## **N. SUBPART BB – EQUIPMENT LEAKS**

---

### **N.1 Applicability**

The provisions of the Code of Federal Regulations (CFR), 40 CFR Part 264 Subpart BB, apply to owners and operators of facilities that treat, store, or dispose of hazardous wastes, and that operate equipment that contains or contacts hazardous wastes with organic concentrations of at least 10 percent by weight and that are managed in one of the following:

- A unit that is subject to the permitting requirements of 40 CFR Part 270
- A unit that is not exempt from permitting under the provisions of 40 CFR Part 262.17 and that is located at a hazardous waste management facility otherwise subject to the permitting requirements of 40 CFR Part 270
- A unit that is exempt from permitting under the provisions of 40 CFR 262.17 and is not a recycling unit under the provisions of 40 CFR Part 261.6

The proposed operations at CS Clean Solutions, Inc. (CS Clean) include treatment and storage of hazardous waste. However, there is no known organic content in the waste received and treated by the facility. Therefore, the facility is not subject to the requirements of Subpart BB. Waste profiles for the spent Cleansorb columns received by CS Clean are provided in **Section C**.
