These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

Note: For highly negatively-skewed data, confidence limits (e.g., Chen, Johnson, Lognormal, and Gamma) may not be reliable. Chen's and Johnson's methods provide adjustments for positvely skewed data sets.

Suggested UCL to Use

Data appear Normal, May want to try Normal Distribution

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

Note: For highly negatively-skewed data, confidence limits (e.g., Chen, Johnson, Lognormal, and Gamma) may not be reliable. Chen's and Johnson's methods provide adjustments for positvely skewed data sets.

SD	5.059	Std. Error of Mean	2.065
Coefficient of Variation	0.135	Skewness	-0.106
Mean of logged Data	3.618	SD of logged Data	0.136

Note: Sample size is small (e.g., <10), if data are collected using ISM approach
you may want to use Chebyshev UCL to estimate EPC (ITRC, 2012).
Chebyshev UCL can be computed using the Nonparametric and All UCL Options.

Nonparametric Distribution Free UCL Statistics
Data appear Normal Distributed at 5% Significance Level

Assuming Normal Distribution

95% Normal UCL		95% UCLs (Adjusted for Skewness)	
95% Student's-t UCL	41.71	95% Adjusted-CLT UCL (Chen-1995)	40.85
		95% Modified-t UCL (Johnson-1978)	41.7

Nonparametric Distribution Free UCLs

95% CLT UCL	40.95	95% Jackknife UCL	41.71
95% Standard Bootstrap UCL	40.69	95% Bootstrap-t UCL	41.32
95% Hall's Bootstrap UCL	39.97	95% Percentile Bootstrap UCL	40.7
95% BCA Bootstrap UCL	40.63		
90% Chebyshev(Mean, Sd) UCL	43.75	95% Chebyshev(Mean, Sd) UCL	46.55
97.5% Chebyshev(Mean, Sd) UCL	50.45	99% Chebyshev(Mean, Sd) UCL	58.1

Suggested UCL to Use
Data appear Normal, May want to try Normal Distribution

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

Note: For highly negatively-skewed data, confidence limits (e.g., Chen, Johnson, Lognormal, and Gamma) may not be
reliable. Chen's and Johnson's methods provide adjustments for positvely skewed data sets.

Total Number of Observations	6	Number of Distinct Observations	6
		Number of Missing Observations	0

Minimum	4.47	Mean	9.853
Maximum	35.2	Median	4.85
SD	12.42	Std. Error of Mean	5.07
Coefficient of Variation	1.26	Skewness	2.448
Mean of logged Data	1.897	SD of logged Data	0.816

Note: Sample size is small (e.g., <10), if data are collected using ISM approach
you may want to use Chebyshev UCL to estimate EPC (ITRC, 2012).
Chebyshev UCL can be computed using the Nonparametric and All UCL Options.

Nonparametric Distribution Free UCL Statistics
Data do not follow a Discernible Distribution (0.05)

Assuming Normal Distribution

95% Normal UCL		**95% UCLs (Adjusted for Skewness)**	
95% Student's-t UCL	20.07	95% Adjusted-CLT UCL (Chen-1995)	23.61
		95% Modified-t UCL (Johnson-1978)	20.91

Nonparametric Distribution Free UCLs

95% CLT UCL	18.19	95% Jackknife UCL	20.07
95% Standard Bootstrap UCL	17.33	95% Bootstrap-t UCL	753.7
95% Hall's Bootstrap UCL	419.8	95% Percentile Bootstrap UCL	19.95
95% BCA Bootstrap UCL	20.05		
90% Chebyshev(Mean, Sd) UCL	25.06	95% Chebyshev(Mean, Sd) UCL	31.95
97.5% Chebyshev(Mean, Sd) UCL	41.51	99% Chebyshev(Mean, Sd) UCL	60.3

Suggested UCL to Use

95% Chebyshev (Mean, Sd) UCL	31.95

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

PHENANTHRENE

General Statistics

Total Number of Observations	6	Number of Distinct Observations	6
		Number of Missing Observations	0
Minimum	21.7	Mean	57.08
Maximum	137	Median	46.05
SD	40.96	Std. Error of Mean	16.72
Coefficient of Variation	0.718	Skewness	1.974
Mean of logged Data	3.874	SD of logged Data	0.612

Note: Sample size is small (e.g., <10), if data are collected using ISM approach
you may want to use Chebyshev UCL to estimate EPC (ITRC, 2012).
Chebyshev UCL can be computed using the Nonparametric and All UCL Options.

Nonparametric Distribution Free UCL Statistics
Data appear Gamma Distributed at 5% Significance Level

Assuming Normal Distribution

95% Normal UCL **95% UCLs (Adjusted for Skewness)**

95% Student's-t UCL	90.78	95% Adjusted-CLT UCL (Chen-1995)	98.98
		95% Modified-t UCL (Johnson-1978)	93.02

Nonparametric Distribution Free UCLs

95% CLT UCL	84.59	95% Jackknife UCL	90.78
95% Standard Bootstrap UCL	81.49	95% Bootstrap-t UCL	135.4
95% Hall's Bootstrap UCL	216.3	95% Percentile Bootstrap UCL	87.47
95% BCA Bootstrap UCL	91.57		
90% Chebyshev(Mean, Sd) UCL	107.2	95% Chebyshev(Mean, Sd) UCL	130
97.5% Chebyshev(Mean, Sd) UCL	161.5	99% Chebyshev(Mean, Sd) UCL	223.5

Suggested UCL to Use

Data appear Gamma, May want to try Gamma Distribution

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

COPPER

General Statistics

Total Number of Observations	6	Number of Distinct Observations	5
		Number of Missing Observations	0
Minimum	12	Mean	12.93
Maximum	13.8	Median	13
SD	0.882	Std. Error of Mean	0.36
Coefficient of Variation	0.0682	Skewness	-0.0408
Mean of logged Data	2.558	SD of logged Data	0.0684

Note: Sample size is small (e.g., <10), if data are collected using ISM approach
you may want to use Chebyshev UCL to estimate EPC (ITRC, 2012).
Chebyshev UCL can be computed using the Nonparametric and All UCL Options.

Nonparametric Distribution Free UCL Statistics
Data appear Approximate Normal Distributed at 5% Significance Level

Assuming Normal Distribution

95% Normal UCL		**95% UCLs (Adjusted for Skewness)**	
95% Student's-t UCL	13.66	95% Adjusted-CLT UCL (Chen-1995)	13.52
		95% Modified-t UCL (Johnson-1978)	13.66

Nonparametric Distribution Free UCLs

95% CLT UCL	13.53	95% Jackknife UCL	13.66
95% Standard Bootstrap UCL	13.47	95% Bootstrap-t UCL	13.66
95% Hall's Bootstrap UCL	13.24	95% Percentile Bootstrap UCL	13.47
95% BCA Bootstrap UCL	13.45		
90% Chebyshev(Mean, Sd) UCL	14.01	95% Chebyshev(Mean, Sd) UCL	14.5
97.5% Chebyshev(Mean, Sd) UCL	15.18	99% Chebyshev(Mean, Sd) UCL	16.52

Suggested UCL to Use
Data appear Normal, May want to try Normal Distribution

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

Note: For highly negatively-skewed data, confidence limits (e.g., Chen, Johnson, Lognormal, and Gamma) may not be reliable. Chen's and Johnson's methods provide adjustments for positvely skewed data sets.

90% Chebyshev(Mean, Sd) UCL	16.28	95% Chebyshev(Mean, Sd) UCL	18.13
97.5% Chebyshev(Mean, Sd) UCL	20.69	99% Chebyshev(Mean, Sd) UCL	25.72

Suggested UCL to Use
Data appear Normal, May want to try Normal Distribution

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

Note: For highly negatively-skewed data, confidence limits (e.g., Chen, Johnson, Lognormal, and Gamma) may not be reliable. Chen's and Johnson's methods provide adjustments for positvely skewed data sets.

Suggested UCL to Use

Data appear Normal, May want to try Normal Distribution

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.

Recommendations are based upon data size, data distribution, and skewness.

These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).

However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

Note: For highly negatively-skewed data, confidence limits (e.g., Chen, Johnson, Lognormal, and Gamma) may not be reliable. Chen's and Johnson's methods provide adjustments for positvely skewed data sets.

95% BCA Bootstrap UCL	N/A		
90% Chebyshev(Mean, Sd) UCL	13.11	95% Chebyshev(Mean, Sd) UCL	13.5
97.5% Chebyshev(Mean, Sd) UCL	14.05	99% Chebyshev(Mean, Sd) UCL	15.12

Suggested UCL to Use

Data appear Normal, May want to try Normal Distribution

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

Note: For highly negatively-skewed data, confidence limits (e.g., Chen, Johnson, Lognormal, and Gamma) may not be reliable. Chen's and Johnson's methods provide adjustments for positvely skewed data sets.

95% Normal UCL		95% UCLs (Adjusted for Skewness)	
95% Student's-t UCL	133.6	95% Adjusted-CLT UCL (Chen-1995)	127.6
		95% Modified-t UCL (Johnson-1978)	133.7

Nonparametric Distribution Free UCLs

95% CLT UCL	126.7	95% Jackknife UCL	133.6
95% Standard Bootstrap UCL	124	95% Bootstrap-t UCL	133.7
95% Hall's Bootstrap UCL	112.5	95% Percentile Bootstrap UCL	123.9
95% BCA Bootstrap UCL	125.6		
90% Chebyshev(Mean, Sd) UCL	151.9	95% Chebyshev(Mean, Sd) UCL	177.2
97.5% Chebyshev(Mean, Sd) UCL	212.3	99% Chebyshev(Mean, Sd) UCL	281.3

Suggested UCL to Use

Data appear Normal, May want to try Normal Distribution

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

FLUORENE

General Statistics

Total Number of Observations	6	Number of Distinct Observations	6
		Number of Missing Observations	0
Minimum	0.936	Mean	1.106
Maximum	1.275	Median	1.128
SD	0.129	Std. Error of Mean	0.0528
Coefficient of Variation	0.117	Skewness	-0.146
Mean of logged Data	0.0949	SD of logged Data	0.119

Note: Sample size is small (e.g., <10), if data are collected using ISM approach you may want to use Chebyshev UCL to estimate EPC (ITRC, 2012). Chebyshev UCL can be computed using the Nonparametric and All UCL Options.

Nonparametric Distribution Free UCL Statistics

Data appear Normal Distributed at 5% Significance Level

Assuming Normal Distribution

95% Normal UCL		95% UCLs (Adjusted for Skewness)	
95% Student's-t UCL	1.212	95% Adjusted-CLT UCL (Chen-1995)	1.19
		95% Modified-t UCL (Johnson-1978)	1.212

Note: Sample size is small (e.g., <10), if data are collected using ISM approach
you may want to use Chebyshev UCL to estimate EPC (ITRC, 2012).
Chebyshev UCL can be computed using the Nonparametric and All UCL Options.

Nonparametric Distribution Free UCL Statistics
Data appear Normal Distributed at 5% Significance Level

Assuming Normal Distribution

95% Normal UCL		95% UCLs (Adjusted for Skewness)	
95% Student's-t UCL	61.38	95% Adjusted-CLT UCL (Chen-1995)	64.03
		95% Modified-t UCL (Johnson-1978)	62.55

Nonparametric Distribution Free UCLs

95% CLT UCL	56.5	95% Jackknife UCL	61.38
95% Standard Bootstrap UCL	54.53	95% Bootstrap-t UCL	116.8
95% Hall's Bootstrap UCL	246.3	95% Percentile Bootstrap UCL	55.35
95% BCA Bootstrap UCL	61.5		
90% Chebyshev(Mean, Sd) UCL	74.36	95% Chebyshev(Mean, Sd) UCL	92.26
97.5% Chebyshev(Mean, Sd) UCL	117.1	99% Chebyshev(Mean, Sd) UCL	165.9

Suggested UCL to Use

Data appear Normal, May want to try Normal Distribution

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

ZINC

General Statistics

Total Number of Observations	6	Number of Distinct Observations	5
		Number of Missing Observations	0
Minimum	4.04	Mean	37.64
Maximum	48.2	Median	43.35
SD	16.89	Std. Error of Mean	6.896
Coefficient of Variation	0.449	Skewness	-2.182
Mean of logged Data	3.39	SD of logged Data	0.981

Note: Sample size is small (e.g., <10), if data are collected using ISM approach
you may want to use Chebyshev UCL to estimate EPC (ITRC, 2012).
Chebyshev UCL can be computed using the Nonparametric and All UCL Options.

Nonparametric Distribution Free UCL Statistics
Data do not follow a Discernible Distribution (0.05)

Assuming Normal Distribution

Suggested UCL to Use

Data appear Normal, May want to try Normal Distribution

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

Chrysene

General Statistics

Total Number of Observations	6	Number of Distinct Observations	6
		Number of Missing Observations	0
Minimum	1120	Mean	2578
Maximum	4380	Median	2335
SD	1538	Std. Error of Mean	628
Coefficient of Variation	0.597	Skewness	0.166
Mean of logged Data	7.685	SD of logged Data	0.654

Note: Sample size is small (e.g., <10), if data are collected using ISM approach
you may want to use Chebyshev UCL to estimate EPC (ITRC, 2012).
Chebyshev UCL can be computed using the Nonparametric and All UCL Options.

Nonparametric Distribution Free UCL Statistics

Data appear Normal Distributed at 5% Significance Level

Suggested UCL to Use

Data appear Gamma, May want to try Gamma Distribution

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

INDENO(1,2,3-CD)PYRENE

General Statistics

Total Number of Observations	6	Number of Distinct Observations	6
		Number of Missing Observations	0
Minimum	48.7	Mean	376.9
Maximum	1490	Median	81.35
SD	573.3	Std. Error of Mean	234
Coefficient of Variation	1.521	Skewness	2.005
Mean of logged Data	5.02	SD of logged Data	1.421

Note: Sample size is small (e.g., <10), if data are collected using ISM approach
you may want to use Chebyshev UCL to estimate EPC (ITRC, 2012).
Chebyshev UCL can be computed using the Nonparametric and All UCL Options.

Nonparametric Distribution Free UCL Statistics

Data appear Gamma Distributed at 5% Significance Level

Assuming Normal Distribution

95% Normal UCL		**95% UCLs (Adjusted for Skewness)**	
95% Student's-t UCL	848.5	95% Adjusted-CLT UCL (Chen-1995)	966.6
		95% Modified-t UCL (Johnson-1978)	880.5

Nonparametric Distribution Free UCLs

95% CLT UCL	761.9	95% Jackknife UCL	848.5
95% Standard Bootstrap UCL	730.9	95% Bootstrap-t UCL	7155
95% Hall's Bootstrap UCL	4054	95% Percentile Bootstrap UCL	770.9
95% BCA Bootstrap UCL	923.3		
90% Chebyshev(Mean, Sd) UCL	1079	95% Chebyshev(Mean, Sd) UCL	1397
97.5% Chebyshev(Mean, Sd) UCL	1839	99% Chebyshev(Mean, Sd) UCL	2706

Suggested UCL to Use

Data appear Gamma, May want to try Gamma Distribution

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

NAPHTHALENE

General Statistics

Total Number of Observations	6	Number of Distinct Observations	6

		Number of Missing Observations	0
Minimum	3.93	Mean	29.09
Maximum	146	Median	4.255
SD	57.36	Std. Error of Mean	23.42
Coefficient of Variation	1.972	Skewness	2.433
Mean of logged Data	2.189	SD of logged Data	1.434

Note: Sample size is small (e.g., <10), if data are collected using ISM approach
you may want to use Chebyshev UCL to estimate EPC (ITRC, 2012).
Chebyshev UCL can be computed using the Nonparametric and All UCL Options.

Nonparametric Distribution Free UCL Statistics
Data do not follow a Discernible Distribution (0.05)

Assuming Normal Distribution

95% Normal UCL		**95% UCLs (Adjusted for Skewness)**	
95% Student's-t UCL	76.27	95% Adjusted-CLT UCL (Chen-1995)	92.46
		95% Modified-t UCL (Johnson-1978)	80.15

Nonparametric Distribution Free UCLs

95% CLT UCL	67.6	95% Jackknife UCL	76.27

Data appear Normal, May want to try Normal Distribution

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

Note: For highly negatively-skewed data, confidence limits (e.g., Chen, Johnson, Lognormal, and Gamma) may not be reliable. Chen's and Johnson's methods provide adjustments for positvely skewed data sets.

COPPER

General Statistics

Total Number of Observations	9	Number of Distinct Observations	9
		Number of Missing Observations	0
Minimum	3.545	Mean	7.85
Maximum	10.5	Median	9.53
SD	3.036	Std. Error of Mean	1.012
Coefficient of Variation	0.387	Skewness	-0.823
Mean of logged Data	1.972	SD of logged Data	0.476

Note: Sample size is small (e.g., <10), if data are collected using ISM approach you may want to use Chebyshev UCL to estimate EPC (ITRC, 2012). Chebyshev UCL can be computed using the Nonparametric and All UCL Options.

These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

Note: For highly negatively-skewed data, confidence limits (e.g., Chen, Johnson, Lognormal, and Gamma) may not be reliable. Chen's and Johnson's methods provide adjustments for positvely skewed data sets.

DIBENZ(A,H)ANTHRACENE

General Statistics

Total Number of Observations	1	Number of Distinct Observations	1
		Number of Missing Observations	0
Minimum	19.4	Mean	19.4
Maximum	19.4	Median	19.4

Warning: This data set only has 1 observations!

Data set is too small to compute reliable and meaningful statistics and estimates!

The data set for variable DIBENZ(A,H)ANTHRACENE was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!

If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

FLUORANTHENE

General Statistics

Total Number of Observations	4	Number of Distinct Observations	4
		Number of Missing Observations	0
Minimum	2.09	Mean	5.065
Maximum	12.3	Median	2.935
SD	4.847	Std. Error of Mean	2.423
Coefficient of Variation	0.957	Skewness	1.943
Mean of logged Data	1.347	SD of logged Data	0.796

Note: Sample size is small (e.g., <10), if data are collected using ISM approach
you may want to use Chebyshev UCL to estimate EPC (ITRC, 2012).
Chebyshev UCL can be computed using the Nonparametric and All UCL Options.

Nonparametric Distribution Free UCL Statistics

Data appear Gamma Distributed at 5% Significance Level

Assuming Normal Distribution

95% Normal UCL		95% UCLs (Adjusted for Skewness)	
95% Student's-t UCL	10.77	95% Adjusted-CLT UCL (Chen-1995)	11.57
		95% Modified-t UCL (Johnson-1978)	11.16

Nonparametric Distribution Free UCLs

95% CLT UCL	9.051	95% Jackknife UCL	10.77

95% Standard Bootstrap UCL	N/A	95% Bootstrap-t UCL	N/A
95% Hall's Bootstrap UCL	N/A	95% Percentile Bootstrap UCL	N/A

95% CLT UCL	6.82	95% Jackknife UCL	7.267
95% Standard Bootstrap UCL	6.671	95% Bootstrap-t UCL	57.66
95% Hall's Bootstrap UCL	50.45	95% Percentile Bootstrap UCL	7.245
95% BCA Bootstrap UCL	9.706		
90% Chebyshev(Mean, Sd) UCL	9.641	95% Chebyshev(Mean, Sd) UCL	12.47
97.5% Chebyshev(Mean, Sd) UCL	16.4	99% Chebyshev(Mean, Sd) UCL	24.11

Suggested UCL to Use

95% Hall's Bootstrap UCL	50.45

Recommended UCL exceeds the maximum observation

In Case Bootstrap t and/or Hall's Bootstrap yields an unreasonably large UCL value, use 97.5% or 99% Chebyshev (Mean, Sd) UCL

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

General Statistics

Total Number of Observations	9	Number of Distinct Observations	9
		Number of Missing Observations	0
Minimum	0.479	Mean	0.834
Maximum	1.86	Median	0.52
SD	0.519	Std. Error of Mean	0.173
Coefficient of Variation	0.623	Skewness	1.309

Note: Sample size is small (e.g., <10), if data are collected using ISM approach, you should use
guidance provided in ITRC Tech Reg Guide on ISM (ITRC, 2012) to compute statistics of interest.
For example, you may want to use Chebyshev UCL to estimate EPC (ITRC, 2012).
Chebyshev UCL can be computed using the Nonparametric and All UCL Options of ProUCL 5.1

Suggested UCL to Use

95% Student's-t UCL	31.29

When a data set follows an approximate (e.g., normal) distribution passing one of the GOF test

When applicable, it is suggested to use a UCL based upon a distribution (e.g., gamma) passing both GOF tests in ProUCL

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.

Recommendations are based upon data size, data distribution, and skewness.

These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).

However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

When a data set follows an approximate (e.g., normal) distribution passing one of the GOF test

When applicable, it is suggested to use a UCL based upon a distribution (e.g., gamma) passing both GOF tests in ProUCL

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.

Recommendations are based upon data size, data distribution, and skewness.

These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).

However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

Note: For highly negatively-skewed data, confidence limits (e.g., Chen, Johnson, Lognormal, and Gamma) may not be reliable. Chen's and Johnson's methods provide adjustments for positvely skewed data sets.

Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

ProUCL computes and outputs H-statistic based UCLs for historical reasons only.

H-statistic often results in unstable (both high and low) values of UCL95 as shown in examples in the Technical Guide.

It is therefore recommended to avoid the use of H-statistic based 95% UCLs.

Use of nonparametric methods are preferred to compute UCL95 for skewed data sets which do not follow a gamma distribution.

95% Student's-t UCL	12.27	95% Adjusted-CLT UCL (Chen-1995)	12.64
		95% Modified-t UCL (Johnson-1978)	12.42

Nonparametric Distribution Free UCLs

95% CLT UCL	11.7	95% Jackknife UCL	12.27
95% Standard Bootstrap UCL	11.53	95% Bootstrap-t UCL	14.12
95% Hall's Bootstrap UCL	9.971	95% Percentile Bootstrap UCL	11.55
95% BCA Bootstrap UCL	11.75		
90% Chebyshev(Mean, Sd) UCL	15.3	95% Chebyshev(Mean, Sd) UCL	18.91
97.5% Chebyshev(Mean, Sd) UCL	23.92	99% Chebyshev(Mean, Sd) UCL	33.77

Suggested UCL to Use

95% Hall's Bootstrap UCL	9.971

In Case Bootstrap t and/or Hall's Bootstrap yields an unreasonably large UCL value, use 97.5% or 99% Chebyshev (Mean, Sd) UCL

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

DIBENZ(A,H)ANTHRACENE

General Statistics

Total Number of Observations	9	Number of Distinct Observations	8
		Number of Missing Observations	0
Minimum	2.59	Mean	3.09
Maximum	3.265	Median	3.15
SD	0.215	Std. Error of Mean	0.0718
Coefficient of Variation	0.0697	Skewness	-1.785
Mean of logged Data	1.126	SD of logged Data	0.0736

Note: Sample size is small (e.g., <10), if data are collected using ISM approach
you may want to use Chebyshev UCL to estimate EPC (ITRC, 2012).

Chebyshev UCL can be computed using the Nonparametric and All UCL Options.

Nonparametric Distribution Free UCL Statistics

Suggested UCL to Use

Data appear Normal, May want to try Normal Distribution

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

Note: For highly negatively-skewed data, confidence limits (e.g., Chen, Johnson, Lognormal, and Gamma) may not be reliable. Chen's and Johnson's methods provide adjustments for positvely skewed data sets.

BENZ(A)ANTHRACENE

General Statistics

Total Number of Observations	9	Number of Distinct Observations	9
		Number of Missing Observations	0
Minimum	1.98	Mean	3.012
Maximum	6.1	Median	2.115
SD	1.533	Std. Error of Mean	0.511
Coefficient of Variation	0.509	Skewness	1.344
Mean of logged Data	1.007	SD of logged Data	0.442

Note: Sample size is small (e.g., <10), if data are collected using ISM approach you may want to use Chebyshev UCL to estimate EPC (ITRC, 2012). Chebyshev UCL can be computed using the Nonparametric and All UCL Options.

Suggested UCL to Use

Data appear Normal, May want to try Normal Distribution

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.

Recommendations are based upon data size, data distribution, and skewness.

These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).

However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

90% Chebyshev(Mean, Sd) UCL	9.041	95% Chebyshev(Mean, Sd) UCL	10.88
97.5% Chebyshev(Mean, Sd) UCL	13.44	99% Chebyshev(Mean, Sd) UCL	18.46

Suggested UCL to Use
Data appear Normal, May want to try Normal Distribution

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

ANTHRACENE

General Statistics

Total Number of Observations	9	Number of Distinct Observations	9
		Number of Missing Observations	0
Minimum	1.99	Mean	14.85
Maximum	24.2	Median	21.9
SD	10.28	Std. Error of Mean	3.425
Coefficient of Variation	0.692	Skewness	-0.501
Mean of logged Data	2.259	SD of logged Data	1.175

Note: Sample size is small (e.g., <10), if data are collected using ISM approach
you may want to use Chebyshev UCL to estimate EPC (ITRC, 2012).
Chebyshev UCL can be computed using the Nonparametric and All UCL Options.

Nonparametric Distribution Free UCL Statistics
Data do not follow a Discernible Distribution (0.05)

Assuming Normal Distribution

95% Normal UCL		95% UCLs (Adjusted for Skewness)	

95% Student's-t UCL	21.22	95% Adjusted-CLT UCL (Chen-1995)	19.87
		95% Modified-t UCL (Johnson-1978)	21.12

Nonparametric Distribution Free UCLs

95% CLT UCL	20.48	95% Jackknife UCL	21.22
95% Standard Bootstrap UCL	20.04	95% Bootstrap-t UCL	20.73
95% Hall's Bootstrap UCL	19.21	95% Percentile Bootstrap UCL	20.23
95% BCA Bootstrap UCL	19.43		
90% Chebyshev(Mean, Sd) UCL	25.13	95% Chebyshev(Mean, Sd) UCL	29.78
97.5% Chebyshev(Mean, Sd) UCL	36.24	99% Chebyshev(Mean, Sd) UCL	48.93

Suggested UCL to Use

95% Hall's Bootstrap UCL 19.21

In Case Bootstrap t and/or Hall's Bootstrap yields an unreasonably large UCL value, use 97.5% or 99% Chebyshev (Mean, Sd) UCL

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

Note: For highly negatively-skewed data, confidence limits (e.g., Chen, Johnson, Lognormal, and Gamma) may not be reliable. Chen's and Johnson's methods provide adjustments for positvely skewed data sets.

90% Chebyshev(Mean, Sd) UCL	9.122	95% Chebyshev(Mean, Sd) UCL	10.35
97.5% Chebyshev(Mean, Sd) UCL	12.06	99% Chebyshev(Mean, Sd) UCL	15.42

Suggested UCL to Use

Data appear Normal, May want to try Normal Distribution

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

Note: For highly negatively-skewed data, confidence limits (e.g., Chen, Johnson, Lognormal, and Gamma) may not be reliable. Chen's and Johnson's methods provide adjustments for positvely skewed data sets.

95% Normal UCL		**95% UCLs (Adjusted for Skewness)**	
95% Student's-t UCL	14.2	95% Adjusted-CLT UCL (Chen-1995)	14.46
		95% Modified-t UCL (Johnson-1978)	14.34

Nonparametric Distribution Free UCLs

95% CLT UCL	13.58	95% Jackknife UCL	14.2
95% Standard Bootstrap UCL	13.17	95% Bootstrap-t UCL	15.41
95% Hall's Bootstrap UCL	12.44	95% Percentile Bootstrap UCL	13.2
95% BCA Bootstrap UCL	14.38		
90% Chebyshev(Mean, Sd) UCL	17.48	95% Chebyshev(Mean, Sd) UCL	21.39
97.5% Chebyshev(Mean, Sd) UCL	26.82	99% Chebyshev(Mean, Sd) UCL	37.48

Suggested UCL to Use

Data appear Approximate Gamma, May want to try Gamma Distribution

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

Total Number of Observations	9	Number of Distinct Observations	8
		Number of Missing Observations	0
Minimum	3	Mean	18.67
Maximum	103	Median	4.1
SD	33.17	Std. Error of Mean	11.06
Coefficient of Variation	1.776	Skewness	2.564
Mean of logged Data	2.009	SD of logged Data	1.252

Note: Sample size is small (e.g., <10), if data are collected using ISM approach
you may want to use Chebyshev UCL to estimate EPC (ITRC, 2012).
Chebyshev UCL can be computed using the Nonparametric and All UCL Options.

Nonparametric Distribution Free UCL Statistics
Data do not follow a Discernible Distribution (0.05)

Assuming Normal Distribution

95% Normal UCL		**95% UCLs (Adjusted for Skewness)**	
95% Student's-t UCL	39.23	95% Adjusted-CLT UCL (Chen-1995)	46.96
		95% Modified-t UCL (Johnson-1978)	40.81

Nonparametric Distribution Free UCLs

95% CLT UCL	36.86	95% Jackknife UCL	39.23
95% Standard Bootstrap UCL	35.57	95% Bootstrap-t UCL	287.2
95% Hall's Bootstrap UCL	200.8	95% Percentile Bootstrap UCL	37.69
95% BCA Bootstrap UCL	48.12		
90% Chebyshev(Mean, Sd) UCL	51.84	95% Chebyshev(Mean, Sd) UCL	66.87
97.5% Chebyshev(Mean, Sd) UCL	87.72	99% Chebyshev(Mean, Sd) UCL	128.7

Suggested UCL to Use

95% Hall's Bootstrap UCL	200.8

Recommended UCL exceeds the maximum observation

In Case Bootstrap t and/or Hall's Bootstrap yields an unreasonably large UCL value, use 97.5% or 99% Chebyshev (Mean, Sd) UCL

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

97.5% Chebyshev(Mean, Sd) UCL	32.4	99% Chebyshev(Mean, Sd) UCL	45.27

Suggested UCL to Use

Data appear Approximate Lognormal, May want to try Lognormal Distribution

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

Maximum	16.3	Median	15.3
SD	1.229	Std. Error of Mean	0.41
Coefficient of Variation	0.0823	Skewness	-0.699
Mean of logged Data	2.7	SD of logged Data	0.0845

Note: Sample size is small (e.g., <10), if data are collected using ISM approach
you may want to use Chebyshev UCL to estimate EPC (ITRC, 2012).
Chebyshev UCL can be computed using the Nonparametric and All UCL Options.

Nonparametric Distribution Free UCL Statistics

Data appear Normal Distributed at 5% Significance Level

Assuming Normal Distribution

95% Normal UCL		95% UCLs (Adjusted for Skewness)	
95% Student's-t UCL	15.7	95% Adjusted-CLT UCL (Chen-1995)	15.51
		95% Modified-t UCL (Johnson-1978)	15.68

Nonparametric Distribution Free UCLs

95% CLT UCL	15.61	95% Jackknife UCL	15.7
95% Standard Bootstrap UCL	15.57	95% Bootstrap-t UCL	15.59
95% Hall's Bootstrap UCL	15.5	95% Percentile Bootstrap UCL	15.56
95% BCA Bootstrap UCL	15.52		
90% Chebyshev(Mean, Sd) UCL	16.16	95% Chebyshev(Mean, Sd) UCL	16.72
97.5% Chebyshev(Mean, Sd) UCL	17.49	99% Chebyshev(Mean, Sd) UCL	19.01

Suggested UCL to Use

Data appear Normal, May want to try Normal Distribution

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

Note: For highly negatively-skewed data, confidence limits (e.g., Chen, Johnson, Lognormal, and Gamma) may not be reliable. Chen's and Johnson's methods provide adjustments for positvely skewed data sets.

95% Hall's Bootstrap UCL	12.06	95% Percentile Bootstrap UCL	12.3
95% BCA Bootstrap UCL	13.36		
90% Chebyshev(Mean, Sd) UCL	16.49	95% Chebyshev(Mean, Sd) UCL	20.39
97.5% Chebyshev(Mean, Sd) UCL	25.81	99% Chebyshev(Mean, Sd) UCL	36.45

Suggested UCL to Use

95% Hall's Bootstrap UCL	12.06

In Case Bootstrap t and/or Hall's Bootstrap yields an unreasonably large UCL value, use 97.5% or 99% Chebyshev (Mean, Sd) UCL

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

95% BCA Bootstrap UCL	136.6		
90% Chebyshev(Mean, Sd) UCL	171.2	95% Chebyshev(Mean, Sd) UCL	213.4
97.5% Chebyshev(Mean, Sd) UCL	271.9	99% Chebyshev(Mean, Sd) UCL	386.9

Suggested UCL to Use

Data appear Normal, May want to try Normal Distribution

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

COPPER

General Statistics

Total Number of Observations	9	Number of Distinct Observations	8
		Number of Missing Observations	0
Minimum	13.2	Mean	20.98

Maximum	60.6	Median	14.1
SD	15.34	Std. Error of Mean	5.114
Coefficient of Variation	0.731	Skewness	2.674
Mean of logged Data	2.9	SD of logged Data	0.498

Note: Sample size is small (e.g., <10), if data are collected using ISM approach
you may want to use Chebyshev UCL to estimate EPC (ITRC, 2012).
Chebyshev UCL can be computed using the Nonparametric and All UCL Options.

Nonparametric Distribution Free UCL Statistics

These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

Note: For highly negatively-skewed data, confidence limits (e.g., Chen, Johnson, Lognormal, and Gamma) may not be reliable. Chen's and Johnson's methods provide adjustments for positvely skewed data sets.

Chebyshev UCL can be computed using the Nonparametric and All UCL Options.

Nonparametric Distribution Free UCL Statistics
Data appear Approximate Normal Distributed at 5% Significance Level

Assuming Normal Distribution

95% Normal UCL		**95% UCLs (Adjusted for Skewness)**	
95% Student's-t UCL	130.6	95% Adjusted-CLT UCL (Chen-1995)	141.1
		95% Modified-t UCL (Johnson-1978)	133.3

Nonparametric Distribution Free UCLs

95% CLT UCL	124	95% Jackknife UCL	130.6
95% Standard Bootstrap UCL	121.8	95% Bootstrap-t UCL	173.1
95% Hall's Bootstrap UCL	185.7	95% Percentile Bootstrap UCL	124.4
95% BCA Bootstrap UCL	137.5		
90% Chebyshev(Mean, Sd) UCL	165.8	95% Chebyshev(Mean, Sd) UCL	207.7
97.5% Chebyshev(Mean, Sd) UCL	265.9	99% Chebyshev(Mean, Sd) UCL	380.2

Suggested UCL to Use

Data appear Normal, May want to try Normal Distribution

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

COPPER

General Statistics

Total Number of Observations	9	Number of Distinct Observations	9
		Number of Missing Observations	0
Minimum	11.7	Mean	12.76
Maximum	13.8	Median	12.8
SD	0.806	Std. Error of Mean	0.269
Coefficient of Variation	0.0632	Skewness	-0.178
Mean of logged Data	2.544	SD of logged Data	0.0636

Note: Sample size is small (e.g., <10), if data are collected using ISM approach
you may want to use Chebyshev UCL to estimate EPC (ITRC, 2012).
Chebyshev UCL can be computed using the Nonparametric and All UCL Options.

Nonparametric Distribution Free UCL Statistics
Data appear Normal Distributed at 5% Significance Level

Assuming Normal Distribution

95% Normal UCL		**95% UCLs (Adjusted for Skewness)**	
95% Student's-t UCL	13.26	95% Adjusted-CLT UCL (Chen-1995)	13.18
		95% Modified-t UCL (Johnson-1978)	13.25

Nonparametric Distribution Free UCLs

95% CLT UCL	13.2	95% Jackknife UCL	13.26
95% Standard Bootstrap UCL	13.18	95% Bootstrap-t UCL	13.25
95% Hall's Bootstrap UCL	13.12	95% Percentile Bootstrap UCL	13.17
95% BCA Bootstrap UCL	13.16		
90% Chebyshev(Mean, Sd) UCL	13.56	95% Chebyshev(Mean, Sd) UCL	13.93
97.5% Chebyshev(Mean, Sd) UCL	14.43	99% Chebyshev(Mean, Sd) UCL	15.43

Suggested UCL to Use
Data appear Normal, May want to try Normal Distribution

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

Note: For highly negatively-skewed data, confidence limits (e.g., Chen, Johnson, Lognormal, and Gamma) may not be reliable. Chen's and Johnson's methods provide adjustments for positvely skewed data sets.

SD	12.87	Std. Error of Mean	4.289
Coefficient of Variation	0.994	Skewness	1.233
Mean of logged Data	2.115	SD of logged Data	1.005

Note: Sample size is small (e.g., <10), if data are collected using ISM approach
you may want to use Chebyshev UCL to estimate EPC (ITRC, 2012).
Chebyshev UCL can be computed using the Nonparametric and All UCL Options.

Nonparametric Distribution Free UCL Statistics
Data appear Approximate Normal Distributed at 5% Significance Level

Assuming Normal Distribution

95% Normal UCL		**95% UCLs (Adjusted for Skewness)**	
95% Student's-t UCL	20.92	95% Adjusted-CLT UCL (Chen-1995)	21.88
		95% Modified-t UCL (Johnson-1978)	21.21

Nonparametric Distribution Free UCLs

95% CLT UCL	20	95% Jackknife UCL	20.92
95% Standard Bootstrap UCL	19.49	95% Bootstrap-t UCL	29.52
95% Hall's Bootstrap UCL	30.15	95% Percentile Bootstrap UCL	19.98
95% BCA Bootstrap UCL	21.45		
90% Chebyshev(Mean, Sd) UCL	25.81	95% Chebyshev(Mean, Sd) UCL	31.64
97.5% Chebyshev(Mean, Sd) UCL	39.73	99% Chebyshev(Mean, Sd) UCL	55.61

Suggested UCL to Use
Data appear Normal, May want to try Normal Distribution

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

Data appear Normal, May want to try Normal Distribution

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

Suggested UCL to Use
Data appear Normal, May want to try Normal Distribution

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

ZINC

General Statistics

Total Number of Observations	9	Number of Distinct Observations	9
		Number of Missing Observations	0
Minimum	45	Mean	65.69
Maximum	111	Median	50.1
SD	24.43	Std. Error of Mean	8.145
Coefficient of Variation	0.372	Skewness	1.036
Mean of logged Data	4.13	SD of logged Data	0.341

Note: Sample size is small (e.g., <10), if data are collected using ISM approach
you may want to use Chebyshev UCL to estimate EPC (ITRC, 2012).
Chebyshev UCL can be computed using the Nonparametric and All UCL Options.

Nonparametric Distribution Free UCL Statistics
Data do not follow a Discernible Distribution (0.05)

97.5% Chebyshev(Mean, Sd) UCL	63.07	99% Chebyshev(Mean, Sd) UCL	71.78

Suggested UCL to Use

Data appear Normal, May want to try Normal Distribution

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).

However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

97.5% Chebyshev(Mean, Sd) UCL	15.91	99% Chebyshev(Mean, Sd) UCL	22.91

Suggested UCL to Use

Data appear Approximate Lognormal, May want to try Lognormal Distribution

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

COPPER

General Statistics

Total Number of Observations	15	Number of Distinct Observations	14
		Number of Missing Observations	0
Minimum	1.38	Mean	11.86
Maximum	16.6	Median	13
SD	4.328	Std. Error of Mean	1.118
Coefficient of Variation	0.365	Skewness	-1.029
Mean of logged Data	2.352	SD of logged Data	0.628

Nonparametric Distribution Free UCL Statistics

Data appear Normal Distributed at 5% Significance Level

Assuming Normal Distribution

95% Normal UCL		**95% UCLs (Adjusted for Skewness)**	
95% Student's-t UCL	13.82	95% Adjusted-CLT UCL (Chen-1995)	13.38
		95% Modified-t UCL (Johnson-1978)	13.78

Nonparametric Distribution Free UCLs

95% CLT UCL	13.69	95% Jackknife UCL	13.82
95% Standard Bootstrap UCL	13.65	95% Bootstrap-t UCL	13.65
95% Hall's Bootstrap UCL	13.43	95% Percentile Bootstrap UCL	13.49
95% BCA Bootstrap UCL	13.36		
90% Chebyshev(Mean, Sd) UCL	15.21	95% Chebyshev(Mean, Sd) UCL	16.73
97.5% Chebyshev(Mean, Sd) UCL	18.84	99% Chebyshev(Mean, Sd) UCL	22.98

Suggested UCL to Use

Data appear Normal, May want to try Normal Distribution

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

Note: For highly negatively-skewed data, confidence limits (e.g., Chen, Johnson, Lognormal, and Gamma) may not be

reliable. Chen's and Johnson's methods provide adjustments for positvely skewed data sets.

Nonparametric Distribution Free UCLs

95% CLT UCL	11.67	95% Jackknife UCL	11.74
95% Standard Bootstrap UCL	11.65	95% Bootstrap-t UCL	11.84
95% Hall's Bootstrap UCL	11.93	95% Percentile Bootstrap UCL	11.61
95% BCA Bootstrap UCL	11.66		
90% Chebyshev(Mean, Sd) UCL	12.09	95% Chebyshev(Mean, Sd) UCL	12.51
97.5% Chebyshev(Mean, Sd) UCL	13.09	99% Chebyshev(Mean, Sd) UCL	14.23

Suggested UCL to Use

Data appear Normal, May want to try Normal Distribution

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

ZINC

General Statistics

Total Number of Observations	9	Number of Distinct Observations	9
		Number of Missing Observations	0

Minimum	44.9	Mean	48.47
Maximum	52	Median	48.6
SD	2.355	Std. Error of Mean	0.785
Coefficient of Variation	0.0486	Skewness	-0.0423
Mean of logged Data	3.88	SD of logged Data	0.0487

Note: Sample size is small (e.g., <10), if data are collected using ISM approach you may want to use Chebyshev UCL to estimate EPC (ITRC, 2012). Chebyshev UCL can be computed using the Nonparametric and All UCL Options.

Nonparametric Distribution Free UCL Statistics

Data appear Normal Distributed at 5% Significance Level

Assuming Normal Distribution

95% Normal UCL		**95% UCLs (Adjusted for Skewness)**	
95% Student's-t UCL	49.93	95% Adjusted-CLT UCL (Chen-1995)	49.75
		95% Modified-t UCL (Johnson-1978)	49.92

Nonparametric Distribution Free UCLs

95% CLT UCL	49.76	95% Jackknife UCL	49.93
95% Standard Bootstrap UCL	49.66	95% Bootstrap-t UCL	49.97
95% Hall's Bootstrap UCL	49.81	95% Percentile Bootstrap UCL	49.71
95% BCA Bootstrap UCL	49.7		
90% Chebyshev(Mean, Sd) UCL	50.82	95% Chebyshev(Mean, Sd) UCL	51.89
97.5% Chebyshev(Mean, Sd) UCL	53.37	99% Chebyshev(Mean, Sd) UCL	56.28

Suggested UCL to Use

Data appear Normal, May want to try Normal Distribution

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

Note: For highly negatively-skewed data, confidence limits (e.g., Chen, Johnson, Lognormal, and Gamma) may not be reliable. Chen's and Johnson's methods provide adjustments for positvely skewed data sets.

Suggested UCL to Use

Data appear Approximate Gamma, May want to try Gamma Distribution

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

PYRENE

General Statistics

Total Number of Observations	9	Number of Distinct Observations	9
		Number of Missing Observations	0
Minimum	28.1	Mean	517.6
Maximum	2770	Median	99.4
SD	908	Std. Error of Mean	302.7
Coefficient of Variation	1.754	Skewness	2.387
Mean of logged Data	5.177	SD of logged Data	1.451

Note: Sample size is small (e.g., <10), if data are collected using ISM approach
you may want to use Chebyshev UCL to estimate EPC (ITRC, 2012).
Chebyshev UCL can be computed using the Nonparametric and All UCL Options.

Nonparametric Distribution Free UCL Statistics

Exhibit 4 Evaluation of Prior RI Parcel Sites

From 2014 through 2017, additional parcels were investigated. The results of these investigation are reported in the Remedial Investigation.

Data from these investigations were evaluated similar to the methods presented in the HHRA, however, data were not treated to represent the depths of concern evaluated in the HHRA (i.e. 0-1 foot bgs, and all depths). Alternatively, health impacts were assessed for each interval sampled. These intervals are referred to as Decision Units, or DUs. The variation in risk assessment methods as compared to the January to October 2019 data is due a mixture of sampling methods used for surface sampling from 2014 to 2017 (not all parcels were sampled in ISM triplicates for surface samples).

As presented in the RI, the 95% Upper Confidence Level (UCL) for each DU at each parcel was calculated and used to estimate potential health impacts. The use of the UCL provides protection against underestimation, but it may also overestimate the true mean (ITRC, 2020).Table 1 summarizes the incremental lifetime cancer risks and noncarcinogenic hazards, and Table 2 summarizes the lead indices for the parcels characterized from 2014 to 2017.

TABLE

ABBREVIATIONS AND ACRONYMS

%D	percent difference
%R	percent recovery
%RSD	percent relative standard deviation
APN	Assessor's Parcel Number
bgs	below ground surface
CoC	chain-of-custody
COPC	chemical of potential concern
DoD	Department of Defense
DU	Decision Unit
EB	equipment blank
FS	Feasibility Study
GPS	Global Positioning System
GTG	Ground-to-Ground
ISM	incremental sampling method
ITRC	Interstate Technology & Regulatory Council
LCS	laboratory control sample
LOQ	limit of quantitation
MRS	Munitions Response Site
MS/MSD	matrix spike and matrix spike duplicate
NOREAS	NOREAS, Inc.
PAHs	polycyclic aromatic hydrocarbons
QA	quality assurance
QAPP	Quality Assurance Project Plan
QC	quality control
QCSB	quality control source blank
RI	remedial investigation
RPD	relative percent difference
SIM	selected ion mode
TestAmerica	TestAmerica Laboratories, Inc.

C.1.0 INTRODUCTION

This appendix describes the quality and usability of analytical data collected for the remedial investigation (RI) activities conducted at the Former Skeet Range Munitions Response Site 03 (MRS03), Kingman Ground-to-Ground (GTG) Gunnery Range, (the MRS03 Site) in Kingman, Mohave County, Arizona. Data were collected during RI soil sampling using the incremental sampling method (ISM) at each parcel [identified by its unique assessor parcel number (APN)]. Soil sampling activities were conducted from January 15, 2019 through October 31, 2019 and followed the procedures specified in the *Final Remedial Investigation (RI) and Feasibility Study (FS) Work Plan, Formerly Used Defense Site, Military Munitions Response Program, MRS03-15 Skeet Ranges, Former Kingman Ground-to-Ground (GTG) Gunnery Range, Kingman, Mohave County, Arizona, Formerly Used Defense Site Property No. J09AZ041201* (Eco, 2014) (project Work Plan), as amended by the *Final Uniform Federal Policy Quality Assurance Project Plan Addendum No. 1 Remedial Investigation of Former Skeet Range MRS03, Kingman Ground-To-Ground Gunnery Range, Mohave County, Arizona* (NOREAS, 2018) (project QAPP).

The data quality evaluation was determined based on verification of field and laboratory quality assurance (QA)/quality control (QC) samples collected and analyzed during this project. QA/QC for field activities was ensured through rigorous documentation, equipment calibration (where applicable), and the collection of field QC samples. Additionally, QC analyses were performed by the analytical laboratory to determine analytical precision and accuracy of the analyses determined by laboratory control samples (LCSs), matrix spike and matrix spike duplicate (MS/MSD) samples, matrix duplicates, and surrogate spikes. In addition, results from method blanks were evaluated to assess the possibility of contamination of environmental samples that may have been introduced during sampling and laboratory activities. All analyses were performed in accordance with the Final QAPP (NOREAS, 2018) and the DoD QSM version 5.1 (DoD, 2017) requirements. For this project, polycyclic aromatic hydrocarbons (PAHs) and metals: antimony, copper, lead, and zinc are considered the contaminants of potential concern (COPCs). COPCs were reported in mg/kg for metals and in µg/kg for PAHs.

All soil investigational samples collected during this project were submitted under documented chain-of-custody (COC) procedures to Eurofins Environment Testing TestAmerica's Irvine, California facility. The Irvine facility repackaged samples for shipping to the Eurofins Environment Testing TestAmerica's Arvada, Colorado (Eurofins TestAmerica) facility, which maintains current Department of Defense (DoD) Environmental Laboratory Accreditation Program (ELAP) accreditations.

Environmental samples were processed using the ISM procedure and analyzed for PAHs by United States Environmental Protection Agency (USEPA) Method 8270C selected ion mode (SIM), and for the metals: antimony, copper, lead, and zinc by USEPA Method 6010B. Soil samples received at the laboratory were dried, mechanically ground, and incrementally sampled followed by digestion according to laboratory SOPs and analytical method. The soil samples for PAHs were processed through the same ISM procedure except for the grinding step as documented in the Field Change Request Form (FCRF)-001 (NOREAS, 2019a). Following ISM, samples were extracted and analyzed according to EPA method 8270C using gas chromatography/mass spectrometer (GC/MS) in SIM mode.

A third-party validation firm, Synectics in Sacramento, California, performed data validation on the chemical analyses for the project samples, as discussed in Section C5.0.

The chain-of-custody records, laboratory analytical results, and data validation reports are provided in Attachment 1 of the RI Report as a part of the parcel reports.

C2.0 FIELD DOCUMENTATION

A number of QA/QC measures were employed in the field to ensure that the environmental samples collected were representative of site conditions at the time of sampling. Field equipment was documented in a field notebook and field forms. Field documentation protocols included use of a field notebook, APN (parcel) field log form, photographic documentation of field sampling, global positioning system (GPS) coordinates of the parcel and sampling locations and COC forms. The GPS survey data, field logs, and photographic logs for each parcel are presented as a part of the respective parcel report in Attachment 1, in the Remedial Investigation Report.

This page is intentionally left blank.

C.3.0 FIELD QUALITY CONTROL SAMPLES

In addition to the soil samples, field QC samples were collected and analyzed as specified in the Work Plan (Eco, 2014) and Final QAPP Addendum (NOREAS, 2018). During the RI, 74 equipment blanks were collected and analyzed. In addition, MS/MSDs were also collected and analyzed at a rate of 1 per 20 field samples as specified in the Final QAPP Addendum (NOREAS, 2018). To ensure data comparability, ISM sampling procedures of soil samples were followed using guidelines from the United States Army Corp of Engineer (USACE) guidelines (USACE, 2009) and the Interstate Technology & Regulatory Council (ITRC) guidance (ITRC, 2012), and analytical processes followed standardized protocols and published EPA analytical methods identical to the original field samples.

C3.1 Equipment (Rinsate) Blanks

During this RI, 74 quality control equipment blank (EB) samples were collected and analyzed to evaluate the possibility of cross-contamination resulting from sampling equipment and activities. In accordance with the Final QAPP Addendum (NOREAS, 2018), an equipment rinsate was collected at the completion of each parcel sampled by washing the laboratory-provided rinse water over the cleaned hand auger bucket into the sample containers. Equipment blanks were submitted for analysis for PAHs by EPA Method 8270C SIM, and for the metals: antimony, copper, lead and zinc by EPA Method 6010B. Data validation reported the following:

- Trace concentrations of copper, lead, or zinc was detected in five EB samples.
- Trace concentrations of select PAHs (e.g., Benzo(a)pyrene, benzo(g,h,i)perylene, and benzo(k)fluoranthene) were detected in eight EB samples.
- Extraction holding time requirements were exceeded for PAHs in 18 EB samples.
- Samples designated as EB-030519 (APN 32405168), EB-030619 (APN 32404487), and EB-040919 (APN 32437016) were qualified as rejected for gross (greater than 2 times) holding time exceedance.
- Data for select PAHs were rejected (R-qualified) for EB-030619 (32404487) due to low surrogate or laboratory control sample recoveries indicating potential negative bias in results.

Concentrations of these detected analytes in the associated samples were adjusted to “estimated,” “non-detected estimated,” or “non-detect” as appropriate.

Relevant data validation qualifiers (i.e. “J”; “UJ”; “U”; “R”) are defined in Section C5.0 and data validation reports provided in Appendix B. A summary of the validation of equipment blanks collected by sample ID and associated parcel APN, analyte contaminants, limits of quantitation (LOQs), analytical results and qualified final results is provided in Table C-1 and C-2, respectively.

C3.2 Field Duplicates/Triplicates

The purpose of field duplicate samples is to evaluate the precision of the overall sample collection and analysis processes by calculating the relative percent difference (RPD) for duplicate sample concentration. A field duplicate consists of two collocated samples of the same matrix collected at the same time and location, to the extent possible, using the same sampling techniques.

In accordance with the Final QAPP Addendum field duplicates were not collected as triplicate ISM samples were collected at each Decision Unit (DU)/parcel sampling grid. Soil samples were collected from each DU as 3 replicates to represent the surface soils (0- to 2-inches), and as 3 replicates for the subsurface soils [0- to 1 foot below ground surface (bgs); 1- to 2 feet bgs, and if required, 2- to 3 feet bgs, 3- to 4-feet bgs] The sampling process was repeated for the two subsequent replicate samples used the same sampling techniques, and collected at the same time and location.

C3.3 Matrix Spike and Matrix Spike Duplicate Samples

MS/MSD samples are prepared for chemical analysis by spiking the sample with a known amount of a target analyte. Following spike addition, the sample is carried through the complete sample preparation process along with the other samples in the batch. The percent recoveries (%Rs) for the MS/MSD samples are compared against each other and against the known amount of the spike to determine the accuracy (bias) of the analytical process. RPD from the MS/MSD samples is also calculated to evaluate the precision of the analytical process. For this project, one MS/MSD sample was collected for approximately every 20 soil samples. An evaluation is presented in Section C4.0.

C4.0 LABORATORY QUALITY CONTROL

Laboratory QC samples were prepared and analyzed by the laboratory to monitor the analytical accuracy and precision processes. The laboratory analyzed all QC samples at the method-required frequencies and as specified in the project-specific Final QAPP Addendum (NOREAS, 2018) and DoD QSM version 5.1 (DoD, 2017). The laboratory QC samples for this project included method blanks, initial and continuing calibration blanks, LCSs, initial and continuing calibration verifications, second source calibration verification standards (PAHs only), surrogate spikes, interference check standards (metals only), and MS/MSD samples.

Laboratory QC analyses were within the project-specified or method criteria except for the following constituents and samples:

Synectics #280-122201-1

Lab Work Order# J122201-1: (APN 31021063)

<u>PAHs by EPA Method 8270C SIM</u>

- MS/MSD, and/or triplicate recoveries were outside control limits for select PAHs in affected samples MRS03-APN31021063-SS001, -SS002, and -SS003, which were qualified using a “J/UJ”.

<u>Metals by EPA Method 6010B</u>

- MS recoveries outside control limits for antimony, copper, lead, and zinc in affected samples MRS03-APN31021063-SS001, -SS002, -SS003, -SS1001, -SS1002, and -SS1003. Antimony in affected samples MRS03-APN31021063-SS001, -SS002, and SS003 was qualified as “R” (rejected) due to low MS/MSD recoveries. Copper, lead, and zinc in affected samples MRS03-APN31021063-SS001, -SS002, and -SS003 were qualified using a “J”.

Synectics #280-121928-1

Lab Work Order# J121928-1: (APN 31021078)

<u>PAHs by EPA Method 8270C SIM</u>

- Surrogate recoveries exceeded control limits for PAHs in affected sample MRS03-APN31021078-SS001 were qualified using a “J/UJ”.
- MS recoveries outside control limits for benzo(a)pyrene, benzo(b)fluoranthene, benzo(g,h,i)perylene, chrysene, dibenz(a,h)anthracene, fluoranthene, indeno(1,2,3-c,d)pyrene, and pyrene in affected samples MRS03-APN31021078-SS001, -SS002, and -SS003 were qualified using a “J” for detected results.

<u>Metals by EPA Method 6010B</u>

- Copper detected in method grinding blank in affected samples MRS03-APN31021078-SS001, -SS002, -SS003, -SS1001, -SS1002, -SS1003, -SS2001, -SS2002, and -SS2003 were qualified using a “UJ” for detected results.

- MS, MSD, and/or triplicate recoveries were outside control limits for antimony, lead, and zinc in affected samples MRS03-APN31021078-SS1001, -SS1002, and -SS1003. MS recoveries for antimony and zinc in affected samples MRS03-APN31021078-SS1001, -SS1002, and -SS1003 were qualified using a "UJ" for antimony and a "J" for zinc in detected results. MS/MSD and/or triplicate recoveries outside control limits for lead in affected samples MRS03-APN31021078-SS1001, -SS1002, and -SS1003 were qualified using a "J" for detected results.

Synectics #280-123705-1 and #280-124-364-1

Lab Work Order# J123705/J124364: (APN 31021080)

Metals by EPA Method 6010B

- Copper and lead found in the grinding blank in affected samples MRS03-APN31021080-SS001 through -SS003, -SS1001 through -SS1003, and -SS2001 through -SS2003, were qualified using a "J/UJ".
- MS/MSD recoveries outside control limits for antimony, lead, and zinc in affected samples MRS03-APN31021080-SS1001, -SS1002, and -SS1003, were qualified using a "J/UJ" for antimony, lead and zinc.

Synectics #280-121679-1

Lab Work Order# J121679-1: (APN 31038002)

PAHs by EPA Method 8270C SIM

- Surrogate recoveries were outside of the project limits in sample MRS03-APN31038003 for select PAHs. Results were qualified using "J" for detected results and "UJ" for not detected.
- Prep holding times outside project limits in samples sample MRS03-APN31038002, -SS002, -SS1001, and 1002 for PAHs were qualified using a "J/UJ".

Metals by EPA Method 6010B

- MS recoveries outside control limits for antimony and lead in affected samples MRS03-APN31038002-SS1001, -SS1002, and -SS1003 were qualified using a "J/UJ" for antimony and lead.

Synectics #280-124017-1

Lab Work Order# J124017-1: (APN 32404213)

PAHs by EPA Method 8270C SIM

- MS/MSD, MS/MSD RPD, LCS/LCSD, RPD, and surrogate recoveries were outside control limits due to samples prepared one day outside holding times in affected samples MRS03-APN32404213-SS001, -SS002, and-SS003. All PAHs were qualified using a "J" for detected results.

Metals by EPA Method 6010B

- Copper, lead, and zinc detected in method grinding blank in affected samples MRS03-APN32404213-SS001, -SS002, and-SS003 were qualified using a "J" for detected results.

- MS and MSD outside control limits for antimony in affected samples MRS03-APN32404213-SS1001, -SS1002, and -SS1003 were qualified using a "UJ".

Synectics #280-120010-1

Lab Work Order# J120010-1: (APN 32404241)

<u>PAHs by EPA Method 8270C SIM</u>

- Surrogate recoveries were outside project limits in sample MRS03-APN32404241- SS001, for all PAHs analyzed were qualified using "J/UJ".

<u>Metals by EPA Method 6010B</u>

- Trace values of copper and lead were detected in the laboratory blank. Copper in samples MRS03-APN32404241-SS001, -SS002, -SS003, SS1001, -SS1002, -SS1003, -SS2001, -SS2002, and -SS2003 were qualified using a "J". Lead in samples MRS03-APN32404241-SS2001, -SS2002, and -SS2003 were qualified using a "J".

Synectics #280-120009-1

Lab Work Order# J120009-1: (APN 32404242)

<u>PAHs by EPA Method 8270C SIM</u>

- Laboratory triplicate RSD was above the control limits for benzo(b)fluoranthene, chrysene, fluoranthene, and naphthalene in sample MRS03-APN32404242- SS1003 for which the results were qualified using a "J."
- Surrogate recoveries were outside project limits in sample MRS03-APN32404242- SS1003, for four PAHs. Data were qualified using a "J".
- Method holding time was slightly exceeded for EB-020519 resulting in UJ qualification for all PAHs.

<u>Metals by EPA Method 6010B</u>

- Trace values of copper and lead were found in the laboratory blank. Copper in affected samples MRS03-APN32404242-SS001, -SS002, SS1001, -SS1002, -SS1003, -SS2001, -SS2002, and -SS2003 were qualified using a "J" for detected results. Lead in affected samples MRS03-APN32404242-SS2001, -SS2002, and -SS2003 were qualified using a "J" for detected results.
- MS was recovered below the project limits for antimony and zinc in samples MRS03-APN32404242-SS1001. Antimony was qualified "R" (rejected) for not detected results and zinc was qualified using a "J".
- MS was recovered slightly below the project limits for copper. Parent (spiked) samples was qualified using a "J" for detected results.

Synectics #280-120732-1

Lab Work Order# J120009-1: (APN 32404279)

<u>PAHs by EPA Method 8270C SIM</u>

- Surrogate recoveries outside project limits in sample MRS03-APN32404279-SS001 for all PAHs analyzed and were qualified using "J/UJ".

<u>Metals by EPA Method 6010B</u>

- Trace concentrations of copper and lead were found in the laboratory blank. Copper in affected samples MRS03-APN32404279-SS001, -SS002, and -SS003 and lead in sample MRS03-APN32404279-SS003 were qualified using a "J" for detected results.

Synectics #280-120736-1

Lab Work Order# J120736-1: (APN 32404280)

<u>PAHs by EPA Method 8270C SIM</u>

- Triplicate RSDS outside control limits for benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(g,h,i)perylene, chrysene, fluoranthene, indeno(1,2,3-c,d)pyrene, phenanthrene, and pyrene were qualified using "J" in samples MRS03-APN32404280-SS001, and -SS002.

- Surrogate recoveries were outside project limits in samples MRS03-APN32404280-SS002, and -SS2003 for select PAHs which were qualified using a "J/UJ".

<u>Metals by EPA Method 6010B</u>

- Trace values of copper and lead were found in the laboratory blank. Copper in affected samples MRS03-APN32404280- SS001, -SS002, -SS003, -SS1001, -SS1002, -SS1003, -SS2001, -SS2002, and -SS2003 were qualified using a "J" for detected results. Lead in affected sample MRS03-APN32404280-SS1002, -SS1003, SS2001, -SS2002, and -SS2003 were qualified using a "J" for detected result.

- MS recoveries were outside project limits for antimony, zinc, and lead in affected samples MRS03-APN32404280-SS001, -SS002, and -SS003. Zinc and antimony were qualified using a using a "J/UJ".

Synectics #280-120972-1

Lab Work Order# J120972-1: (APN 32404487)

<u>PAHs by EPA Method 8270C SIM</u>

- MS/MSD, and/or Triplicate RSD values were outside the control limits in sample MRS03-APN32404487-SS001 for fluoranthene, naphthalene, phenanthrene, and pyrene, in sample MRS03-APN32404487-SS002 for 2—methylnaphthalene, anthracene, fluoranthene, naphthalene, phenanthrene, and pyrene, and in sample MRS03-APN32404487-SS003 for 2—methylnaphthalene, anthracene, fluoranthene, naphthalene, phenanthrene, and pyrene. Analytes were qualified using a "J" for detected results.

- Surrogate recoveries outside project limits in sample MRS03-APN32404487-SS001, for benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(g,h,i)perylene, benzo(k)fluoranthene, chrysene, dibenz(a,h)anthracene fluoranthene, indeno(1,2,3-c,d)pyrene, naphthalene, phenanthene, and pyrene were qualified using "J" for detected results. 2—

methylnaphthalene, acenaphthene, anthracene, and fluorene in affected sample MRS03-APN32404487- SS001 were qualified using a “UJ”.

Metals by EPA Method 6010B

- Trace values of copper were found in the grinding blank. Copper in affected samples MRS03-APN32404487-SS001, -SS002, and -SS003, were qualified using a “J” for detected results.
- MS/MSD, and/or Triplicate RSD values were outside the control limits. Antimony in affected samples MRS03-APN32404487-SS001, -SS002, and -SS003 were qualified using a “UJ”. Copper and lead in affected samples MRS03-APN32404487-SS001, -SS002, and -SS003 were qualified using a “J” for detected results. Zinc in affected samples MRS03-APN32404487-SS001 and -SS002 were qualified using a “J” for detected results.

Synectics #280-120076-1

Lab Work Order# J120076-1: (APN 32404526)

PAHs by EPA Method 8270C SIM

- MS/MSD RPD and triplicate RSD were outside project limits for in samples MRS03-APN32404526- SS001, -SS002, and SS003 were qualified using either “J/UJ”.
- Surrogate recoveries were outside project limits in sample MRS03-APN32404526- SS1002 for all PAHs analyzed which were qualified using “J/UJ”.

Metals by EPA Method 6010B

- Trace values of copper and lead were found in the laboratory blank. Copper in affected samples MRS03-APN32404526-SS001, -SS002, -SS003, -SS1001, -SS1002, -SS1003, -SS2001, -SS2002, and -SS2003 were adjusted to LOQ values as not detected using a “U”. Lead in affected samples MRS03-APN32404526-SS2001, -SS003, -SS1001, -SS1002, -SS1003, -SS2001, -SS2002, and -SS2003 were adjusted to LOQ values as not detected using a “U”.
- MS recovery were outside project limits for antimony in affected samples MRS03-APN32404526-SS001, -SS002, and -SS003 and were qualified using a “UJ”.

Synectics #280-120514-1

Lab Work Order# J120514-1: (APN 32404527)

PAHs by EPA Method 8270C SIM

- Surrogate recoveries outside project limits in sample MRS03-APN32404527- SS003, for all PAHs analyzed were qualified using “J/UJ”.

Metals by EPA Method 6010B

- Trace values of copper were found in the laboratory grinding blanks. Copper in affected samples MRS03-APN32404527-SS002, -SS003, -SS1001, -SS1002, -SS1003, -SS2001, -SS2002, and -SS2003 were qualified using a “J” for detected results. Copper in affected sample MRS03-APN32404527-SS001 was qualified using a “UJ”.

Synectics #280-120510-1

Lab Work Order# J120510-1: (APN 32404550)

<u>PAHs by EPA Method 8270C SIM</u>

- MS/MSD recoveries were outside the control limits for lead and zinc. Lead and zinc in affected samples MRS03-APN32404550-SS1001, -SS1002, and-SS1003 were qualified using a “J” for detected results.
- MS/MSD recoveries and triplicate RSDs were outside control limits in samples MRS03-APN32404550- SS1001, -SS1002, and -SS1003 for benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, benzo(g,h,i)perylene, chrysene, dibenz(a,h)anthracene fluoranthene, indeno(1,2,3-c,d)pyrene, phenanthene, and pyrene) were qualified using “J” for detected results.

<u>Metals by EPA Method 6010B</u>

- Trace values of copper were found in the laboratory blank. Copper in affected samples MRS03-APN32404550-SS001, -SS002, -SS003, -SS1001, -SS1002, -SS1003, -SS2001, -SS2002, and -SS2003 were qualified using a “J” for detected results.
- Antimony in affected samples MRS03-APN32404550-SS001, -SS002, and -SS003 were qualified “R” (rejected) due to low MS/MSD recoveries.

Synectics #280-119852-1

Lab Work Order# J119852-1: (APN 32404553)

<u>PAHs by EPA Method 8270C SIM</u>

- MS/MSD RPDs and triplicate RSDs were outside control limits for chrysene, fluoranthene, and pyrene and were qualified using “J” in samples MRS03-APN32404553-SS1001 and -SS1003; and for benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, benzo(g,h,i)perylene, indeno(1,2,3-c,d)pyrene, and phenanthrene were qualified using “J” in sample MRS03-APN32404553- SS1003.
- Surrogate recoveries outside project limits in samples MRS03-APN32404553- SS001, -SS002, -SS2003, -SS1002, and -SS2001 for all PAHs which were qualified using “J/UJ”.

<u>Metals by EPA Method 6010B</u>

- Trace values of copper and lead were found in the laboratory blank. Copper in affected samples MRS03-APN32404553-SS001, -SS002, -SS003, SS1001, -SS1002, -SS1003, -SS2001, -SS2002, and -SS2003 and lead in samples MRS03-APN32404553-SS2001, -SS2002, and -SS2003 were qualified using a “J” for detected results.

Synectics #280-119538-1 and #280-119538-2

Lab Work Order# J119538-1 and J119538-2: (APN 32404558)

<u>PAHs by EPA Method 8270C SIM</u>

- Surrogate recoveries were outside project limits in samples MRS03-APN32404558- SS001 for naphthalene, and in samples MRS03-APN32404558- SS002and -SS2003 for all PAHs analyzed were qualified using “J/UJ”.
- Due to the exceedance of maximum extraction holding time, not -detected results for all PAHs were qualified using a “R (rejected)” for samples MRS03-APN32404558- SS1001, -SS1002, -SS1003, -SS2001, -SS2002, and -SS2003.

<u>Metals by EPA Method 6010B</u>

- Trace values of copper were found in the laboratory blank. Copper in affected samples MRS03-APN32404558-SS001, -SS002, and -SS003, were qualified using a “J” for detected results. Copper in affected samples MRS03-APN32404558-SS1001, -SS1002, -SS2001, SS2002, and -SS2003, were qualified using a “U”.
- MS recoveries outside project limits for lead, and zinc were qualified using a “J” in parent sample MRS03-APN32404558-SS1001.

Synectics #280-122779-1

Lab Work Order# J122779-1: (APN 32404624)

<u>PAHs by EPA Method 8270C SIM</u>

- Surrogate recoveries outside control limits in affected sample MRS03-APN32404624-SS001R for phenanthrene, and pyrene were qualified using a “J” for detected results. Surrogate recoveries outside control limits in affected samples in APN32404624-SS002R, -SS003R, -SS2001R, and -SS2002R for all PAHs were qualified using a “J/UJ”.

<u>Metals by EPA Method 6010B</u>

- Antimony, copper, lead, and zinc had interference check samples (ICS) outside control limits due to detected analytes in method grinding blank in affected samples MRS03-APN32404624-SS001R, -SS002R, -SS003R, -SS1001R, -SS1002R, -SS1003R, -SS2001R, -SS2002R, and -SS2003R. Results were qualified using a “J” for copper, lead, and mercury, and a “UJ” for antimony.

Synectics #280-122779-2

Lab Work Order# J122779-2: (APN 32404625)

<u>PAHs by EPA Method 8270C SIM</u>

- Surrogate recoveries outside control limits in affected samples in APN32404625-SS001R, -SS003R, -SS003R, -SS1001R,-SS1002R, -SS1003R, -SS2001R, and -SS2002R for all PAHs were qualified using a “J/UJ”.

<u>Metals by EPA Method 6010B</u>

- Antimony, copper, lead, and zinc in ICS sample were outside of control limits. Therefore, affected samples were qualified using a “J/UJ”.

Synectics #280-122777-2

Lab Work Order# J122777-2: (APN 32404638)

PAHs by EPA Method 8270C SIM

- MS percent recoveries, MS/MSD RPDs and/or triplicate RSDs were outside control limits for antimony, lead, and copper. Antimony in affected samples MRS03-APN32404638-SS001, -SS002, -SS003, -SS1001, -SS1002, -SS1003, -SS2001, -SS2002, and -SS2003 were qualified using a “UJ” for detected results. Copper in affected samples MRS03-APN32404638-SS001, 002, and 003 were qualified using a “J” for detected results. Lead in affected samples MRS03-APN32404638-SS001, -SS002, and -SS003 were qualified using a “J”.
- MS percent recoveries, MS/MSD RPDs and/or triplicate RSDs were outside control limits for samples MRS03-APN32404553- SS001, -SS002, and -SS2003. 2—methylnaphthalene, acenaphthene, anthracene, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, benzo(g,h,i)perylene, chrysene, dibenz(a,h)anthracene fluoranthene, fluorene, indeno(1,2,3-c,d)pyrene, phenanthrene, and pyrene were qualified using a “J” for detected results.

Metals by EPA Method 6010B

- Trace values of copper were detected in the grinding blank. Copper in affected samples MRS03-APN32404638-SS001, -SS1001, -SS1002, -SS1003, -SS2001, -SS2002, and -SS2003 were qualified using a “J” for detected results.

Synectics #280-122079-1

Lab Work Order# J122079-1: (APN 32404640)

PAHs by EPA Method 8270C SIM

- Surrogate recoveries outside control limits for PAHs in affected sample MRS03- APN32404640-SS1002 were qualified using a “J” in benzo(a)pyrene, benzo(b)fluoranthene, chrysene, fluoranthene, and pyrene for detected results.
- MS/MSD, and/or triplicate recoveries were outside control limits in affected samples MRS03-APN32404640-SS2001, -SS2002, -SS2003, -SS3001, and -SS3002. Benzo(a)anthracene, benzo(b)fluoranthene, benzo(a)pyrene, benzo(k) fluoranthene, chrysene, fluoranthene, and phenanthrene were qualified using a “J” for detected results in samples MRS03- APN32404640-SS2001, -SS2002, -SS2003. Benzo(a)pyrene was qualified using a “J” in samples MRS03-APN32404640-SS3001, and -SS3002.

Metals by EPA Method 6010B

- Copper was found in the laboratory blank. Copper in affected samples MRS03-APN32404640-SS1001, -SS1002, -SS1003, -SS1003, -SS2001, -SS2002, -SS2003, -SS3001, -SS3002, and -SS3003 were qualified using a “U”.
- MS recoveries outside control limits for lead and zinc in affected samples MRS03-APN32404640-SS3001 and -SS3002 were qualified using a “UJ/J”.

Synectics #280-119625-1

Lab Work Order# J119625-1: (APN 32404656)

PAHs by EPA Method 8270C SIM

- MS and/or MSD recoveries were outside control limits in sample MRS03-APN32404656-SS001 and -SS002 for benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(g,h,i)perylene, benzo(k)fluoranthene, chrysene, dibenz(a,h)anthracene, fluoranthene, indeno(1,2,3-c,d)pyrene, and pyrene. Analytes were qualified using a "J" for detected results.
- Surrogate recoveries were outside the control limits in MRS03-APN32404656-SS003 for 2—methylnaphthalene, acenaphthene, anthracene, fluoranthene, fluorene, naphthalene. Analytes were qualified using a "J/UJ".

Metals by EPA Method 6010B

- Trace values of copper were found in the grinding blank. Copper in affected samples MRS03-APN32404656-SS001, -SS002, and -SS003, were qualified using a "J" for detected results.

Synectics #280-119800-1

Lab Work Order# J119800-1: (APN 32404658)

PAHs by EPA Method 8270C SIM

- Benzo(a)pyrene is outside project limits for LCS recoveries and therefore qualified using a "J" in samples MRS03-APN32404658-SS001, -SS002, -SS003, -SS1001, -SS1002, -SS1003, -SS2001, -SS2002, and -SS2003.
- Laboratory Triplicate RSD outside project limits were qualified using a "J" for MRS03-APN32404658-SS1002 [anthracene], MRS03-APN32404658-SS2002 [anthracene, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, fluoranthene, naphthalene, and phenanthrene,], and MRS03-APN32404658-SS2003 [anthracene, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, fluoranthene, naphthalene, and phenanthrene,]. Naphthalene was qualified as "UJ" in samples MRS03-APN32404658-SS2002 and MRS03-APN32404658-SS2003.
- Laboratory Replicate RPDs and/or laboratory triplicate RSDs were outside project limits for PAHs: 2-Methylnapthalene, acenaphthalene, benzo(g,h,i)perylene, dibenz(a,h)anthracene, fluorene, indeno(1,2,3-c,d)pyrene , and pyrene in samples MRS03-APN32404658-SS2002 and MRS03-APN32404658-SS2003. Surrogate recovery outside project limits for acenaphthalene, dibenz(a,h)anthracene, and fluorene in sample MRS03-APN32404658-SS1003, -SS1001, -SS1002 -SS1003, -SS2001, -SS2002, and -SS2003.

Metals by EPA Method 6010B

- Trace values of copper were found in the laboratory blank. Copper in affected samples MRS03-APN32404658-SS001, -SS002, SS2001, -SS2002, and -SS2003 were qualified using a "J" for detected results, and in affected samples MRS03-APN32404658-SS1001, -SS1002, and -SS1003 were qualified using a "UJ".

- MS recoveries outside project limits for antimony, lead, and zinc were qualified using a “J” for lead and zinc and a “UJ” for antimony in samples MRS03-APN32404658-SS001, -SS002, and SS003.

Synectics #280-119855-1

Lab Work Order# J119855-1: (APN 32404659)

<u>PAHs by EPA Method 8270C SIM</u>

- Surrogate recoveries were outside project limits in samples MRS03-APN32404659- SS001, -SS003, and -SS1002 for all PAHs analyzed were qualified using “J/UJ”.

<u>Metals by EPA Method 6010B</u>

- Trace values of copper were found in the laboratory blank. Copper in affected samples MRS03-APN32404659-SS001, -SS002, -SS003, SS1001, -SS1002, -SS1003, -SS2001, -SS2002, and -SS2003 were qualified using a “J” for detected results.

Synectics #280-119800-2

Lab Work Order# J119800-2: (APN 32404665)

<u>PAHs by EPA Method 8270C SIM</u>

- LCS recoveries outside project limits for benzo(a)pyrene were qualified using “J/UJ” in samples MRS03-APN32404665- SS001, -SS002, -SS003, SS1001, -SS1002, -SS1003, -SS2001, -SS2002, and -SS2003.
- Benzo(a)pyrene is outside project limits for LCS recoveries and therefore qualified using a “J” in samples MRS03-APN32404665-SS001, -SS002, -SS003, -SS1001, -SS1002, -SS1003, -SS2001, -SS2002, and -SS2003.
- Surrogate recoveries were outside project limits in samples MRS03-APN32404665- SS1001, -SS1002, and -SS2002 for all PAHs analyzed were qualified using “J/UJ”.

<u>Metals by EPA Method 6010B</u>

- Trace values of copper were found in the laboratory blank. Copper in affected samples MRS03-APN32404665-SS001, -SS002, -SS003, SS1001, -SS1002, -SS1003, -SS2001, -SS2002, and -SS2003 were adjusted to nondetect at LOQ.

Synectics #280-120777-1

Lab Work Order# J120777-1: (APN 32404666)

<u>Metals by EPA Method 6010B</u>

- Trace concentrations of copper were detected in the laboratory blank. Copper in affected samples MRS03-APN32404666- SS001, -SS1001, -SS1002, -SS1003, -SS2001, -SS2002, and -SS2003 were qualified using a “J” at the reported results.

Synectics #280-120777-2

Lab Work Order# J120777-2: (APN 32404638)

<u>PAHs by EPA Method 8270C SIM</u>

- Laboratory duplicate RPD and/or triplicate RSD control limits were exceeded for select PAHs. Affected samples MRS03-APN32404638-SS001 through –SS003 were qualified using a “J”.
- MS recoveries and/or MSD RPD exceeded project limits for select PAHs. Affected samples MRS03-APN32404638-SS001 through –SS003 were qualified using a “J”.

<u>Metals by EPA Method 6010B</u>

- Trace concentrations of copper were detected in the laboratory blank. Copper in affected samples MRS03-APN32404638-SS1001, -SS1002, and -SS1003 were qualified using a “J” at the reported results.
- Interference check sample results for antimony were outside of the acceptance criteria. Affected samples MRS03-APN32404638-SS001 through –SS003, -SS1001 through SS1003, and -SS2001 through - SS2003 for antimony were qualified using a “UJ”.
- Laboratory duplicate RPD and/or triplicate RSD control limits were exceeded for copper. Affected samples MRS03-APN32404638-SS001 through –SS003 were qualified using a “J”.
- MS recoveries and/or MSD RPD exceeded project limits for antimony, lead and zinc. Affected samples MRS03-APN32404638-SS001 through –SS003 were qualified using a “J/UJ”.

Synectics #280-124121-1

Lab Work Order# J124121-1: (APN 32404668)

<u>PAHs by EPA Method 8270C SIM</u>

- Benzo(a)pyrene, benzo(g,h,i)perylene, benzo(k)fluoranthene, dibenz(a,h)anthracene, and indeno (1,2,3-c,d)pyrene exceeded CCV percent difference limit in samples MRS03-APN32404668-SS001, -SS002, and -SS003. Results were qualified with a “J” for benzo(a)pyrene, benzo(g,h,i)perylene, and benzo(k)fluoranthene, and with a “R” (rejected) for dibenz(a,h)anthracene and indeno (1,2,3-c,d)pyrene for detected results.

Synectics #280-121127-1

Lab Work Order# J121127-1: (APN 32404688)

<u>PAHs by EPA Method 8270C SIM</u>

- Surrogate recoveries outside project limits in sample MRS03-APN32404688- SS001 and -SS1003. Select PAHs in affected sample MRS03-APN32404688- SS001 were qualified using “J/UJ.
- MS %R and/or MSD RPD values were outside control limits for select PAHs in affected sample MRS03-APN32404688-SS1001 through –SS1003 were qualified using “J” for detected results.

- Benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, chrysene, fluoranthene, and pyrene were detected in method blank, therefore, affected samples MRS03-APN32404688-SS1001, -SS1002, and SS2001 were qualified using “U/UJ” at reported concentrations.
- Extraction holding time was slightly exceeded for EB-030819. Results for this sample was qualified using a “IJ”.

<u>Metals by EPA Method 6010B</u>

- Antimony, copper, and lead were detected in the laboratory grinding blank. Affected samples MRS03-APN32404688-SS001, -SS002, -SS003, -SS1001 through -SS1003, SS2001 through -SS2003 were qualified using a “J or U” at the reported concentrations.
- MS recoveries outside control limits for antimony and zinc in affected samples MRS03-APN32404688-SS1001, -SS1002, and -SS1003 were qualified using a “J/UJ”.
- Interference check sample results for antimony was outside the acceptance criteria. Affected samples MRS03-APN32404688-SS001, -SS002, -SS003, -SS1001 through -SS1003, SS2001 through -SS2003 were qualified using a “UJ”.

Synectics #280-121853-1

Lab Work Order# J121-853-1: (APN 32404730)

<u>PAHs by EPA Method 8270C SIM</u>

- Antimony recoveries were low in MS/MSD. Antimony in affected samples MRS03-APN32404730-SS001, -SS002, and -SS003, were qualified using a “UJ”.

<u>Metals by EPA Method 6010B</u>

- MS recoveries and laboratory triplicate RSD were outside control limits for lead and zinc in affected samples MRS03-APN32405212-SS001, -SS002, and -SS003 were qualified using a “J” for detected results.

Synectics #280-120975-1

Lab Work Order# J120-975-1: (APN 32405168)

<u>PAHs by EPA Method 8270C SIM</u>

- Surrogate recoveries outside project limits in sample MRS03-APN32405168- SS003, for 2—methylnaphthalene, anthracene, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, benzo(g,h,i)perylene, chrysene, dibenz(a,h)anthracene fluoranthene, fluorene, indeno(1,2,3-c,d)pyrene, naphthalene, phenanthrene, and pyrene were qualified using “J” for detected results. Acenaphthene in affected sample MRS03-APN32405168- SS003 was qualified using “UJ”.

<u>Metals by EPA Method 6010B</u>

- Trace values of copper were found in the laboratory blank. Copper in affected samples MRS03-APN32405168-SS001, -SS002, and -SS003, were qualified using a “J” for detected results.

Synectics #280-122592-1

Lab Work Order# J122-592-1: (APN 32405169)

PAHs by EPA Method 8270C SIM

- Benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(g,h,i)perylene, benzo(k)fluoranthene, benzo(k)fluoranthene, chrysene, dibenz(a,h)anthracene, and indeno(1,23-c,d)pyrene, found in equipment blank affected samples MRS03-APN32405172-SS001, -SS002, -SS003, -SS1001, and -SS1001 and -SS1003 were qualified using a "U".
- MS/MSD outside control limits in affected samples MRS03-APN32405172-SS001, -SS002, and -SS003 for fluorene and/or naphthalene were qualified using a "J" for detected results.

Metals by EPA Method 6010B

- Copper and zinc were found in the grinding blank. Copper and zinc in affected samples MRS03-APN32405172-SS001, -SS002, -SS003, -SS1001, -SS1002, -SS1003, -SS2001, -SS2002, and -SS2003 were qualified using a "J" for detected results.
- Post spike recoveries were outside control limits for antimony. Antimony in affected samples MRS03-APN32405172-SS001, -SS002, -SS003, -SS1001, -SS1002, -SS1003, -SS2001, -SS2002, and -SS2003 were qualified using a "UJ".

Synectics #280-122592-1

Lab Work Order# J122-592-1: (APN 32405172)

PAHs by EPA Method 8270C SIM

- Surrogate recovery outside project limits for select PAHs for which not detected results were qualified using a "UJ".
- MS and/or MSD recoveries for select PAHs outside project limits were qualified using a "J" in affected samples.
- MRS-APN32405172-SS001, MRS-APN32405172-SS2001, MRS-APN32405172-SS2002, and MRS-APN32405172-SS2003 were qualified using a "J" due to analyte detection in equipment blank.

Metals by EPA Method 6010B

- Trace values of copper, lead, and zinc were found in the grinding blank or method blank. Copper and lead in affected samples MRS03-APN32405172-SS001, -SS002, -SS003, -SS1001, -SS1002, and -SS1003, SS2001, -SS2002, and -SS2003 were qualified using a "J" for detected results, and zinc in affected samples MRS03-APN32405172-SS1001, -SS1002, and -SS1003 were qualified using a "J" for detected results.
- Samples were qualified with "R" (rejected) for antimony due to extremely low matrix spike recoveries.

Synectics #280-119545-1

Lab Work Order# J119-545-1: (APN 32405174)

<u>PAHs by EPA Method 8270C SIM</u>

- LCS outside the control limits for 2-methylnaphthalene and naphthalene in affected sample MRS03-APN32405174-SS2002, were qualified using a “J” for detected results.

<u>Metals by EPA Method 6010B</u>

- MS/MSD recoveries outside control limits for antimony, copper, lead, and zinc in parent samples, were qualified using a “UJ” for antimony and “J” for copper, lead, and zinc.

Synectics #280-119384-1

Lab Work Order# J119-384-1: (APN 32405176)

<u>PAHs by EPA Method 8270C SIM</u>

- Surrogate recovery outside project limits for select PAHs in samples MRS03-APN32405176-SS002 and MRS03-APN32405176-SS003 were qualified using a “J”.

<u>Metals by EPA Method 6010B</u>

- Copper and zinc were found in the grinding blank. Antimony and lead were detected in the method blank, and antimony, copper, and lead were outside control limits for MS/MSD. Antimony in one sample, MRS03-APN32405176-SS001, was qualified using a “J” for detected results. Copper and lead in affected samples MRS03-APN32405176-SS001, -SS002, -SS003, -SS1001, -SS1002, and -SS1003 were qualified using a “J/UJ”.

Synectics #280-119360-1

Lab Work Order# J119-360-1: (APN 32405177)

<u>PAHs by EPA Method 8270C SIM</u>

- MS/MSD recoveries for select PAHs were outside QC limits. Spiked samples MRS03-APN32405177-SS1001, -SS1002, and -SS1003 were qualified using a “J” for detected results.

<u>Metals by EPA Method 6010B</u>

- Copper and lead were detected in the laboratory blank or the grinding blank. Copper in affected samples MRS03-APN32405177-SS001, -SS002, -SS003, -SS1001, SS1002, SS1003, SS2001, SS2002, and SS2003, and lead in samples MRS03-APN32405177-SS2001, and -SS2002 were qualified using a “J” .
- Antimony, lead, and zinc recoveries were outside the MS or MSD limits. Spiked samples MRS03-APN32405177-SS1001 and -SS1002 were qualified using a “J/UJ”.

Synectics #280-119360-1

Lab Work Order# J119-360-1: (APN 32405178)

<u>Metals by EPA Method 6010B</u>

- Zinc, copper, and lead were found in the laboratory blank or the grinding blank. Only copper in affected samples MRS03-APN32405178-SS001, -SS002, -SS003, -SS1001, SS1002, SS1003, SS2001, SS2002, and SS2003, and lead in samples MRS03-APN32405178-SS2001, -SS2002, and -SS2003 were qualified using a "J".

Synectics #280-121679-1

Lab Work Order# J121-679-1: (APN 32405212)

Metals by EPA Method 6010B

- MS recoveries outside control limits for antimony, lead, and zinc in affected samples MRS03-APN32405212-SS001, -SS002, and -SS003 were qualified as "R – rejected" for antimony and "J" for detected results for lead and zinc.

Synectics #280-124981-1

Lab Work Order# J124981-1: (APN 32405265)

PAHs by EPA Method 8270C SIM

- Maximum extraction holding time was exceeded for several PAHs in samples MRS03-APN32405265-SS001, -SS002, –SS003, –SS1001, –SS1002, –SS1003, –SS2001, –SS2002, and –SS2003 were qualified using a "J" for detects and R (rejected) for non-detects.

Metals by EPA Method 6010B

- Copper, lead, and zinc detected in method blank in samples MRS03-APN32405265-SS001, -SS002, and -SS003 were qualified using a "J" for detected results.
- Antimony in samples MRS03-APN32405265-SS001, -SS002, and -SS003 were qualified using a "R" (rejected) due to extremely low MS/MSD recoveries.

Lab Work Order# J124981-1: (APN 32405267)

PAHs by EPA Method 8270C SIM

- Maximum extraction holding time was exceeded for PAHs in samples MRS03-APN32405267-SS001, - -SS002, and -SS003 were qualified using a "J" for 2-methylnaphthalene, anthracene, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(g,h,i)perylene, benzo(k)fluoranthene, chrysene, dibenz(a,h)anthracene, fluoranthene, indeno(1,2,3-c,d)pyrene, naphthalene, phenanthrene, and pyrene, and "R" (rejected) for acenaphthene and fluorene in non-detects.

Metals by EPA Method 6010B

Copper, lead, and zinc detected in method blank in affected samples MRS03-APN32405267-SS001, -SS002, and -SS003 were qualified using a "J" for detected results.

Synectics #280-121580-1

Lab Work Order# J121-580-1: (APN 32405289)

PAHs by EPA Method 8270C SIM

- Surrogate recoveries were outside of the project limits in sample MRS03-APN32405289- SS1001. Analyte results were qualified using "J/UJ".

Metals by EPA Method 6010B

- Antimony and zinc were detected in the laboratory grinding blank. Antimony and zinc in affected samples MRS03-APN32405289-SS001, -SS002, -SS003, -SS1001, -SS1002, -SS1003, SS2001, -SS2002, and -SS2003 were adjusted to non-detect (UJ) at the reported results.
- Zinc was recovered outside of MS % recovery control limits. Affected samples MRS03-APN32405289-SS001, -SS002, and -SS003 were qualified using a "J" for detected results.

Synectics #280-121580-1

Lab Work Order# J121-580-1: (APN 32405290)

Metals by EPA Method 6010B

- Antimony was recovered low in MS/MSD. Antimony in affected samples MRS03-APN32405290-SS001, -SS002, and -SS003, were qualified using a "UJ".

Synectics #280-124017-1

Lab Work Order# J124017-1: (APN 32436011)

PAHs by EPA Method 8270C SIM

- Maximum holding time was exceeded by one day for PAHs. Affected samples MRS03-APN32436011-SS001 through APN32436011-SS003, APN32436011-SS1001 through APN32436011-SS1003, and APN32436011-SS2001 through-SS2003 were qualified using a "J" for detected results.

Metals by EPA Method 6010B

- Copper, lead, and zinc detected in method grinding blank in affected samples MRS03-APN32436011-SS001 through APN32436011-SS003, APN32436011-SS1001 through APN32436011-SS1003, and APN32436011-SS2001 through-SS2003 were qualified using a "J" for detected results.
- Antimony and copper were outside of project limits in ICS. Affected samples MRS03-APN32436011-SS001 through APN32436011-SS003 were qualified as J/UJ,
- MS and MSD outside control limits for antimony and lead in affected samples MRS03-APN32436011-SS001 through APN32436011-SS003, APN32436011-SS1001 through APN32436011-SS1003, and APN32436011-SS2001 through-SS2003 were qualified using a "J/UJ".

Synectics #280-124364-1

Lab Work Order# J124364-1: (APN 310 21080 & APN 32436012)

PAHs by EPA Method 8270C SIM

- Select PAHs exceeded the RPD/RSD limits in LCSD, duplicate of sample MRS03-APN31021080-SS1002A, and laboratory triplicate samples. Detected results in affected samples were qualified using a J qualifier.
- MS recoveries outside control limits for benzo(a)pyrene, benzo(g,h,i)perylene, benzo(k)fluoranthene, and indeno(1,2,3-c,d)pyrene in affected samples MRS03-APN31021080A-SS1001A, -SS1002A, and -SS1003A were qualified using a "J" for detected results.
- Extraction holding times and temperature receipts were outside project limits. Detected results in affected samples MRS03-APN31021080-SS001A through -SS003A, MRS03-APN32436012-SS001, -SS002, -SS003, -SS1001, -SS1002, -SS1003, -SS2001, -SS2002, and -SS2003 were qualified using a J qualifier. Non-detect results for acenaphthene, anthracene, dibenz(a,h)anthracene, and fluorine in affected sample MRS03-APN32436012-SS2002 fluorene in samples MRS03-APN32436012-SS1002, -SS2001 were qualified using a "R" (rejected).
- Extraction holding time was exceeded for EB-052119. PAHs results were qualified using a "UJ".

Metals by EPA Method 6010B

- Copper exceeded laboratory duplicate RPD triplicate RSD limits. Copper results in affected samples MRS03-APN31021080-SS1001A though –SS1003A were qualified using a J.
- Antimony, copper, lead, and zinc were recovered outside of MS % recovery control limits. Detections in sample MRS03-APN31021080-SS1001A though –SS1003A were qualified using a J/UJ.

Synectics # 280-122568-1

Lab Work Order# J122568-1: (APN 32436019)

PAHs by EPA Method 8270C SIM

- One or more surrogates were outside of control limits for various samples. Affected samples MRS03-APN32436019-SS2001, MRS03-APN32436019-SS2002, -SS3002, and -SS4001 and EB-041119 for all PAHs analyzed were qualified using "J/UJ".
- MS/MSD recoveries, sample duplicate and triplicate RSDs were outside of project limits for select PAHs in sample MRS03-APN32436019-SS003. Detected PAHs were qualified using a "J".
- Extraction holding time was slightly exceeded. Analytical data for results in affected samples MRS03-APN32436019-SS001, -SS002, -SS003 were qualified using J/UJ.

Metals by EPA Method 6010B

- Analytes antimony, copper, lead, and zinc were recovered outside of MS recovery control limits. Sample data for MRS03-APN32436019-SS003 were qualified using a "J/UJ".
- Laboratory triplicate RSD was outside project limits for lead in sample MRS03-APN32436019-SS00, which was qualified using a "J".

Synectics # 280-122566-1

Lab Work Order# J122566-1: (APN 32437016)

PAHs by EPA Method 8270C SIM

- Extraction holding time was slightly exceeded. Analytical data for results in affected samples MRS03-APN32437016-SS001, -SS002, -SS003 were qualified using J/UJ. PAHs in EB-040919 were qualified using R (rejected) qualifier due to gross holding time excursion (2xholding times).

Metals by EPA Method 6010B

- Interference check sample results for antimony and lead were outside of the acceptance criteria. Affected samples MRS03-APN32437016-SS001-SS003, -SS1001 - SS1003, and -SS2001 - SS2003 for antimony were qualified using a "J/UJ".

Synectics # 280-124809-1

Lab Work Order# J124809-1: (APN 32437017 & APN 32439020)

PAHs by EPA Method 8270C SIM

- Extraction holding time was exceeded in samples MRS03-APN32437017-SS001, -SS002, and -SS003 and MRS03-APN32439020-SS001 through –SS003, MRS03-APN32439020-SS1001 through –SS1003, MRS03-APN32439020-SS2001 through –SS2003. Detections were qualified with a "J" and non-detects with R (rejected).
- Fluoranthene and pyrene exceeded the laboratory replicate RPD in samples APN32437017-SS1001, -SS1002, and -SS1003; data were qualified using "J" for detected results.
- Acenaphthene and phenanthrene exceeded the laboratory triplicate RSD in samples APN32437017-SS1001, -SS1002, and -SS1003; data were qualified using a "J" for detected results.

Metals by EPA Method 6010B

- Antimony, lead, and zinc were recovered low in MS/MSD. Analytes in affected samples MRS03-APN32439020-SS001 through –SS003 and APN32437017-SS1001 through -SS1003 were qualified using a "J/UJ" for detected results.

Synectics # 280-124655-1

Lab Work Order# J124655-1: (APN 32404631B; MRS03-APN32405218A; MRS03-APN32439031)

<u>Metals by EPA Method 6010B</u>

- Lead and zinc were outside of project limits in Interference Check Sample (ICS). Analytes in affected samples MRS03-APN32404631-SS001 through –SS003 and APN32405218A-SS001 through -SS003, and MRS03-APN32439031-SS001 through –SS003, -SS1001 through –SS1003, and –SS2001 through –SS2003 were qualified using a "J" for detected results. Similarly, copper was qualified in samples MRS03-APN32439031-SS001, -SS1001 through –SS1003, and –SS2001 through –SS2003 were qualified using a "J" for detected results.
- Antimony, copper, lead, and zinc were recovered low in MS/MSD samples. Analytes in affected samples MRS03-APN32405218A-SS001 through –SS003 and MRS03-APN32405218A-SS1001 through -SS1003 were qualified using a "J/UJ" for detects/nondetects.

Synectics # 280-124367-1

Lab Work Order# J124367-1: (APN 31021080)

<u>PAHs by EPA Method 8270C SIM</u>

- Extraction holding time was exceeded in samples MRS03-APN31021080-SS001B through APN31021080-SS003B, APN31021080B-SS1001B through APN31021080B-SS1003B, and APN31021080B-SS2001B through-SS2003B. All PAHs were qualified using a "J" (estimated) for detected or "R"(rejected) for not-detected results.

<u>Metals by EPA Method 6010B</u>

- Antimony, copper, lead and zinc were outside of project limits in Interference Check Sample (ICS). These analytes in affected samples MRS03-APN31021080-SS001B through -SS003B, -SS1001B through -SS1003B, and -SS2001B through -SS2003B were qualified using a "J/UJ".
- Antimony, lead, and zinc were recovered outside of MS/MSD limits and exceeded RPD limits. Analytes in affected samples MRS03-APN31021080-SS001B through –SS003 were qualified using a "J/UJ".

Synectics # 280-121129-1

Lab Work Order# J121191-1: (APN 32404208A)

<u>PAHs by EPA Method 8270C SIM</u>

- The MS/MSD recoveries, sample duplicate and triplicate RSDs were outside project control limits in samples MRS03-APN32404208A-SS001, -SS002, and -SS00304208A- SS001, -SS002, and -SS003 for select PAHs for which data were qualified using "J/UJ".
- Surrogate recovery for 2-methylnaphthalene-d10 was slightly below the QC limit in samples MRS03-APN32404208A-SS002, MRS03-APN32404208A-SS1002, and MRS03-APN32404208A-SS2003. Results were qualified

- Extraction holding time was slightly exceeded project for EB-030719. Data was qualified using "UJ".

Metals by EPA Method 6010B

- Trace values of copper were found in the laboratory blank. Copper in affected samples MRS03-APN32404208A-SS1001, -SS1002, -SS1003, SS2001, -SS2002, and -SS2003 were qualified using a "J" for detected results.
- MS/MSD recoveries and/or MSD RPD were outside project control limits in samples MRS03-APN32404208A- SS001, -SS002, and -SS003 for antimony, lead, and zinc. Affected samples were qualified using a "J/UJ".

Synectics # 280-120076-1

Lab Work Order# J120076-1: (APN 32404552A)

PAHs by EPA Method 8270C SIM

- Surrogate recovery for 2-methylnaphthalene-d10 was slightly below the QC limits in sample MRS03-APN32404552A-SS1002 for all PAHs analyzed were qualified using either "J/UJ".
- MS/MSD RPD, laboratory replicate RPD, and triplicate RSD values outside control limits in affected samples MRS03-APN32404552A-SS001, -SS002, and-SS003 for select PAHs were qualified using a "J" for detected results.

Metals by EPA Method 6010B

- Trace concentrations of copper, lead, and zinc were found in the grinding blank. Affected samples MRS03-APN32404552A-SS001, -SS002, -SS003, SS1001, -SS1002, -SS1003, -SS2001, -SS2002, and -SS2003 were qualified using a "J" for detected results or "UJ" for not-detected results.
- Antimony was recovered low in MS/MSD samples. Antimony in samples MRS03-APN32404552A-SS001, -SS002, and-SS003 were qualified using "UJ".

Synectics # 280-119624-1

Lab Work Order# J119624-1: (APN 32404556A)

PAHs by EPA Method 8270C SIM

- Naphthalene was detected in the method blank at a trace concentration. EB-012419 was adjusted to not detected concentration at the LOQ.
- Extraction holding time was slightly exceeded in EB-012419. Detected and non-detected PAHs were qualified using J/UJ.
- Two surrogate compounds were recovered outside QC limits in sample MRS03-APN32404556A-SS002. Results were qualified using "J/UJ".

Metals by EPA Method 6010B

- MS RPD value and LCSD recovery exceeded QC limit for copper. Data for APN32404556A-SS001, -SS002, and -SS003 and EB-012419 were qualified using a "J/UJ".

Synectics # 280-121853-1

Lab Work Order# J121853-1: (APN 32404629A & APN 32404730)

PAHs by EPA Method 8270C SIM

- MS/MSDs, LCS and sample duplicate RPDs and/or triplicate RSD values were outside QC limits for select PAHs in sample MRS03-APN32404730-SS001, -SS002, and –SS003. Data were qualified using "J" for detected results.

Metals by EPA Method 6010B

- MS/MSDs, sample duplicate RPD and/or triplicate RSD values were outside QC limits for antimony, lead, and zinc in affected samples MRS03-APN32404629A-SS001, -SS002, and -SS003 were qualified using "J/UJ".
- Interference check sample outside accepted criteria for antimony in samples MRS03-APN32404629A-SS1001, -SS1002, -SS1003, -SS2001, -SS2002, and -SS2003 were qualified using a "UJ."

Synectics # 280-124655-1

Lab Work Order# J124655-1: (APN 32439031)

Metals by EPA Method 6010B

- Interference check sample was outside QC limits for copper, lead and zinc. Affected samples MRS03-APN32439031-SS2001, -SS2002, and -SS2003 were qualified using a "J."
- MS/MSD recoveries for antimony, copper, lead, and zinc exceeded QC limits. Affected samples MRS03-APN32439031-SS001, -SS002, and -SS003 were qualified using a "J/UJ."

Synectics #280-122201-1

Lab Work Order# J122201-1: (APN 32404206A & APN 31021963)

PAHs by EPA Method 8270C SIM

- MS/MSD %R, RPD, and/or triplicate RSD recoveries were outside QC limits for select PAHs in affected samples MRS03-APN31021063-SS001 through –SS003 and MRS03-APN32404206A-SS1001, -SS1002, and -SS1003 were qualified using a "J" for detected results.
- Extraction holding time was exceeded for EB-040219. Data was qualified using "UJ".
- Surrogate recovery exceeded QC limits in EB-040319. Data are qualified using "UJ".

Metals by EPA Method 6010B

- MS recoveries exceeded QC limits for antimony, copper, lead, and zinc. Affected samples MRS03-APN32404206A-SS1003, MRS03-APN31021063-SS002 and –SS1003 were qualified using a "J/UJ". Antimony in samples MRS03-APN31021063-SS001, -SS002, and –SS003 were qualified using a "R" (rejected) due to extremely low recoveries in MS/MSD.

Synectics # 280-122205-1

Lab Work Order# J122205-1: (APN 32405206A)

PAHs by EPA Method 8270C SIM

- MS/MSD recoveries, MSD RPD and/or triplicate RSD exceeded QC limits for select PAHs in samples MRS03-APN32405206A- SS001, -SS002, -SS003, -SS1003, and -SS2001 were qualified using either "J/UJ".
- Surrogate recoveries exceeded QC limits in samples APN32405206A- SS1003 and –SS2001 for select PAHs. Data were qualified using "J/UJ".

Metals by EPA Method 6010B

- MS percent recoveries were outside QC limits for antimony, copper, lead and zinc in affected samples MRS03-APN32405206A- SS001, -SS002, and -SS003. Copper, lead, and zinc were qualified using a "J". Antimony was qualified using a "J" for detected results in affected samples MRS03-APN32405206A-SS001 and a "UJ" for non-detects in samples MRS03-APN32405206A-SS002 and -SS003.

Synectics # 280-123793-1

Lab Work Order# J123793-1: (APN 32405174 & APN 32436020)

PAHs by EPA Method 8270C SIM

- Extraction holding time was exceeded in samples MRS03-APN32436020-SS1001 through –SS1003 for all PAHs. Data were qualified using a "J" for detected results.
- LCS recoveries of naphthalene and 2-methlynaphthalene exceeded QC limits. These analytes in affected sample MRS03-APN32405174-SS2002 were qualified using a "J".
- MS percent recoveries, MS/MSD RPDs and/or laboratory triplicate RSDs were outside QC limits for samples MRS03-APN32436020-SS1001 and -SS1002. Select PAHs were qualified using a "J" for detected results. No impact on non-detect data.

Metals by EPA Method 6010B

- MS percent recoveries were outside QC limits for antimony, copper, and zinc which affected samples MRS03-APN32405174-SS1002, -SS1003 and MRS03-APN32436020-SS1001 and –SS1002. Antimony in sample MRS03-APN32436020-SS1001 was qualified using a "R" for non-detect and UJ for the other samples. Copper, lead, and zinc were qualified using a "J" for detected results in all four samples.

Synectics # 280-124118-1

Lab Work Order# J124118-1: (APN 32405263A)

PAHs by EPA Method 8270C SIM

- Ending continuing calibration verification (CCV) % difference was recovered above the QC limit for benzo(a)pyrene, benzo(b)fluoranthene, benzo(g,h,i)perylene, dibenz(a,h)anthracene, and indeno(1,2,3 -cd)pyrene in samples APN32405263A-SS001, -SS002, and -SS003. Data were qualified using a "J" for detected results.
- Extraction holding time was exceeded in samples APN32405263A-SS001, -SS002, and -SS003. Detections for select PAHs were qualified using a "J" and non-detects were qualified using a "R" in affected sample APN32405263A-SS001 through –SS003.

<u>Metals by EPA Method 6010B</u>

- Interference check sample was outside QC limits for antimony, copper, and zinc. Samples MRS03- APN32405263A-SS001, -SS002, and -SS003 for copper and zinc were qualified using a "J." Antimony non-detect results were qualified using a "R" (rejected) due to potential for negative bias.
- MS/MSD recoveries were outside QC limits for antimony, lead, and zinc. Data in samples APN32405263A-SS001, -SS002, and -SS003 for lead and zinc were qualified using a "J/UJ". Non-detect results for antimony were qualified using a "R" (rejected) due to low MS/MSD recoveries and no post-spike was analyzed.
- Trace level of lead was detected in the laboratory blank. Lead result in EB-051619 was adjusted to non-detect at LOQ.

Synectics # 280-129562-1

Lab Work Order# J129562-1: (APN 32439036 & APN 32439037)

<u>PAHs by EPA Method 8270C SIM</u>

- Surrogate recoveries exceeded QC limits in samples MRS03-APN32439036-SS002, -SS1001, -SS1002, -SS1003, -SS2002, and MRS03-APN32439037-SS2001 for select PAHs. Data were qualified using "J/UJ".
- MS percent recoveries and/or MSD RPD were outside control limits in affected sample MRS03-APN32439036-SS1001 for select PAHs. Data were qualified J/UJ.

<u>Metals by EPA Method 6010B</u>

- Interference check sample ICSA was outside QC limits for antimony, copper, and lead. Samples MRS03-APN32439036-SS001 through -SS2003 for antimony were qualified using a "UJ" for antimony.
- MS percent recoveries were outside control limits for antimony, copper, lead, and zinc. Analyte data in affected sample APN32439036-SS1001 were qualified using a "J/UJ".

Synectics # 280-129643-1

Lab Work Order# J129643-1: (APN 32439031)

<u>PAHs by EPA Method 8270C SIM</u>

- LCS recoveries slightly exceeded the QC limits. Therefore, data for select PAHs were qualified using a “J” in affected samples MRS03-APN32439031- SS3001, -SS3002, -SS4001, SS4002, and -SS4003.
- MSD % recovery and MS/MSD RPDs were outside control limits for samples MRS03-APN32439031-SS3003 for anthracene, benzo(a)pyrene, and dibenz(a,h)anthracene. Analyte data were qualified using a “J” for detected results.

<u>Metals by EPA Method 6010B</u>

- MS recoveries were outside QC limits for antimony, lead, and zinc. Sample MRS03-APN32439031- SS3003 was qualified using a “J” for lead and zinc for detected results and “UJ” for antimony in not-detected results.

Synectics # 280-129867-1

Lab Work Order# J129867-1: (APN 32404644)

<u>PAHs by EPA Method 8270C SIM</u>

- Surrogate 2-Fluorobiphenyl was recovered outside of the QC limits in EB-101619. Phenanthrene and pyrene data in EB-101610 were qualified using a “J”.

<u>Metals by EPA Method 6010B</u>

- Interference check sample was outside QC limits for antimony. Samples MRS03-APN32404664-SS001, -SS002, and -SS003for antimony were qualified using a “UJ.”.

Synectics # 280-129870-1

Lab Work Order# J129870-1: (APN 32436012)

<u>Metals by EPA Method 6010B</u>

- MS/MSD exceeded criteria for antimony and zinc. Results for these metals in the spiked sample (MRS03-APN32436012-SS3002) were qualified as J/UJ.

Synectics # 280-129935-1

Lab Work Order# J129935-1: (APN 32404277A & APN 32405269)

<u>Metals by EPA Method 6010B</u>

- MS/MSD exceeded criteria for antimony, lead, and zinc. Results for these metals in the spiked sample (MRS03-APN32405269-SS1002) were qualified as J/UJ.
- Interference check sample exceeded QC limits for antimony. Antimony data for samples APN32405269-SS003, -SS1001 through -SS1003, and -SS2001 through –SS2003 were qualified using an UJ.

Synectics # 280-130127-1

Lab Work Order# J130127-1: (APN 32405174)

<u>PAHs by EPA Method 8270C SIM</u>

- Trace levels of chrysene and benzo(a)anthracene were detected in the laboratory blank. Sample results for APN32405174-SS3001 and –SS4001 were adjusted to non-detect at LOQ.

- Surrogate recoveries exceeded QC limits in samples APN32405174-SS3003, –SS4001, and –SS4002. PAHs were qualified using "J" for all detected results. There is no impact on non-detect data.

<u>Metals by EPA Method 6010B</u>

- Interference check sample for antimony exceeded QC limits. Samples APN32405174-SS3001 through –SS3003 and –SS4001 through –SS4003 were qualified using an UJ for antimony.
- MS/MSD percent recovery was outside QC limits for antimony in sample MRS03-APN32405174-SS3002. Not-detected result for antimony was qualified using a "UJ" due to very low MS recovery.

Synectics # 280-130167-1

Lab Work Order# J130167-1: (APN 32404211C & APN 32404582)

<u>PAHs by EPA Method 8270C SIM</u>

- Extraction holding time was slightly exceeded in EB-102219. Detected and non-detected PAHs were qualified using J/UJ.
- Surrogate recovery for Terphenyl-d14 was outside QC limits in samples MRS03-APN32404211C-SS1001 and –SS1003. PAHs were qualified using "J" for all detected results. There is no impact on non-detect data.

<u>Metals by EPA Method 6010B</u>

- Interference check sample results outside QC criteria in samples MRS03-APN32404211C-SS001, -SS002, -SS003, -SS1001, -SS1002, -SS1003, -SS2001, -SS2002, and -SS2003 for antimony were qualified using a "UJ" for antimony in detected results.

- MS/MSD and MS RPD values outside the control limits for copper, lead, and zinc in sample MRS03-APN32404211C-SS1001. Detected results for copper, lead and zinc were qualified using a "J". Non-detect result for antimony was qualified using a "UJ" due to very low MS recovery.

Synectics # 280-130208-1

Lab Work Order# J130208-1: (APN 32404578)

<u>PAHs by EPA Method 8270C SIM</u>

- Surrogate recoveries for 2-Fluorobiphenyl and Terphenyl-d14 were outside of the QC limits in sample APN32404578-SS001 and –SS002. PAHs were qualified using a "J" for all detected results.

<u>Metals by EPA Method 6010B</u>

- Interference check sample exceeded QC limits for antimony. Data for antimony in samples MRS03-APN32404578-SS001, -SS002, and -SS003 were qualified using an UJ.

Synectics # 280-130358-1

Lab Work Order# J130358-1: (APN 32404727 & APN32436008)

<u>PAHs by EPA Method 8270C SIM</u>

- Extraction holding time was slightly exceeded for PAHs in samples MRS03-APN3246008-SS001, -SS002, and -SS003; -SS1001 through –SS1003, -SS2001 through –SS2003. Detections were qualified with a "J" and non-detects with "UJ".

<u>Metals by EPA Method 6010B</u>

- Interference check sample results outside the acceptance criteria in affected samples MRS03-APN32404727-SS001, -SS002, - and -SS003; MRS03-APN3246008-SS001, -SS002, - and -SS003; -SS1001 and –SS1003; and SS2001, -SS002, - and -SS003; for antimony were qualified using a "UJ" for antimony in non-detected results.
- Due to low MS recoveries, sample MRS03-APN3246008-SS1002 was qualified for antimony using R (rejected) and lead and zinc were qualified using a J for detected results.

Synectics # 280-130428-1

Lab Work Order# J130428-1: (APN 32439031)

<u>PAHs by EPA Method 8270C SIM</u>

- MS/MSD recoveries and MS/MSD RPD values were outside control limits for select PAHs in affected samples: MRS03-APN332439031-SS5002, which was qualified using a "J" for detected results.

<u>Metals by EPA Method 6010B</u>

- Interference check and MS/MSD recoveries were outside control limits for antimony and zinc. Affected samples MRS03-APN332439031- SS35001, -SS5002, -SS5003, -SS6002, and –SS6003 were qualified using a "UJ" for antimony, and affected sample MRS03-APN332439031- SS5002 was qualified using "J" for zinc.

C5.0 DATA VALIDATION RESULTS

Analytical data collected at the Former Skeet Range MRS03, Kingman GTG Gunnery Range remedial investigation activities were reviewed and validated by Synectics in Sacramento, California. Data validation was conducted in accordance with *Quality Systems Manual for Environmental Laboratories, version 5.1 (DoD, 2017),* DoD General Data Validation Guidelines (DoD, 2018a), DoD Data Validation Guidelines Module 1: Data Validation Procedure for Organic Analysis by GC/MS (SW-846 8260, 8270) (DoD, 2018b), and blank data evaluation for metals analysis based on the DoD Module 2: Data Validation Procedure for Metals by ICP-OES (SW-846 6010) (DoD, 2018c), and the QA/QC criteria specified in the Final QAPP Addendum (NOREAS, 2018), Field Change Form Request (FCRF)-001 (NOREAS, 2019a), and FCRF-002 (NOREAS, 2019b).

This assessment has been made through a combination of automated data review (ADR) and supplemental manual review. Data were subjected to a combination of 90 percent Stage 3 Validation Electronic and Manual (S3VEM) and 10 percent Stage 4 Validation Electronic and Manual (S4VEM), involving manual re-quantifications and recalculations from instrument output. Data validation included a review of sample preservation/condition, cooler temperature, verification of analytes, methods, quantitation, reporting limits, and technical holding times; gas chromatography/mass spectrometer (GC/MS) instrument tune, initial and continuing calibration verifications; laboratory blanks; ICP Interference Check Samples (metals), surrogates, LCS and MS/MSD; and field QC sample data (as applicable). In addition, field sampling records were reviewed to assess the potential for any field conditions that adversely impact data quality. Relevant data validation qualifiers applied during data validation are defined as follows:

- U (Undetected) – The analyte was analyzed for, but not detected.
- UJ - The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.
- J (Estimated) – Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria
- R - The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.

With the exception of a few analytes qualified with “R”, as identified in Section 4.0, third-party validation reports indicated that data associated with samples collected during the soil sampling from January 2019 through October 2019 are usable and acceptable with the appropriate data qualifiers. Overall precision and accuracy goals identified in the project Final QAPP Addendum were met. The analytical results and associated data validation qualifiers associated with the QC excursions are provided for key constituents of concern in Section C4.0 and in Tables 6-1and 6-2 in the Remedial Investigation. The majority of the QC excursions were related to holding time exceedances, matrix interference caused by soil samples, laboratory blank artifacts, laboratory control sample or calibration excursions caused by poor performing compounds. Holding time exceedances were related to unforeseen laboratory processing limitations. As the source of the contaminants of concern are from solid-phase skeet particles and shot pellets, potential volatilization losses from holding time exceedances are not considered to significant affect data usability. Copies of the analytical laboratory reports, including COC forms and data validation reports, are provided in Appendix B.

Third-party validation reported that analytical data associated with nine APN parcels (APNs: 31021063C, 31021063D, 31021063E, 32404242, 32404550, 32404558, 32405172, 32405212, and 32436008) were rejected using an “R” qualifier due to holding time exceedances (greater than 2 times), negative bias indicated by low LCS or surrogate recoveries, and matrix interference demonstrated by poor MS/MSD recoveries.

Data validation reported that MS/MSD recoveries for antimony were outside of the acceptance limits in select samples collected at six (6) parcels (APNs: 31021063, 32404242, 32404550, 32405172, 32405212, and 32436008). This excursion resulted in rejection of antimony results in 16 samples. This anomaly is likely related to the limitations in the digestion procedure used for ICP analysis resulting in lower antimony recoveries. As antimony is not considered a primary risk-driver for the Site, this data quality issue would not impact remediation decisions for the Site. In addition, data validation resulted in rejection (“R” qualified) of PAHs results in APN 32404558 due to method holding time exceedance. These parcels were resampled during 2020. Data will be presented in a separate report.

Overall, project data quality objectives were met, and the data were deemed acceptable. A total of 4,889 results (34.7%) out of the 14,076 results (sample and field QC samples) reported are qualified based on independent validation, and 423 results (3%) have been rejected. Trace values, defined as results that are qualified as estimated because they fall between the detection limit and the limit of quantitation, are not counted as qualified results in the above count.

Analytical results are presented in Tables 6-2 and 6-3 in the Remedial Investigation Report. The chain-of-custody records, laboratory analytical results, and data validation reports are provided as a part of the parcel reports in Attachment 1.

Abbreviations and Notes:

µg/L - micrograms per liter
J - estimated value; the analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria
R- rejected
RI - Remedial investigation
U - analyte was analyzed for, but not detected above the limit of detection
UJ - estimated non-detect; the analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.
