

Clean Air, Safe Water
Healthy Land for Everyone

9/18/24 | Senator Mine Project Update

ADEQ, along with its contractors Tetra Tech, Inc. and Environmental Response, Inc., has completed site activities conducted under an emergency permit under Clean Water Act Section 404 (Nationwide Permit) from the U.S. Army Corps of Engineers. These completed activities include the installation of the French drains and a temporary 42-inch pipeline that is redirecting adit water seeps away from the tailings pile to protect the Hassayampa River. ADEQ will continue to monitor these features to ensure they continue to operate as designed. ADEQ and its contractors are now beginning to develop options for eventual remediation and clean-up of the site.
