Data appear Gamma Distributed at 5% Significance Level

Assuming Normal Distribution

95% Normal UCL		**95% UCLs (Adjusted for Skewness)**	
95% Student's-t UCL	3.302	95% Adjusted-CLT UCL (Chen-1995)	3.264
		95% Modified-t UCL (Johnson-1978)	3.298

Nonparametric Distribution Free UCLs

95% CLT UCL	3.29	95% Jackknife UCL	3.302
95% Standard Bootstrap UCL	3.286	95% Bootstrap-t UCL	3.281
95% Hall's Bootstrap UCL	3.27	95% Percentile Bootstrap UCL	3.278
95% BCA Bootstrap UCL	3.273		
90% Chebyshev(Mean, Sd) UCL	3.333	95% Chebyshev(Mean, Sd) UCL	3.377
97.5% Chebyshev(Mean, Sd) UCL	3.438	99% Chebyshev(Mean, Sd) UCL	3.558

Suggested UCL to Use
Data appear Gamma, May want to try Gamma Distribution

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

Note: For highly negatively-skewed data, confidence limits (e.g., Chen, Johnson, Lognormal, and Gamma) may not be reliable. Chen's and Johnson's methods provide adjustments for positvely skewed data sets.

Suggested UCL to Use

Data appear Normal, May want to try Normal Distribution

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

Note: For highly negatively-skewed data, confidence limits (e.g., Chen, Johnson, Lognormal, and Gamma) may not be reliable. Chen's and Johnson's methods provide adjustments for positvely skewed data sets.

BENZ(A)ANTHRACENE

General Statistics

Total Number of Observations	6	Number of Distinct Observations	6
		Number of Missing Observations	0
Minimum	1.92	Mean	2.248
Maximum	2.73	Median	2.118
SD	0.338	Std. Error of Mean	0.138
Coefficient of Variation	0.15	Skewness	0.799
Mean of logged Data	0.801	SD of logged Data	0.146

Note: Sample size is small (e.g., <10), if data are collected using ISM approach you may want to use Chebyshev UCL to estimate EPC (ITRC, 2012). Chebyshev UCL can be computed using the Nonparametric and All UCL Options.

Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

Note: For highly negatively-skewed data, confidence limits (e.g., Chen, Johnson, Lognormal, and Gamma) may not be reliable. Chen's and Johnson's methods provide adjustments for positvely skewed data sets.

Maximum	2.165	Median	2.135
SD	0.0415	Std. Error of Mean	0.0169
Coefficient of Variation	0.0195	Skewness	-1.044
Mean of logged Data	0.754	SD of logged Data	0.0197

Note: Sample size is small (e.g., <10), if data are collected using ISM approach
you may want to use Chebyshev UCL to estimate EPC (ITRC, 2012).
Chebyshev UCL can be computed using the Nonparametric and All UCL Options.

Nonparametric Distribution Free UCL Statistics
Data appear Normal Distributed at 5% Significance Level

Assuming Normal Distribution

95% Normal UCL		**95% UCLs (Adjusted for Skewness)**	
95% Student's-t UCL	2.159	95% Adjusted-CLT UCL (Chen-1995)	2.145
		95% Modified-t UCL (Johnson-1978)	2.158

Nonparametric Distribution Free UCLs

95% CLT UCL	2.153	95% Jackknife UCL	2.159
95% Standard Bootstrap UCL	2.151	95% Bootstrap-t UCL	2.15
95% Hall's Bootstrap UCL	2.145	95% Percentile Bootstrap UCL	2.148
95% BCA Bootstrap UCL	2.146		
90% Chebyshev(Mean, Sd) UCL	2.176	95% Chebyshev(Mean, Sd) UCL	2.199
97.5% Chebyshev(Mean, Sd) UCL	2.231	99% Chebyshev(Mean, Sd) UCL	2.293

Suggested UCL to Use

Data appear Normal, May want to try Normal Distribution

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

Note: For highly negatively-skewed data, confidence limits (e.g., Chen, Johnson, Lognormal, and Gamma) may not be reliable. Chen's and Johnson's methods provide adjustments for positvely skewed data sets.

97.5% Chebyshev(Mean, Sd) UCL	3.555	99% Chebyshev(Mean, Sd) UCL	3.707

Suggested UCL to Use

Data appear Normal, May want to try Normal Distribution

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

PYRENE

General Statistics

Total Number of Observations	6	Number of Distinct Observations	6
		Number of Missing Observations	0
Minimum	3.165	Mean	4.276
Maximum	5.93	Median	3.965
SD	1.221	Std. Error of Mean	0.499
Coefficient of Variation	0.286	Skewness	0.411

Suggested UCL to Use
Data appear Normal, May want to try Normal Distribution

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

Note: For highly negatively-skewed data, confidence limits (e.g., Chen, Johnson, Lognormal, and Gamma) may not be reliable. Chen's and Johnson's methods provide adjustments for positvely skewed data sets.

Suggested UCL to Use

Data appear Normal, May want to try Normal Distribution

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

95% Normal UCL		95% UCLs (Adjusted for Skewness)	
95% Student's-t UCL	4.578	95% Adjusted-CLT UCL (Chen-1995)	4.613
		95% Modified-t UCL (Johnson-1978)	4.619

Nonparametric Distribution Free UCLs

95% CLT UCL	4.351	95% Jackknife UCL	4.578
95% Standard Bootstrap UCL	4.265	95% Bootstrap-t UCL	4.973
95% Hall's Bootstrap UCL	4.331	95% Percentile Bootstrap UCL	4.286
95% BCA Bootstrap UCL	4.359		
90% Chebyshev(Mean, Sd) UCL	5.182	95% Chebyshev(Mean, Sd) UCL	6.017
97.5% Chebyshev(Mean, Sd) UCL	7.174	99% Chebyshev(Mean, Sd) UCL	9.449

Suggested UCL to Use
Data appear Normal, May want to try Normal Distribution

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

DIBENZ(A,H)ANTHRACENE

General Statistics

Total Number of Observations	6	Number of Distinct Observations	5
		Number of Missing Observations	0
Minimum	3.045	Mean	3.233
Maximum	3.33	Median	3.265
SD	0.1	Std. Error of Mean	0.0409
Coefficient of Variation	0.031	Skewness	-1.628
Mean of logged Data	1.173	SD of logged Data	0.0316

Note: Sample size is small (e.g., <10), if data are collected using ISM approach
you may want to use Chebyshev UCL to estimate EPC (ITRC, 2012).
Chebyshev UCL can be computed using the Nonparametric and All UCL Options.

Nonparametric Distribution Free UCL Statistics

Note: Sample size is small (e.g., <10), if data are collected using ISM approach
you may want to use Chebyshev UCL to estimate EPC (ITRC, 2012).
Chebyshev UCL can be computed using the Nonparametric and All UCL Options.

Nonparametric Distribution Free UCL Statistics

Data do not follow a Discernible Distribution (0.05)

Assuming Normal Distribution

95% Normal UCL		**95% UCLs (Adjusted for Skewness)**	
95% Student's-t UCL	2.195	95% Adjusted-CLT UCL (Chen-1995)	2.071
		95% Modified-t UCL (Johnson-1978)	2.181

Nonparametric Distribution Free UCLs

95% CLT UCL	2.161	95% Jackknife UCL	2.195
95% Standard Bootstrap UCL	2.15	95% Bootstrap-t UCL	2.138
95% Hall's Bootstrap UCL	2.093	95% Percentile Bootstrap UCL	2.119
95% BCA Bootstrap UCL	2.108		
90% Chebyshev(Mean, Sd) UCL	2.283	95% Chebyshev(Mean, Sd) UCL	2.405
97.5% Chebyshev(Mean, Sd) UCL	2.575	99% Chebyshev(Mean, Sd) UCL	2.908

Suggested UCL to Use

95% Student's-t UCL	2.195	or 95% Modified-t UCL	2.181

Recommended UCL exceeds the maximum observation

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.

These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

Note: For highly negatively-skewed data, confidence limits (e.g., Chen, Johnson, Lognormal, and Gamma) may not be reliable. Chen's and Johnson's methods provide adjustments for positvely skewed data sets.

95% CLT UCL	2.117	95% Jackknife UCL	2.151
95% Standard Bootstrap UCL	2.103	95% Bootstrap-t UCL	2.084
95% Hall's Bootstrap UCL	2.057	95% Percentile Bootstrap UCL	2.08
95% BCA Bootstrap UCL	2.065		
90% Chebyshev(Mean, Sd) UCL	2.24	95% Chebyshev(Mean, Sd) UCL	2.365

97.5% Chebyshev(Mean, Sd) UCL	2.537	99% Chebyshev(Mean, Sd) UCL	2.875

Suggested UCL to Use

95% Student's-t UCL	2.151	or 95% Modified-t UCL	2.138

Recommended UCL exceeds the maximum observation

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

Note: For highly negatively-skewed data, confidence limits (e.g., Chen, Johnson, Lognormal, and Gamma) may not be reliable. Chen's and Johnson's methods provide adjustments for positvely skewed data sets.

97.5% Chebyshev(Mean, Sd) UCL	3.631	99% Chebyshev(Mean, Sd) UCL	4.306

Suggested UCL to Use

Data appear Normal, May want to try Normal Distribution

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

Note: For highly negatively-skewed data, confidence limits (e.g., Chen, Johnson, Lognormal, and Gamma) may not be reliable. Chen's and Johnson's methods provide adjustments for positvely skewed data sets.

DIBENZ(A,H)ANTHRACENE

95% CLT UCL	22.35	95% Jackknife UCL	25.03
95% Standard Bootstrap UCL	21.61	95% Bootstrap-t UCL	8304
95% Hall's Bootstrap UCL	4122	95% Percentile Bootstrap UCL	24.91
95% BCA Bootstrap UCL	32.14		

90% Chebyshev(Mean, Sd) UCL	32.15	95% Chebyshev(Mean, Sd) UCL	41.97
97.5% Chebyshev(Mean, Sd) UCL	55.6	99% Chebyshev(Mean, Sd) UCL	82.37

Suggested UCL to Use

95% Hall's Bootstrap UCL 4122

Recommended UCL exceeds the maximum observation

In Case Bootstrap t and/or Hall's Bootstrap yields an unreasonably large UCL value, use 97.5% or 99% Chebyshev (Mean, Sd) UCL

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

PYRENE

General Statistics

Total Number of Observations	6	Number of Distinct Observations	5
		Number of Missing Observations	0
Minimum	3.2	Mean	3.593
Maximum	4.51	Median	3.305
SD	0.544	Std. Error of Mean	0.222
Coefficient of Variation	0.151	Skewness	1.262
Mean of logged Data	1.27	SD of logged Data	0.144

Note: Sample size is small (e.g., <10), if data are collected using ISM approach
you may want to use Chebyshev UCL to estimate EPC (ITRC, 2012).
Chebyshev UCL can be computed using the Nonparametric and All UCL Options.

Data appear Normal, May want to try Normal Distribution

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

Suggested UCL to Use

Data appear Approximate Lognormal, May want to try Lognormal Distribution

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

PYRENE

General Statistics

Total Number of Observations	6	Number of Distinct Observations	6
		Number of Missing Observations	0
Minimum	3.005	Mean	7.078
Maximum	18.7	Median	5.145
SD	6.062	Std. Error of Mean	2.475
Coefficient of Variation	0.857	Skewness	1.851
Mean of logged Data	1.709	SD of logged Data	0.734

Note: Sample size is small (e.g., <10), if data are collected using ISM approach
you may want to use Chebyshev UCL to estimate EPC (ITRC, 2012).
Chebyshev UCL can be computed using the Nonparametric and All UCL Options.

Nonparametric Distribution Free UCL Statistics
Data appear Approximate Normal Distributed at 5% Significance Level

Assuming Normal Distribution

95% Hall's Bootstrap UCL	2.119	95% Percentile Bootstrap UCL	2.128
95% BCA Bootstrap UCL	2.12		
90% Chebyshev(Mean, Sd) UCL	2.182	95% Chebyshev(Mean, Sd) UCL	2.227
97.5% Chebyshev(Mean, Sd) UCL	2.29	99% Chebyshev(Mean, Sd) UCL	2.414

Suggested UCL to Use

Data appear Normal, May want to try Normal Distribution

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

Note: For highly negatively-skewed data, confidence limits (e.g., Chen, Johnson, Lognormal, and Gamma) may not be reliable. Chen's and Johnson's methods provide adjustments for positvely skewed data sets.

COPPER

General Statistics

Total Number of Observations	6	Number of Distinct Observations	6
		Number of Missing Observations	0
Minimum	14.9	Mean	17.43
Maximum	19.2	Median	17.7
SD	1.776	Std. Error of Mean	0.725
Coefficient of Variation	0.102	Skewness	-0.401
Mean of logged Data	2.854	SD of logged Data	0.104

Note: Sample size is small (e.g., <10), if data are collected using ISM approach
you may want to use Chebyshev UCL to estimate EPC (ITRC, 2012).
Chebyshev UCL can be computed using the Nonparametric and All UCL Options.

Nonparametric Distribution Free UCL Statistics
Data appear Normal Distributed at 5% Significance Level

Assuming Normal Distribution

95% Normal UCL		95% UCLs (Adjusted for Skewness)	
95% Student's-t UCL	18.89	95% Adjusted-CLT UCL (Chen-1995)	18.5
		95% Modified-t UCL (Johnson-1978)	18.87

Nonparametric Distribution Free UCLs

95% CLT UCL	18.63	95% Jackknife UCL	18.89
95% Standard Bootstrap UCL	18.51	95% Bootstrap-t UCL	18.79
95% Hall's Bootstrap UCL	18.28	95% Percentile Bootstrap UCL	18.55
95% BCA Bootstrap UCL	18.52		
90% Chebyshev(Mean, Sd) UCL	19.61	95% Chebyshev(Mean, Sd) UCL	20.59
97.5% Chebyshev(Mean, Sd) UCL	21.96	99% Chebyshev(Mean, Sd) UCL	24.65

Suggested UCL to Use
Data appear Normal, May want to try Normal Distribution

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

Note: For highly negatively-skewed data, confidence limits (e.g., Chen, Johnson, Lognormal, and Gamma) may not be reliable. Chen's and Johnson's methods provide adjustments for positvely skewed data sets.

Recommended UCL exceeds the maximum observation

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

Note: For highly negatively-skewed data, confidence limits (e.g., Chen, Johnson, Lognormal, and Gamma) may not be reliable. Chen's and Johnson's methods provide adjustments for positvely skewed data sets.

95% Hall's Bootstrap UCL	10.29	95% Percentile Bootstrap UCL	11.62
95% BCA Bootstrap UCL	11.86		
90% Chebyshev(Mean, Sd) UCL	15.15	95% Chebyshev(Mean, Sd) UCL	18.33
97.5% Chebyshev(Mean, Sd) UCL	22.73	99% Chebyshev(Mean, Sd) UCL	31.38

Suggested UCL to Use

Data appear Normal, May want to try Normal Distribution

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

Nonparametric UCL Statistics for Uncensored Full Data Sets

User Selected Options	
Date/Time of Computation	ProUCL 5.17/23/2021 11:37:39 AM
From File	04152_153.xls
Full Precision	OFF
Confidence Coefficient	95%
Number of Bootstrap Operations	2000

COPPER

General Statistics

Total Number of Observations	6	Number of Distinct Observations	6
		Number of Missing Observations	0
Minimum	15	Mean	18
Maximum	21.9	Median	17.8
SD	2.381	Std. Error of Mean	0.972
Coefficient of Variation	0.132	Skewness	0.656
Mean of logged Data	2.883	SD of logged Data	0.13

Note: Sample size is small (e.g., <10), if data are collected using ISM approach
you may want to use Chebyshev UCL to estimate EPC (ITRC, 2012).
Chebyshev UCL can be computed using the Nonparametric and All UCL Options.

Nonparametric Distribution Free UCL Statistics
Data appear Normal Distributed at 5% Significance Level

Assuming Normal Distribution

95% Normal UCL		95% UCLs (Adjusted for Skewness)

However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

Note: For highly negatively-skewed data, confidence limits (e.g., Chen, Johnson, Lognormal, and Gamma) may not be reliable. Chen's and Johnson's methods provide adjustments for positvely skewed data sets.

DIBENZ(A,H)ANTHRACENE

General Statistics

Total Number of Observations	6	Number of Distinct Observations	6
		Number of Missing Observations	0
Minimum	2.76	Mean	3.358
Maximum	4.26	Median	3.295
SD	0.49	Std. Error of Mean	0.2
Coefficient of Variation	0.146	Skewness	1.318
Mean of logged Data	1.203	SD of logged Data	0.14

Note: Sample size is small (e.g., <10), if data are collected using ISM approach you may want to use Chebyshev UCL to estimate EPC (ITRC, 2012). Chebyshev UCL can be computed using the Nonparametric and All UCL Options.

Nonparametric Distribution Free UCL Statistics

Data appear Approximate Normal Distributed at 5% Significance Level

Assuming Normal Distribution

90% Chebyshev(Mean, Sd) UCL	2.263	95% Chebyshev(Mean, Sd) UCL	2.412
97.5% Chebyshev(Mean, Sd) UCL	2.62	99% Chebyshev(Mean, Sd) UCL	3.027

Suggested UCL to Use

95% Student's-t UCL	2.155	or 95% Modified-t UCL	2.139

Recommended UCL exceeds the maximum observation

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

Note: For highly negatively-skewed data, confidence limits (e.g., Chen, Johnson, Lognormal, and Gamma) may not be reliable. Chen's and Johnson's methods provide adjustments for positvely skewed data sets.

COPPER

General Statistics

Total Number of Observations	6	Number of Distinct Observations	6
		Number of Missing Observations	0
Minimum	10.8	Mean	13.13
Maximum	14.3	Median	13.25
SD	1.264	Std. Error of Mean	0.516
Coefficient of Variation	0.0963	Skewness	-1.469
Mean of logged Data	2.571	SD of logged Data	0.102

Note: Sample size is small (e.g., <10), if data are collected using ISM approach
you may want to use Chebyshev UCL to estimate EPC (ITRC, 2012).
Chebyshev UCL can be computed using the Nonparametric and All UCL Options.

Nonparametric Distribution Free UCL Statistics
Data appear Normal Distributed at 5% Significance Level

Assuming Normal Distribution

95% Normal UCL		95% UCLs (Adjusted for Skewness)	
95% Student's-t UCL	14.17	95% Adjusted-CLT UCL (Chen-1995)	13.65
		95% Modified-t UCL (Johnson-1978)	14.12

Nonparametric Distribution Free UCLs

95% CLT UCL	13.98	95% Jackknife UCL	14.17
95% Standard Bootstrap UCL	13.92	95% Bootstrap-t UCL	13.93
95% Hall's Bootstrap UCL	13.71	95% Percentile Bootstrap UCL	13.85
95% BCA Bootstrap UCL	13.72		
90% Chebyshev(Mean, Sd) UCL	14.68	95% Chebyshev(Mean, Sd) UCL	15.38
97.5% Chebyshev(Mean, Sd) UCL	16.36	99% Chebyshev(Mean, Sd) UCL	18.27

Suggested UCL to Use
Data appear Normal, May want to try Normal Distribution

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

Note: For highly negatively-skewed data, confidence limits (e.g., Chen, Johnson, Lognormal, and Gamma) may not be reliable. Chen's and Johnson's methods provide adjustments for positvely skewed data sets.

Suggested UCL to Use
Data appear Normal, May want to try Normal Distribution

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.

Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

BENZ(A)ANTHRACENE

General Statistics

Total Number of Observations	6	Number of Distinct Observations	6
		Number of Missing Observations	0
Minimum	21	Mean	56.32
Maximum	128	Median	43.75
SD	40.3	Std. Error of Mean	16.45
Coefficient of Variation	0.716	Skewness	1.341
Mean of logged Data	3.833	SD of logged Data	0.681

Note: Sample size is small (e.g., <10), if data are collected using ISM approach
you may want to use Chebyshev UCL to estimate EPC (ITRC, 2012).
Chebyshev UCL can be computed using the Nonparametric and All UCL Options.

Confidence Coefficient	95%
Number of Bootstrap Operations	2000

COPPER

General Statistics

Total Number of Observations	6	Number of Distinct Observations	6
		Number of Missing Observations	0
Minimum	11.4	Mean	13.52
Maximum	19.5	Median	12.15
SD	3.049	Std. Error of Mean	1.245
Coefficient of Variation	0.226	Skewness	2.077
Mean of logged Data	2.586	SD of logged Data	0.2

Note: Sample size is small (e.g., <10), if data are collected using ISM approach
you may want to use Chebyshev UCL to estimate EPC (ITRC, 2012).
Chebyshev UCL can be computed using the Nonparametric and All UCL Options.

Nonparametric Distribution Free UCL Statistics
Data do not follow a Discernible Distribution (0.05)

Assuming Normal Distribution

95% Normal UCL		**95% UCLs (Adjusted for Skewness)**	
95% Student's-t UCL	16.02	95% Adjusted-CLT UCL (Chen-1995)	16.69
		95% Modified-t UCL (Johnson-1978)	16.2

Nonparametric Distribution Free UCLs

95% CLT UCL	15.56	95% Jackknife UCL	16.02
95% Standard Bootstrap UCL	15.37	95% Bootstrap-t UCL	28.15
95% Hall's Bootstrap UCL	36.98	95% Percentile Bootstrap UCL	15.7
95% BCA Bootstrap UCL	16.38		
90% Chebyshev(Mean, Sd) UCL	17.25	95% Chebyshev(Mean, Sd) UCL	18.94
97.5% Chebyshev(Mean, Sd) UCL	21.29	99% Chebyshev(Mean, Sd) UCL	25.9

Suggested UCL to Use

95% Student's-t UCL	16.02	or 95% Modified-t UCL	16.2

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

LEAD

General Statistics

Total Number of Observations	6	Number of Distinct Observations	6
		Number of Missing Observations	0
Minimum	8.88	Mean	9.832
Maximum	11	Median	9.74
SD	0.925	Std. Error of Mean	0.378
Coefficient of Variation	0.0941	Skewness	0.203
Mean of logged Data	2.282	SD of logged Data	0.0938

Note: Sample size is small (e.g., <10), if data are collected using ISM approach

you may want to use Chebyshev UCL to estimate EPC (ITRC, 2012).
Chebyshev UCL can be computed using the Nonparametric and All UCL Options.

Nonparametric Distribution Free UCL Statistics
Data appear Normal Distributed at 5% Significance Level

Assuming Normal Distribution

95% Normal UCL		**95% UCLs (Adjusted for Skewness)**	
95% Student's-t UCL	10.59	95% Adjusted-CLT UCL (Chen-1995)	10.49
		95% Modified-t UCL (Johnson-1978)	10.6

Nonparametric Distribution Free UCLs

95% CLT UCL	10.45	95% Jackknife UCL	10.59

Suggested UCL to Use

Data appear Normal, May want to try Normal Distribution

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

Note: For highly negatively-skewed data, confidence limits (e.g., Chen, Johnson, Lognormal, and Gamma) may not be reliable. Chen's and Johnson's methods provide adjustments for positvely skewed data sets.

Nonparametric UCL Statistics for Uncensored Full Data Sets

User Selected Options	
Date/Time of Computation	ProUCL 5.17/23/2021 11:49:10 AM

95% BCA Bootstrap UCL	8.738		
90% Chebyshev(Mean, Sd) UCL	11.02	95% Chebyshev(Mean, Sd) UCL	13.13
97.5% Chebyshev(Mean, Sd) UCL	16.07	99% Chebyshev(Mean, Sd) UCL	21.84

Suggested UCL to Use
Data appear Normal, May want to try Normal Distribution

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

Note: For highly negatively-skewed data, confidence limits (e.g., Chen, Johnson, Lognormal, and Gamma) may not be reliable. Chen's and Johnson's methods provide adjustments for positvely skewed data sets.

95% BCA Bootstrap UCL	13.17		
90% Chebyshev(Mean, Sd) UCL	16.94	95% Chebyshev(Mean, Sd) UCL	20.19
97.5% Chebyshev(Mean, Sd) UCL	24.71	99% Chebyshev(Mean, Sd) UCL	33.58

Suggested UCL to Use

Data appear Normal, May want to try Normal Distribution

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

Note: For highly negatively-skewed data, confidence limits (e.g., Chen, Johnson, Lognormal, and Gamma) may not be reliable. Chen's and Johnson's methods provide adjustments for positvely skewed data sets.

COPPER

General Statistics

Total Number of Observations	6	Number of Distinct Observations	6
		Number of Missing Observations	0
Minimum	12.4	Mean	42.78
Maximum	88.7	Median	36.05
SD	31.19	Std. Error of Mean	12.73
Coefficient of Variation	0.729	Skewness	0.615
Mean of logged Data	3.492	SD of logged Data	0.837

Note: Sample size is small (e.g., <10), if data are collected using ISM approach
you may want to use Chebyshev UCL to estimate EPC (ITRC, 2012).
Chebyshev UCL can be computed using the Nonparametric and All UCL Options.

Nonparametric Distribution Free UCL Statistics
Data appear Normal Distributed at 5% Significance Level

Assuming Normal Distribution

95% Normal UCL		95% UCLs (Adjusted for Skewness)	
95% Student's-t UCL	68.44	95% Adjusted-CLT UCL (Chen-1995)	67.15
		95% Modified-t UCL (Johnson-1978)	68.98

Nonparametric Distribution Free UCLs

95% CLT UCL	63.73	95% Jackknife UCL	68.44
95% Standard Bootstrap UCL	62.06	95% Bootstrap-t UCL	85.56
95% Hall's Bootstrap UCL	98.83	95% Percentile Bootstrap UCL	61.97
95% BCA Bootstrap UCL	64.9		
90% Chebyshev(Mean, Sd) UCL	80.99	95% Chebyshev(Mean, Sd) UCL	98.29
97.5% Chebyshev(Mean, Sd) UCL	122.3	99% Chebyshev(Mean, Sd) UCL	169.5

Suggested UCL to Use
Data appear Normal, May want to try Normal Distribution

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

LEAD

General Statistics

Total Number of Observations	6	Number of Distinct Observations	6
		Number of Missing Observations	0
Minimum	9.69	Mean	13.53
Maximum	15.3	Median	14
SD	2.115	Std. Error of Mean	0.864
Coefficient of Variation	0.156	Skewness	-1.429
Mean of logged Data	2.593	SD of logged Data	0.172

Note: Sample size is small (e.g., <10), if data are collected using ISM approach

you may want to use Chebyshev UCL to estimate EPC (ITRC, 2012).
Chebyshev UCL can be computed using the Nonparametric and All UCL Options.

Nonparametric Distribution Free UCL Statistics
Data appear Normal Distributed at 5% Significance Level

Assuming Normal Distribution

95% Normal UCL		**95% UCLs (Adjusted for Skewness)**	
95% Student's-t UCL	15.27	95% Adjusted-CLT UCL (Chen-1995)	14.41
		95% Modified-t UCL (Johnson-1978)	15.19

Nonparametric Distribution Free UCLs

95% CLT UCL	14.95	95% Jackknife UCL	15.27

97.5% Chebyshev(Mean, Sd) UCL	3.448	99% Chebyshev(Mean, Sd) UCL	3.615

Suggested UCL to Use

Data appear Normal, May want to try Normal Distribution

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

Note: For highly negatively-skewed data, confidence limits (e.g., Chen, Johnson, Lognormal, and Gamma) may not be reliable. Chen's and Johnson's methods provide adjustments for positvely skewed data sets.

97.5% Chebyshev(Mean, Sd) UCL	95.98	99% Chebyshev(Mean, Sd) UCL	135

Suggested UCL to Use

Data appear Normal, May want to try Normal Distribution

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

Nonparametric UCL Statistics for Uncensored Full Data Sets

User Selected Options	
Date/Time of Computation	ProUCL 5.17/23/2021 12:25:10 PM
From File	05265.xls

COPPER

General Statistics

Total Number of Observations	6	Number of Distinct Observations	6
		Number of Missing Observations	0
Minimum	15.3	Mean	17.3
Maximum	18.9	Median	17.5
SD	1.54	Std. Error of Mean	0.629
Coefficient of Variation	0.089	Skewness	-0.284
Mean of logged Data	2.847	SD of logged Data	0.0901

Note: Sample size is small (e.g., <10), if data are collected using ISM approach
you may want to use Chebyshev UCL to estimate EPC (ITRC, 2012).
Chebyshev UCL can be computed using the Nonparametric and All UCL Options.

Nonparametric Distribution Free UCL Statistics
Data appear Normal Distributed at 5% Significance Level

Assuming Normal Distribution

95% Normal UCL		95% UCLs (Adjusted for Skewness)	
95% Student's-t UCL	18.57	95% Adjusted-CLT UCL (Chen-1995)	18.26
		95% Modified-t UCL (Johnson-1978)	18.55

Nonparametric Distribution Free UCLs

95% CLT UCL	18.33	95% Jackknife UCL	18.57
95% Standard Bootstrap UCL	18.27	95% Bootstrap-t UCL	18.59
95% Hall's Bootstrap UCL	17.96	95% Percentile Bootstrap UCL	18.23
95% BCA Bootstrap UCL	18.23		
90% Chebyshev(Mean, Sd) UCL	19.19	95% Chebyshev(Mean, Sd) UCL	20.04
97.5% Chebyshev(Mean, Sd) UCL	21.23	99% Chebyshev(Mean, Sd) UCL	23.56

Suggested UCL to Use
Data appear Normal, May want to try Normal Distribution

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

Note: For highly negatively-skewed data, confidence limits (e.g., Chen, Johnson, Lognormal, and Gamma) may not be reliable. Chen's and Johnson's methods provide adjustments for positvely skewed data sets.

LEAD

These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

Note: For highly negatively-skewed data, confidence limits (e.g., Chen, Johnson, Lognormal, and Gamma) may not be reliable. Chen's and Johnson's methods provide adjustments for positvely skewed data sets.

97.5% Chebyshev(Mean, Sd) UCL	76.41	99% Chebyshev(Mean, Sd) UCL	103.2

Suggested UCL to Use
Data appear Normal, May want to try Normal Distribution

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

LEAD

General Statistics

Total Number of Observations	6	Number of Distinct Observations	6
		Number of Missing Observations	0
Minimum	10.4	Mean	12.63
Maximum	14.2	Median	12.95
SD	1.392	Std. Error of Mean	0.568
Coefficient of Variation	0.11	Skewness	-0.768
Mean of logged Data	2.531	SD of logged Data	0.114

Note: Sample size is small (e.g., <10), if data are collected using ISM approach

you may want to use Chebyshev UCL to estimate EPC (ITRC, 2012).
Chebyshev UCL can be computed using the Nonparametric and All UCL Options.

Nonparametric Distribution Free UCL Statistics
Data appear Normal Distributed at 5% Significance Level

Assuming Normal Distribution

95% Normal UCL		**95% UCLs (Adjusted for Skewness)**

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

Note: For highly negatively-skewed data, confidence limits (e.g., Chen, Johnson, Lognormal, and Gamma) may not be reliable. Chen's and Johnson's methods provide adjustments for positvely skewed data sets.

FLUORANTHENE

General Statistics

Total Number of Observations	6	Number of Distinct Observations	6
		Number of Missing Observations	0
Minimum	24.1	Mean	42.5
Maximum	59.3	Median	42.1
SD	14.15	Std. Error of Mean	5.776
Coefficient of Variation	0.333	Skewness	-0.0333
Mean of logged Data	3.699	SD of logged Data	0.355

Note: Sample size is small (e.g., <10), if data are collected using ISM approach
you may want to use Chebyshev UCL to estimate EPC (ITRC, 2012).
Chebyshev UCL can be computed using the Nonparametric and All UCL Options.

Nonparametric Distribution Free UCL Statistics
Data appear Normal Distributed at 5% Significance Level

97.5% Chebyshev(Mean, Sd) UCL	17.5	99% Chebyshev(Mean, Sd) UCL	18.25

Suggested UCL to Use
Data appear Normal, May want to try Normal Distribution

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

Note: For highly negatively-skewed data, confidence limits (e.g., Chen, Johnson, Lognormal, and Gamma) may not be reliable. Chen's and Johnson's methods provide adjustments for positvely skewed data sets.

Suggested UCL to Use

Data appear Normal, May want to try Normal Distribution

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.

These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

Note: For highly negatively-skewed data, confidence limits (e.g., Chen, Johnson, Lognormal, and Gamma) may not be reliable. Chen's and Johnson's methods provide adjustments for positvely skewed data sets.

FLUORANTHENE

General Statistics

Total Number of Observations	6	Number of Distinct Observations	6
		Number of Missing Observations	0
Minimum	2.09	Mean	7.638
Maximum	12.3	Median	8.53
SD	4.276	Std. Error of Mean	1.746
Coefficient of Variation	0.56	Skewness	-0.404
Mean of logged Data	1.844	SD of logged Data	0.739

Note: Sample size is small (e.g., <10), if data are collected using ISM approach you may want to use Chebyshev UCL to estimate EPC (ITRC, 2012). Chebyshev UCL can be computed using the Nonparametric and All UCL Options.

95% BCA Bootstrap UCL	10.92		
90% Chebyshev(Mean, Sd) UCL	13.74	95% Chebyshev(Mean, Sd) UCL	16.1
97.5% Chebyshev(Mean, Sd) UCL	19.38	99% Chebyshev(Mean, Sd) UCL	25.81

Suggested UCL to Use
Data appear Normal, May want to try Normal Distribution

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

Note: For highly negatively-skewed data, confidence limits (e.g., Chen, Johnson, Lognormal, and Gamma) may not be reliable. Chen's and Johnson's methods provide adjustments for positvely skewed data sets.

95% Student's-t UCL	21.61	95% Adjusted-CLT UCL (Chen-1995)	19.92
		95% Modified-t UCL (Johnson-1978)	21.53

Nonparametric Distribution Free UCLs

95% CLT UCL	20.48	95% Jackknife UCL	21.61
95% Standard Bootstrap UCL	19.93	95% Bootstrap-t UCL	21.13
95% Hall's Bootstrap UCL	19.32	95% Percentile Bootstrap UCL	19.93
95% BCA Bootstrap UCL	19.93		
90% Chebyshev(Mean, Sd) UCL	24.64	95% Chebyshev(Mean, Sd) UCL	28.81
97.5% Chebyshev(Mean, Sd) UCL	34.59	99% Chebyshev(Mean, Sd) UCL	45.96

Suggested UCL to Use

Data appear Normal, May want to try Normal Distribution

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

Note: For highly negatively-skewed data, confidence limits (e.g., Chen, Johnson, Lognormal, and Gamma) may not be reliable. Chen's and Johnson's methods provide adjustments for positvely skewed data sets.

Suggested UCL to Use
Data appear Normal, May want to try Normal Distribution

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.

Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

Nonparametric UCL Statistics for Uncensored Full Data Sets

User Selected Options	
Date/Time of Computation	ProUCL 5.17/23/2021 2:10:34 PM
From File	Thompson A.xls
Full Precision	OFF
Confidence Coefficient	95%
Number of Bootstrap Operations	2000

COPPER

General Statistics

Total Number of Observations	6	Number of Distinct Observations	6
		Number of Missing Observations	0
Minimum	11.8	Mean	13.47
Maximum	14.7	Median	13.6
SD	1.227	Std. Error of Mean	0.501
Coefficient of Variation	0.0911	Skewness	-0.293
Mean of logged Data	2.597	SD of logged Data	0.0923

Note: Sample size is small (e.g., <10), if data are collected using ISM approach
you may want to use Chebyshev UCL to estimate EPC (ITRC, 2012).
Chebyshev UCL can be computed using the Nonparametric and All UCL Options.

Nonparametric Distribution Free UCL Statistics
Data appear Normal Distributed at 5% Significance Level

Assuming Normal Distribution

95% Normal UCL		95% UCLs (Adjusted for Skewness)	
95% Student's-t UCL	14.48	95% Adjusted-CLT UCL (Chen-1995)	14.23
		95% Modified-t UCL (Johnson-1978)	14.47

Nonparametric Distribution Free UCLs

95% CLT UCL	14.29	95% Jackknife UCL	14.48
95% Standard Bootstrap UCL	14.2	95% Bootstrap-t UCL	14.4
95% Hall's Bootstrap UCL	14	95% Percentile Bootstrap UCL	14.23
95% BCA Bootstrap UCL	14.22		
90% Chebyshev(Mean, Sd) UCL	14.97	95% Chebyshev(Mean, Sd) UCL	15.65
97.5% Chebyshev(Mean, Sd) UCL	16.6	99% Chebyshev(Mean, Sd) UCL	18.45

Suggested UCL to Use
Data appear Normal, May want to try Normal Distribution

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

Note: For highly negatively-skewed data, confidence limits (e.g., Chen, Johnson, Lognormal, and Gamma) may not be reliable. Chen's and Johnson's methods provide adjustments for positvely skewed data sets.

LEAD

General Statistics

Total Number of Observations	6	Number of Distinct Observations	6
		Number of Missing Observations	0
Minimum	12.2	Mean	20.05
Maximum	51.4	Median	13.8
SD	15.44	Std. Error of Mean	6.305
Coefficient of Variation	0.77	Skewness	2.39

Mean of logged Data	2.837	SD of logged Data	0.552

Note: Sample size is small (e.g., <10), if data are collected using ISM approach
you may want to use Chebyshev UCL to estimate EPC (ITRC, 2012).
Chebyshev UCL can be computed using the Nonparametric and All UCL Options.

Nonparametric Distribution Free UCL Statistics
Data do not follow a Discernible Distribution (0.05)

Assuming Normal Distribution

97.5% Chebyshev(Mean, Sd) UCL	11.16	99% Chebyshev(Mean, Sd) UCL	13.59

Suggested UCL to Use

Data appear Normal, May want to try Normal Distribution

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

Note: For highly negatively-skewed data, confidence limits (e.g., Chen, Johnson, Lognormal, and Gamma) may not be reliable. Chen's and Johnson's methods provide adjustments for positvely skewed data sets.

Note: Sample size is small (e.g., <10), if data are collected using ISM approach
you may want to use Chebyshev UCL to estimate EPC (ITRC, 2012).
Chebyshev UCL can be computed using the Nonparametric and All UCL Options.

Nonparametric Distribution Free UCL Statistics
Data appear Normal Distributed at 5% Significance Level

Assuming Normal Distribution

95% Normal UCL		**95% UCLs (Adjusted for Skewness)**	
95% Student's-t UCL	49.94	95% Adjusted-CLT UCL (Chen-1995)	46.76
		95% Modified-t UCL (Johnson-1978)	49.92

Nonparametric Distribution Free UCLs

95% CLT UCL	46.87	95% Jackknife UCL	49.94
95% Standard Bootstrap UCL	45.64	95% Bootstrap-t UCL	50.77
95% Hall's Bootstrap UCL	42.36	95% Percentile Bootstrap UCL	45.52
95% BCA Bootstrap UCL	45.2		
90% Chebyshev(Mean, Sd) UCL	58.09	95% Chebyshev(Mean, Sd) UCL	69.34
97.5% Chebyshev(Mean, Sd) UCL	84.96	99% Chebyshev(Mean, Sd) UCL	115.6

Suggested UCL to Use
Data appear Normal, May want to try Normal Distribution

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

Note: For highly negatively-skewed data, confidence limits (e.g., Chen, Johnson, Lognormal, and Gamma) may not be reliable. Chen's and Johnson's methods provide adjustments for positvely skewed data sets.

90% Chebyshev(Mean, Sd) UCL	101.1	95% Chebyshev(Mean, Sd) UCL	121
97.5% Chebyshev(Mean, Sd) UCL	148.6	99% Chebyshev(Mean, Sd) UCL	202.9

Suggested UCL to Use

Data appear Normal, May want to try Normal Distribution

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

Nonparametric UCL Statistics for Uncensored Full Data Sets

User Selected Options	
Date/Time of Computation	ProUCL 5.17/23/2021 2:13:11 PM

COPPER

General Statistics

Total Number of Observations	6	Number of Distinct Observations	6
		Number of Missing Observations	0
Minimum	12.4	Mean	14.75
Maximum	16.5	Median	15.15
SD	1.628	Std. Error of Mean	0.665
Coefficient of Variation	0.11	Skewness	-0.598
Mean of logged Data	2.686	SD of logged Data	0.114

Note: Sample size is small (e.g., <10), if data are collected using ISM approach
you may want to use Chebyshev UCL to estimate EPC (ITRC, 2012).
Chebyshev UCL can be computed using the Nonparametric and All UCL Options.

Nonparametric Distribution Free UCL Statistics
Data appear Normal Distributed at 5% Significance Level

Assuming Normal Distribution

95% Normal UCL		95% UCLs (Adjusted for Skewness)	
95% Student's-t UCL	16.09	95% Adjusted-CLT UCL (Chen-1995)	15.67
		95% Modified-t UCL (Johnson-1978)	16.06

Nonparametric Distribution Free UCLs

95% CLT UCL	15.84	95% Jackknife UCL	16.09
95% Standard Bootstrap UCL	15.75	95% Bootstrap-t UCL	15.82
95% Hall's Bootstrap UCL	15.51	95% Percentile Bootstrap UCL	15.73
95% BCA Bootstrap UCL	15.63		
90% Chebyshev(Mean, Sd) UCL	16.74	95% Chebyshev(Mean, Sd) UCL	17.65
97.5% Chebyshev(Mean, Sd) UCL	18.9	99% Chebyshev(Mean, Sd) UCL	21.36

Suggested UCL to Use
Data appear Normal, May want to try Normal Distribution

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

Note: For highly negatively-skewed data, confidence limits (e.g., Chen, Johnson, Lognormal, and Gamma) may not be reliable. Chen's and Johnson's methods provide adjustments for positvely skewed data sets.

Suggested UCL to Use

Data appear Normal, May want to try Normal Distribution

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

BENZ(A)ANTHRACENE

General Statistics

Total Number of Observations	6	Number of Distinct Observations	6
		Number of Missing Observations	0
Minimum	15.4	Mean	38.1
Maximum	59.8	Median	39.15
SD	20.3	Std. Error of Mean	8.288
Coefficient of Variation	0.533	Skewness	-0.0568
Mean of logged Data	3.499	SD of logged Data	0.605

Note: Sample size is small (e.g., <10), if data are collected using ISM approach
you may want to use Chebyshev UCL to estimate EPC (ITRC, 2012).
Chebyshev UCL can be computed using the Nonparametric and All UCL Options.

Nonparametric Distribution Free UCL Statistics
Data appear Normal Distributed at 5% Significance Level

Assuming Normal Distribution

95% Normal UCL		**95% UCLs (Adjusted for Skewness)**	
95% Student's-t UCL	54.8	95% Adjusted-CLT UCL (Chen-1995)	51.53
		95% Modified-t UCL (Johnson-1978)	54.77

Nonparametric Distribution Free UCLs

95% Normal UCL		**95% UCLs (Adjusted for Skewness)**	
95% Student's-t UCL	98.97	95% Adjusted-CLT UCL (Chen-1995)	93.14
		95% Modified-t UCL (Johnson-1978)	98.92

Nonparametric Distribution Free UCLs

95% CLT UCL	93.44	95% Jackknife UCL	98.97
95% Standard Bootstrap UCL	91.2	95% Bootstrap-t UCL	98.99
95% Hall's Bootstrap UCL	82.82	95% Percentile Bootstrap UCL	91.32
95% BCA Bootstrap UCL	91.32		
90% Chebyshev(Mean, Sd) UCL	113.7	95% Chebyshev(Mean, Sd) UCL	134
97.5% Chebyshev(Mean, Sd) UCL	162.2	99% Chebyshev(Mean, Sd) UCL	217.6

Suggested UCL to Use

Data appear Normal, May want to try Normal Distribution

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

Note: For highly negatively-skewed data, confidence limits (e.g., Chen, Johnson, Lognormal, and Gamma) may not be reliable. Chen's and Johnson's methods provide adjustments for positvely skewed data sets.

Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

Note: For highly negatively-skewed data, confidence limits (e.g., Chen, Johnson, Lognormal, and Gamma) may not be reliable. Chen's and Johnson's methods provide adjustments for positvely skewed data sets.

Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

Note: For highly negatively-skewed data, confidence limits (e.g., Chen, Johnson, Lognormal, and Gamma) may not be reliable. Chen's and Johnson's methods provide adjustments for positvely skewed data sets.

DIBENZ(A,H)ANTHRACENE

General Statistics

Total Number of Observations	6	Number of Distinct Observations	5
		Number of Missing Observations	0
Minimum	44.7	Mean	113.8
Maximum	167	Median	125.6

97.5% Chebyshev(Mean, Sd) UCL	11523	99% Chebyshev(Mean, Sd) UCL	14340

Suggested UCL to Use
Data appear Normal, May want to try Normal Distribution

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

Note: For highly negatively-skewed data, confidence limits (e.g., Chen, Johnson, Lognormal, and Gamma) may not be reliable. Chen's and Johnson's methods provide adjustments for positvely skewed data sets.

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).

However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

Note: For highly negatively-skewed data, confidence limits (e.g., Chen, Johnson, Lognormal, and Gamma) may not be reliable. Chen's and Johnson's methods provide adjustments for positvely skewed data sets.

Suggested UCL to Use
Data appear Normal, May want to try Normal Distribution

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

Note: For highly negatively-skewed data, confidence limits (e.g., Chen, Johnson, Lognormal, and Gamma) may not be reliable. Chen's and Johnson's methods provide adjustments for positvely skewed data sets.

95% Normal UCL		95% UCLs (Adjusted for Skewness)	
95% Student's-t UCL	14.25	95% Adjusted-CLT UCL (Chen-1995)	13.99
		95% Modified-t UCL (Johnson-1978)	14.25

Nonparametric Distribution Free UCLs

95% CLT UCL	13.97	95% Jackknife UCL	14.25
95% Standard Bootstrap UCL	N/A	95% Bootstrap-t UCL	N/A
95% Hall's Bootstrap UCL	N/A	95% Percentile Bootstrap UCL	N/A
95% BCA Bootstrap UCL	N/A		
90% Chebyshev(Mean, Sd) UCL	14.99	95% Chebyshev(Mean, Sd) UCL	16.01
97.5% Chebyshev(Mean, Sd) UCL	17.43	99% Chebyshev(Mean, Sd) UCL	20.21

Suggested UCL to Use

Data appear Normal, May want to try Normal Distribution

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

LEAD

General Statistics

Total Number of Observations	6	Number of Distinct Observations	6
		Number of Missing Observations	0
Minimum	22.7	Mean	75.83
Maximum	177	Median	64.75
SD	60.14	Std. Error of Mean	24.55
Coefficient of Variation	0.793	Skewness	0.989
Mean of logged Data	4.047	SD of logged Data	0.836

Note: Sample size is small (e.g., <10), if data are collected using ISM approach

you may want to use Chebyshev UCL to estimate EPC (ITRC, 2012).
Chebyshev UCL can be computed using the Nonparametric and All UCL Options.

Nonparametric Distribution Free UCL Statistics
Data appear Normal Distributed at 5% Significance Level

Assuming Normal Distribution

2-METHYLNAPHTHALENE

General Statistics

Total Number of Observations	6	Number of Distinct Observations	6
		Number of Missing Observations	0
Minimum	4.22	Mean	92.94
Maximum	127	Median	107.6
SD	45.13	Std. Error of Mean	18.42
Coefficient of Variation	0.486	Skewness	-2.064
Mean of logged Data	4.157	SD of logged Data	1.336

Note: Sample size is small (e.g., <10), if data are collected using ISM approach
you may want to use Chebyshev UCL to estimate EPC (ITRC, 2012).
Chebyshev UCL can be computed using the Nonparametric and All UCL Options.

Nonparametric Distribution Free UCL Statistics
Data do not follow a Discernible Distribution (0.05)

Assuming Normal Distribution

95% Normal UCL		**95% UCLs (Adjusted for Skewness)**	
95% Student's-t UCL	130.1	95% Adjusted-CLT UCL (Chen-1995)	106.7
		95% Modified-t UCL (Johnson-1978)	127.5

Nonparametric Distribution Free UCLs

95% CLT UCL	123.2	95% Jackknife UCL	130.1
95% Standard Bootstrap UCL	119.8	95% Bootstrap-t UCL	117.8
95% Hall's Bootstrap UCL	110.1	95% Percentile Bootstrap UCL	116.2
95% BCA Bootstrap UCL	112.2		
90% Chebyshev(Mean, Sd) UCL	148.2	95% Chebyshev(Mean, Sd) UCL	173.2
97.5% Chebyshev(Mean, Sd) UCL	208	99% Chebyshev(Mean, Sd) UCL	276.2

Suggested UCL to Use

95% Hall's Bootstrap UCL	110.1

In Case Bootstrap t and/or Hall's Bootstrap yields an unreasonably large UCL value, use 97.5% or 99% Chebyshev (Mean, Sd) UCL

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

Note: For highly negatively-skewed data, confidence limits (e.g., Chen, Johnson, Lognormal, and Gamma) may not be reliable. Chen's and Johnson's methods provide adjustments for positvely skewed data sets.

Suggested UCL to Use

Data appear Normal, May want to try Normal Distribution

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

Note: For highly negatively-skewed data, confidence limits (e.g., Chen, Johnson, Lognormal, and Gamma) may not be reliable. Chen's and Johnson's methods provide adjustments for positvely skewed data sets.

FLUORANTHENE

General Statistics

Total Number of Observations	6	Number of Distinct Observations	6
		Number of Missing Observations	0
Minimum	103	Mean	11857
Maximum	19900	Median	12350
SD	7382	Std. Error of Mean	3014
Coefficient of Variation	0.623	Skewness	-0.626
Mean of logged Data	8.691	SD of logged Data	2.018

Note: Sample size is small (e.g., <10), if data are collected using ISM approach you may want to use Chebyshev UCL to estimate EPC (ITRC, 2012). Chebyshev UCL can be computed using the Nonparametric and All UCL Options.

Mean of logged Data	7.561	SD of logged Data	0.502

Note: Sample size is small (e.g., <10), if data are collected using ISM approach
you may want to use Chebyshev UCL to estimate EPC (ITRC, 2012).
Chebyshev UCL can be computed using the Nonparametric and All UCL Options.

Nonparametric Distribution Free UCL Statistics
Data appear Normal Distributed at 5% Significance Level

Assuming Normal Distribution

95% Normal UCL		**95% UCLs (Adjusted for Skewness)**	
95% Student's-t UCL	2882	95% Adjusted-CLT UCL (Chen-1995)	2739
		95% Modified-t UCL (Johnson-1978)	2881

Nonparametric Distribution Free UCLs

95% CLT UCL	2741	95% Jackknife UCL	2882
95% Standard Bootstrap UCL	2692	95% Bootstrap-t UCL	2897
95% Hall's Bootstrap UCL	2731	95% Percentile Bootstrap UCL	2700
95% BCA Bootstrap UCL	2700		
90% Chebyshev(Mean, Sd) UCL	3256	95% Chebyshev(Mean, Sd) UCL	3773
97.5% Chebyshev(Mean, Sd) UCL	4490	99% Chebyshev(Mean, Sd) UCL	5899

Suggested UCL to Use
Data appear Normal, May want to try Normal Distribution

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

Note: For highly negatively-skewed data, confidence limits (e.g., Chen, Johnson, Lognormal, and Gamma) may not be reliable. Chen's and Johnson's methods provide adjustments for positvely skewed data sets.

97.5% Chebyshev(Mean, Sd) UCL	16.57	99% Chebyshev(Mean, Sd) UCL	19.45

Suggested UCL to Use

Data appear Normal, May want to try Normal Distribution

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

Note: For highly negatively-skewed data, confidence limits (e.g., Chen, Johnson, Lognormal, and Gamma) may not be reliable. Chen's and Johnson's methods provide adjustments for positvely skewed data sets.

Suggested UCL to Use

Data appear Normal, May want to try Normal Distribution

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

FLUORANTHENE

General Statistics

Total Number of Observations	6	Number of Distinct Observations	6
		Number of Missing Observations	0
Minimum	247	Mean	1267
Maximum	2200	Median	1363
SD	865.4	Std. Error of Mean	353.3
Coefficient of Variation	0.683	Skewness	-0.14
Mean of logged Data	6.853	SD of logged Data	0.924

Note: Sample size is small (e.g., <10), if data are collected using ISM approach
you may want to use Chebyshev UCL to estimate EPC (ITRC, 2012).
Chebyshev UCL can be computed using the Nonparametric and All UCL Options.

Nonparametric Distribution Free UCL Statistics
Data appear Normal Distributed at 5% Significance Level

Assuming Normal Distribution

95% Normal UCL		**95% UCLs (Adjusted for Skewness)**	
95% Student's-t UCL	1979	95% Adjusted-CLT UCL (Chen-1995)	1827
		95% Modified-t UCL (Johnson-1978)	1976

Nonparametric Distribution Free UCLs

95% CLT UCL	1848	95% Jackknife UCL	1979
95% Standard Bootstrap UCL	1797	95% Bootstrap-t UCL	1977
95% Hall's Bootstrap UCL	1633	95% Percentile Bootstrap UCL	1806
95% BCA Bootstrap UCL	1792		
90% Chebyshev(Mean, Sd) UCL	2327	95% Chebyshev(Mean, Sd) UCL	2807
97.5% Chebyshev(Mean, Sd) UCL	3474	99% Chebyshev(Mean, Sd) UCL	4783

Suggested UCL to Use
Data appear Normal, May want to try Normal Distribution

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

Note: For highly negatively-skewed data, confidence limits (e.g., Chen, Johnson, Lognormal, and Gamma) may not be reliable. Chen's and Johnson's methods provide adjustments for positvely skewed data sets.

FLUORENE

General Statistics

Total Number of Observations	6	Number of Distinct Observations	6
		Number of Missing Observations	0
Minimum	2.23	Mean	13.18
Maximum	20.1	Median	17.65
SD	8.336	Std. Error of Mean	3.403
Coefficient of Variation	0.632	Skewness	-0.914
Mean of logged Data	2.247	SD of logged Data	1.042

Note: Sample size is small (e.g., <10), if data are collected using ISM approach
you may want to use Chebyshev UCL to estimate EPC (ITRC, 2012).
Chebyshev UCL can be computed using the Nonparametric and All UCL Options.

Nonparametric Distribution Free UCL Statistics
Data do not follow a Discernible Distribution (0.05)

Assuming Normal Distribution

95% Normal UCL	**95% UCLs (Adjusted for Skewness)**

95% Student's-t UCL	20.04	95% Adjusted-CLT UCL (Chen-1995)	17.42
		95% Modified-t UCL (Johnson-1978)	19.83

Nonparametric Distribution Free UCLs

Assuming Normal Distribution

95% Normal UCL		95% UCLs (Adjusted for Skewness)	
95% Student's-t UCL	14.92	95% Adjusted-CLT UCL (Chen-1995)	14.71
		95% Modified-t UCL (Johnson-1978)	14.9

Nonparametric Distribution Free UCLs

95% CLT UCL	14.82	95% Jackknife UCL	14.92
95% Standard Bootstrap UCL	14.79	95% Bootstrap-t UCL	14.84
95% Hall's Bootstrap UCL	14.88	95% Percentile Bootstrap UCL	14.73
95% BCA Bootstrap UCL	14.72		
90% Chebyshev(Mean, Sd) UCL	15.45	95% Chebyshev(Mean, Sd) UCL	16.08
97.5% Chebyshev(Mean, Sd) UCL	16.95	99% Chebyshev(Mean, Sd) UCL	18.67

Suggested UCL to Use
Data appear Normal, May want to try Normal Distribution

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

Note: For highly negatively-skewed data, confidence limits (e.g., Chen, Johnson, Lognormal, and Gamma) may not be reliable. Chen's and Johnson's methods provide adjustments for positvely skewed data sets.

LEAD

General Statistics

Total Number of Observations	9	Number of Distinct Observations	9
		Number of Missing Observations	0
Minimum	9.14	Mean	11.05
Maximum	12.6	Median	11.1
SD	1.042	Std. Error of Mean	0.347
Coefficient of Variation	0.0943	Skewness	-0.25

Mean of logged Data	2.398	SD of logged Data	0.096

Note: Sample size is small (e.g., <10), if data are collected using ISM approach
you may want to use Chebyshev UCL to estimate EPC (ITRC, 2012).
Chebyshev UCL can be computed using the Nonparametric and All UCL Options.

Nonparametric Distribution Free UCL Statistics
Data appear Normal Distributed at 5% Significance Level

Assuming Normal Distribution

95% Normal UCL		**95% UCLs (Adjusted for Skewness)**	
95% Student's-t UCL	11.69	95% Adjusted-CLT UCL (Chen-1995)	11.59
		95% Modified-t UCL (Johnson-1978)	11.69

Nonparametric Distribution Free UCLs

95% CLT UCL	11.62	95% Jackknife UCL	11.69
95% Standard Bootstrap UCL	11.61	95% Bootstrap-t UCL	11.7
95% Hall's Bootstrap UCL	11.72	95% Percentile Bootstrap UCL	11.6
95% BCA Bootstrap UCL	11.58		
90% Chebyshev(Mean, Sd) UCL	12.09	95% Chebyshev(Mean, Sd) UCL	12.56
97.5% Chebyshev(Mean, Sd) UCL	13.22	99% Chebyshev(Mean, Sd) UCL	14.51

Suggested UCL to Use
Data appear Normal, May want to try Normal Distribution
