECT (SECTION 1)

Indicate which review type ADEQ will use for this project.

Name the sewage collection system according to one of the following guidelines. If the project:

- 1. Serves a specific subdivision, assign the same name "XXX Subdivision;"
- 2. Serves a specific facility, use "XXX RV Park" or "...XXX Campground" or "....XXX Shopping Center;"
- 3. Does not directly service any source but will enable sewers to connect to a wastewater system, such as an infrastructure project, use, "XXX Street Sewer Line Extension" or "XXX Improvement District Extension."

#### **APPLICANT INFORMATION (SECTION 2)**

The Applicant is the person seeking the Construction Authorization and is the responsible party for the facility. The applicant is the person to whom the permit will be issued. In addition, the Applicant must:

- 1 Meet the definition of a "person" in accordance with R18-9-101(29) and A.R.S. 49-201 (26);
- 2 Be the owner and/or the operator of the facility or the property owner where the system is to be installed.
  - a. The facility owner is a person holding legal, equitable or possessory interest in the facility.
  - b. The facility operator is a person in control or having responsibility for the facility seeking the Construction Authorization.
- 3 Corporations, Limited Liability Companies and Partnerships must be registered with the Arizona Corporation Commission;
- 4 Sign the NOI (Section 6) certifying that the applicant agrees to comply with the requirements of the rule (A.A.C.) and the terms of the permit.

### **CONTACT PERSON/AGENT (SECTION 3)**

The Contact Person/Agent is the entity who acts on the behalf of the applicant to resolve permit related issues and receives correspondence during the application process. The Applicant is responsible to execute the necessary legal arrangements for the Contact Person/Agent to act on the Applicant's behalf.

# **EXISTING PERMITS (SECTION 4)**

Please include any of the following permits that may be required as part of this application:

- 1. Individual permits;
- 2. CMOM;
- 3. Any approvals for floodplain requirements from FEMA, ADWR, or the county (attach copies);
- 4. Any legal actions affecting the project including Notice of Violations and Consent Orders (attach copies).

# **CERTIFICATION STATEMENT (SECTION 5)**

The certification statement is to be completed by the applicant. The Contact Person/Agent is not to sign the certification statement unless other legal means are included in the application package.

### **SITE INFORMATION (SECTION 6)**

The site information shall be supplied as indicated in the application. If the proposed project is not within a city, please indicate the nearest city. The project location description shall provide enough information to reach the site given the instructions. You may reference a publication and page number that gives this description (such as Sewer Design Report Page 2 Section 1 Project Description).

# **DOWNSTREAM PERMIT INFORMATION (SECTION 7)**

The downstream permit information is required. The Department also requires that the receiving sewage collection system be at least authorized for construction prior to the proposed system being issued a Construction Authorization, so provide the ADEQ file number for the downstream system. The Department will not issue a Discharge Authorization until the downstream system has been issued a Discharge Authorization. In the case the downstream system was in existence prior to Jan 1, 2001, the application may need to submit a statement from the utility about the history, maintenance, and compliance status of the receiving system.

### Instructions For The Completion Of The Project Design Information Section

This part of the application is to provide the applicant and their engineer a quality check to ensure that the required data, design, and analysis is performed prior to submittal to ADEQ. The engineer or applicant should complete all relevant information and certification statement.

### **PROJECT DESIGN SUMMARY (SECTION 8)**

The applicant shall provide an overall design summary for this project.

# WASTEWATER TREATMENT PLANT INFORMATION (SECTION 9)

This section should include the information related to the WWTP that will serve this project. Please attach any relevant information associated with the WWTP (such as APP permit application status, construction schedules, etc) that may impact the approval of the proposed project.

#### **CAPACITY ASSURANCES (SECTION 10 - 11)**

Check the appropriate box relevant for the proposed project. The WWTP Capacity Assurance shall be included with the application package and shall include the commitment list issued from the WWTP.

# **SITE PLAN AND FEES (SECTION 12)**

Please indicate if the items are included in the application package.

# STANDARD DETAILS (SECTION 13)

Please indicate which standard details are used on the project. You may select more than one. If a project uses standard details and specifications other than those required in the Arizona Administrative Code (i.e. MAG or Pima County) the plans or the design report must contain a note that all the standard details and specifications have been reviewed and they meet minimum design requirements of the equivalent MAG or Pima County standard details and specifications.

#### **SYSTEM COMPONENT DETAILS (SECTION 14)**

Please select each of the components to be installed for the proposed project (Gravity Sewer Lines, Manholes, Force Main, Lift Stations, and/or Depressed Sewers). Complete the information requested for each component. Refer to the referenced rule(s) for the design and operational requirements. Supplying the requested information on this application does not alleviate the design engineer of including the information in the design report that is sealed by an Arizona-registered Professional Engineer.

#### GRAVITY SEWER LINES [R18-9-E301(D)(2)]

If the proposed project is incorporating gravity sewer lines, please check and supply the requested information. Submit a separate NOI for any force main and lift stations associated with the overall plan of sale or development.

#### MANHOLES [R18-9-E301(D)(3)]

If the project will include manholes, please check and supply the requested information.

#### FORCE MAINS [R18-9-E301(D)(4)]

If the proposed project is incorporating force mains, please check and supply the requested information. Submit a separate NOI for any gravity components associated with the overall plan of sale or development.

### LIFT STATIONS [R18-9-E301(D)(5)]

If the proposed project is incorporating lift stations, please check and supply the requested information

#### **DEPRESSED SEWERS [R18-9-E301(D)(6)]**

If the proposed project is incorporating depressed sewers, please check and supply the requested information.

# **CONSTRUCTION QUALITY DRAWINGS (SECTION 15)**

This section provides a brief check of what, at a minimum, shall be included in construction drawings submitted to ADEQ for review.

#### **SEWAGE COLLECTION SYSTEM DESIGN FLOWS (SECTION 16)**

This section is presented as a check item to ensure Table 1 Unit Design flows are used for the proposed project. The Table 1 design flow is used for the wastewater treatment plant capacity assurance form. The design flow incorporating the appropriate peaking factor as outlined in rule is the design flow to be used for the Sewage Collection System Capacity Assurance form and the design of the sewage collection system.

#### **OPERATION AND MAINTENANCE PLAN (SECTION 17)**

Please indicate the status of the O&M or approved CMOM plan for the proposed project.

#### **DESIGN DOCUMENTS (SECTION 18)**

This section provides a quality check to ensure that all design documents are signed and sealed by an Arizona Registered Professional Engineer as required in R18-9-E301(C)(7).

# **INSTRUCTIONS FOR THE COMPLETION OF THE ATTACHMENT 1**

Attachment one is a comprehensive checklist to assist the applicant and their design engineer to prepare components for submittal. The use of this attachment is not required but it is included for the benefit of the applicant in preparing the application package components for submittal to ADEQ.

15	Construction Quality Drawings (Check Boxes if Complete) [R18-9-E301 (C)(4)]
	A summary of materials table is included in the drawings.
	The plans and profiles for all sewer lines, manholes, force mains, depressed sewers, and lift stations with sufficient detail
	to allow Department verification of design and performance characteristics;
	Relevant cross sections showing construction details and elevations of key components of the sewage collection system to
	allow Department verification of design and performance characteristics, including the slope of each gravity sewer
	segment stated as a percentage;
	Drainage features and controls, and erosion protection as applicable, for the components of the project; and
	Horizontal and vertical location of utilities within the area affected by the sewer line construction.
16	Sewage Collection System Design Flows (Check Box if Complete) [R18-9-E301 (D)]
	☐ I have attached documentation of design flows for significant components of the sewage collection system and the basis
	for calculating the design flows.

# **ENGINEERING REVIEW**

# NOTICE OF INTENT TO DISCHARGE SEWAGE COLLECTION SYSTEM (4.01 GP)

ATTACHMENT 1: Plan submittal Checklist – This checklist is not required but it is provided to assist the applicant and their engineer in preparing required components for submittal for a sewage collection system (4.01 General Permit). Please be advised this attachment is intended as guidance and does not supersede the Arizona Revise Statutes or the Arizona Administrative Code.

Pro	ject Nam	ne:
Α.	Introdu	<u>action</u>
	Administration and administration administration and administration and administration administration and administration administration and administration administra	this document in conjunction with the minimum design standards and specifications set forth in Arizona strative Code (A.A.C.) R18-9 will minimize review time and elimination of requests for additional information for a y of projects. The use of this checklist is completely voluntary but will give guidance on self review of projects to be ded to ADEQ for engineering review for Sewage Collection System General Permit 4.01. This check list does not determine the requirements in A.A.C. R18-9.
В.	<b>Instruc</b>	<u>tions</u>
		submittal of the Notice of Intent, please review this checklist against the supporting documents for the project.
		ommon requests for additional information are shown in Red.
		uction Plans/Specifications
C.1	. <u>Genera</u>	<del>-</del>
	1.	The plans are readable, reproducible, 2'x3', and are folded.
	2.	One (1) copy of the plan (preferably folded with project name visible) and specifications is submitted.
	3.	All sheets are signed, sealed and dated (including expiration date) by an Arizona registered P.E.
	4.	None of the sheets are marked "Preliminary", "Not for Construction" or similar language.
	5.	Construction Plan Cover sheet (check all that apply):
		a. Contains owner/developer name and contact information.
		b. Contains engineer name and contact information.
		c. Contains a Site map with sufficient detail to give directions to reach the site from a major road o intersection.
		d. Contains a legend of all symbols used throughout the plans.
		e. Contains a list of all abbreviations used throughout the plans.
		f. Contains latitude and longitude coordinates.
		g. Contains a material quantity summary.
		h. Contains a sheet index.
	6.	All utilities (Water, Storm Water, Re-use Water, Electrical, Gas, etc) are shown with horizontal and vertical
		locations given.
	7.	Profiles showing elevations, pipe material, pipe diameter, slopes, and demonstration of all sewer crossings
	0	meeting minimum separation requirements.
	8.	FEMA Flood Map is provided (even if none of the project is within a flood zone).
		Water and sanitary sewer separation/protection notes included.
		Invert elevations of both water and sewer pipes are given at all water lines and sewer lines crossings.
C 2		Sewer line is placed 2 feet below the 100-year storm scour depth and constructed using D.I.P. (if applicable).
C.2		ard Plan Notes, Specifications, and Details
	l.	Standard details are either: M.A.G or Pima County
	2.	Standard details include at least:
		<ul> <li>a.  Trenching and bedding details for each pipe material and size.</li> <li>b.  Manhole detail for each size and type.</li> </ul>
		c. Detail for water tight lid, if needed.

REVISED AUGUST 2023 PAGE 1 OF 4

	d. 🗌	Thrust block standard	d details.			
	<ol><li>Standard no</li></ol>	tes that include:				
	a. 🗌	Uniform slope test th	at will be performed on 100% of th	ne sewer segment	s (see R18-9-E3	01(D)(2)(k)).
	b. 🔲	Mandrel test that will	be performed on 100% of the sew	er segments (see	R18-9-E301(D)	(2)(i)).
	c. 🗌	The low pressure air	test that will be performed for each	pipe material (se	ee R18-9-E301(I	O)(2)(j)):
		ASTM F1417-92	2 (1998)			
		☐ ASTM C924-02	(2002)			
		☐ ASTM C828-03	(2003)			
		☐ ASTM C1091-03	3a (2003)			
		☐ ASTM C969-02	(2002)			
		☐ ASTM D2321-0	0 (2000)			
	d. 🗌	The manhole integrit	y test that will be performed (see R	18-9-E301(D)(3)	)(e)).	
		Force main pressure s (see R18-9-E301(D)	test that will be performed includ $0(4)(f)$ .	ling duration, pr	essure, and acce	ptable pressure

	3. Alarm sy	ystem:				
		Audible and/or visible	e alarm.			
		Elevations of low and	d high levels of sewage are shown.			
		Pump Cycle Height (	The change in elevation between the	ne "pump on" and	d "pump off" sw	itches)

- Section 2.1 This section should include detailed description of the elements served by collection system must be specified, following Table 1 (R18-9-E301) and include table 2.1 Unit Design Flows for Proposed Project. Table 2.1 should include a summary of what flows were selected in the sizing of the system.
- Section 2.2 This section will summarize velocity min/max standards. Table 2.2 Performance Standards should be include the minimum and maximum slopes for each pipe size in order for meet the 2 fps and 10 fps min/max standards.
- Section 2.3 This section should include, when applicable, the scour depth analysis must be performed, with identification of the sewer line segments that must be placed below the scour depth. Table 2.3 Scour Analysis

### Chapter 3 - Basis of Design - Force Main and Lift Station

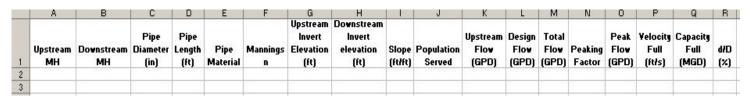

- Section 3.1 Description of the wet well corrosion protection method to achieve an operational life of at least 20 years.
- Section 3.2 Wet well sewage retention time calculations. When the retention time exceeds 30 minutes sewage must be aerated, chemicals are added to prevent or eliminate hydrogen sulfide formation, or adequate ventilation is provided.
- Section 3.3 Description of the wet well and force main odor control system. Where engineering justification is required, please include those calculations here.
- Section 3.4 Where a stand-by power generation is required (average flow of more than 10,000 GPD), details are
- Section 3.5 Calculations showing that the wet well volume meets the following criteria: wet well volume in gallons is 1/4 of the product of the minimum pump cycle time, in minutes, and the total pump capacity, in gallons per minute. Pump cycle time calculations are provided (data presented in appendix 2).
- Section 3.6 Engineering analysis of force mains for the proposed project (data in appendix 2).

### <u>Chapter 4 – Basis of Design – Water Distribution System</u>

Information as required for submittals for drinking water systems which should include fire flow analysis.

# Appendix 1 – Sewage Collection System Analysis

The appendix presents the hydraulic analysis of the system. An example of the format and information included in the appendix is given below.

# **Appendix 2 – Sewage Collection System Analysis**
