

7/22/24 | Senator Mine Project Update

ADEQ and its contractors, Tetra Tech, Inc. and Environmental Response, Inc., are actively conducting remedial actions at Senator Mine. ADEQ obtained an emergency permit under Clean Water Act Section 404 (Nationwide Permit) from the U.S. Army Corps of Engineers for the remedial actions, which include a 42-inch pipe that will temporarily redirect the Hassayampa River and french drains that will redirect adit water seeps away from the tailings pile. These remedial actions aim to prevent failure of the tailings pile and help protect the Hassayampa River in the event of a future failure. ADEQ is evaluating long-term solutions for the tailings pile and discharging adit.
