95% BCA Bootstrap UCL	0.518		
90% Chebyshev(Mean, Sd) UCL	0.528	95% Chebyshev(Mean, Sd) UCL	0.535
97.5% Chebyshev(Mean, Sd) UCL	0.545	99% Chebyshev(Mean, Sd) UCL	0.565

Suggested UCL to Use

Data appear Normal, May want to try Normal Distribution

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

Note: For highly negatively-skewed data, confidence limits (e.g., Chen, Johnson, Lognormal, and Gamma) may not be reliable. Chen's and Johnson's methods provide adjustments for positvely skewed data sets.

Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

Note: For highly negatively-skewed data, confidence limits (e.g., Chen, Johnson, Lognormal, and Gamma) may not be reliable. Chen's and Johnson's methods provide adjustments for positvely skewed data sets.

General Statistics

Total Number of Observations	9	Number of Distinct Observations	9
		Number of Missing Observations	0
Minimum	3.185	Mean	52.69
Maximum	160	Median	37.6
SD	51.57	Std. Error of Mean	17.19
Coefficient of Variation	0.979	Skewness	1.267
Mean of logged Data	3.363	SD of logged Data	1.358

Note: Sample size is small (e.g., <10), if data are collected using ISM approach
you may want to use Chebyshev UCL to estimate EPC (ITRC, 2012).
Chebyshev UCL can be computed using the Nonparametric and All UCL Options.

Nonparametric Distribution Free UCL Statistics

Data appear Normal Distributed at 5% Significance Level

Assuming Normal Distribution

95% Normal UCL		**95% UCLs (Adjusted for Skewness)**	
95% Student's-t UCL	84.65	95% Adjusted-CLT UCL (Chen-1995)	88.72
		95% Modified-t UCL (Johnson-1978)	85.86

Nonparametric Distribution Free UCLs

95% CLT UCL	80.96	95% Jackknife UCL	84.65
95% Standard Bootstrap UCL	79.17	95% Bootstrap-t UCL	104.9
95% Hall's Bootstrap UCL	122.9	95% Percentile Bootstrap UCL	79.81
95% BCA Bootstrap UCL	82.84		
90% Chebyshev(Mean, Sd) UCL	104.3	95% Chebyshev(Mean, Sd) UCL	127.6
97.5% Chebyshev(Mean, Sd) UCL	160	99% Chebyshev(Mean, Sd) UCL	223.7

Suggested UCL to Use

Data appear Normal, May want to try Normal Distribution

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

95% Standard Bootstrap UCL	21.75	95% Bootstrap-t UCL	97.74
95% Hall's Bootstrap UCL	102.6	95% Percentile Bootstrap UCL	24.69
95% BCA Bootstrap UCL	31.1		
90% Chebyshev(Mean, Sd) UCL	32.11	95% Chebyshev(Mean, Sd) UCL	41.58
97.5% Chebyshev(Mean, Sd) UCL	54.72	99% Chebyshev(Mean, Sd) UCL	80.52

Suggested UCL to Use

95% Hall's Bootstrap UCL 102.6

Recommended UCL exceeds the maximum observation

In Case Bootstrap t and/or Hall's Bootstrap yields an unreasonably large UCL value, use 97.5% or 99% Chebyshev (Mean, Sd) UCL

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

97.5% Chebyshev(Mean, Sd) UCL	0.54	99% Chebyshev(Mean, Sd) UCL	0.554

Suggested UCL to Use
Data appear Normal, May want to try Normal Distribution

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

Note: For highly negatively-skewed data, confidence limits (e.g., Chen, Johnson, Lognormal, and Gamma) may not be reliable. Chen's and Johnson's methods provide adjustments for positvely skewed data sets.

90% Chebyshev(Mean, Sd) UCL	7.174	95% Chebyshev(Mean, Sd) UCL	8.301
97.5% Chebyshev(Mean, Sd) UCL	9.864	99% Chebyshev(Mean, Sd) UCL	12.94

Suggested UCL to Use

Data appear Lognormal, May want to try Lognormal Distribution

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

PYRENE

General Statistics

Total Number of Observations	9	Number of Distinct Observations	9
		Number of Missing Observations	0

Minimum	3.045	Mean	7.551
Maximum	16.3	Median	3.3
SD	5.697	Std. Error of Mean	1.899
Coefficient of Variation	0.754	Skewness	0.736
Mean of logged Data	1.765	SD of logged Data	0.751

Note: Sample size is small (e.g., <10), if data are collected using ISM approach
you may want to use Chebyshev UCL to estimate EPC (ITRC, 2012).
Chebyshev UCL can be computed using the Nonparametric and All UCL Options.

Nonparametric Distribution Free UCL Statistics
Data do not follow a Discernible Distribution (0.05)

Assuming Normal Distribution

SD	11.3	Std. Error of Mean	3.768
Coefficient of Variation	1.178	Skewness	0.892
Mean of logged Data	1.56	SD of logged Data	1.232

Note: Sample size is small (e.g., <10), if data are collected using ISM approach
you may want to use Chebyshev UCL to estimate EPC (ITRC, 2012).
Chebyshev UCL can be computed using the Nonparametric and All UCL Options.

Nonparametric Distribution Free UCL Statistics
Data do not follow a Discernible Distribution (0.05)

Assuming Normal Distribution

95% Normal UCL		**95% UCLs (Adjusted for Skewness)**	
95% Student's-t UCL	16.61	95% Adjusted-CLT UCL (Chen-1995)	16.99
		95% Modified-t UCL (Johnson-1978)	16.79

Nonparametric Distribution Free UCLs

95% CLT UCL	15.8	95% Jackknife UCL	16.61
95% Standard Bootstrap UCL	15.4	95% Bootstrap-t UCL	18.47
95% Hall's Bootstrap UCL	13.23	95% Percentile Bootstrap UCL	15.19
95% BCA Bootstrap UCL	16.77		
90% Chebyshev(Mean, Sd) UCL	20.9	95% Chebyshev(Mean, Sd) UCL	26.02
97.5% Chebyshev(Mean, Sd) UCL	33.13	99% Chebyshev(Mean, Sd) UCL	47.09

Suggested UCL to Use

95% Hall's Bootstrap UCL	13.23

In Case Bootstrap t and/or Hall's Bootstrap yields an unreasonably large UCL value, use 97.5% or 99% Chebyshev (Mean, Sd) UCL

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

95% Student's-t UCL	23.3	95% Adjusted-CLT UCL (Chen-1995)	27.74
		95% Modified-t UCL (Johnson-1978)	24.19

Nonparametric Distribution Free UCLs

95% CLT UCL	21.98	95% Jackknife UCL	23.3
95% Standard Bootstrap UCL	21.28	95% Bootstrap-t UCL	73.23
95% Hall's Bootstrap UCL	78.4	95% Percentile Bootstrap UCL	23.47
95% BCA Bootstrap UCL	28.29		
90% Chebyshev(Mean, Sd) UCL	30.3	95% Chebyshev(Mean, Sd) UCL	38.64
97.5% Chebyshev(Mean, Sd) UCL	50.22	99% Chebyshev(Mean, Sd) UCL	72.96

Suggested UCL to Use

95% Hall's Bootstrap UCL 78.4

Recommended UCL exceeds the maximum observation

In Case Bootstrap t and/or Hall's Bootstrap yields an unreasonably large UCL value, use 97.5% or 99% Chebyshev (Mean, Sd) UCL

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

PYRENE

General Statistics

Total Number of Observations	9	Number of Distinct Observations	9
		Number of Missing Observations	0
Minimum	3.075	Mean	22.51
Maximum	80.8	Median	10.5
SD	27.52	Std. Error of Mean	9.172
Coefficient of Variation	1.222	Skewness	1.513
Mean of logged Data	2.424	SD of logged Data	1.257

Note: Sample size is small (e.g., <10), if data are collected using ISM approach
you may want to use Chebyshev UCL to estimate EPC (ITRC, 2012).
Chebyshev UCL can be computed using the Nonparametric and All UCL Options.

Nonparametric Distribution Free UCL Statistics
Data appear Gamma Distributed at 5% Significance Level

Assuming Normal Distribution

95% Normal UCL		**95% UCLs (Adjusted for Skewness)**

Total Number of Observations	9	Number of Distinct Observations	9
		Number of Missing Observations	0
Minimum	2.12	Mean	41.29
Maximum	260	Median	12.6
SD	82.81	Std. Error of Mean	27.6
Coefficient of Variation	2.005	Skewness	2.891
Mean of logged Data	2.549	SD of logged Data	1.541

Note: Sample size is small (e.g., <10), if data are collected using ISM approach
you may want to use Chebyshev UCL to estimate EPC (ITRC, 2012).
Chebyshev UCL can be computed using the Nonparametric and All UCL Options.

Nonparametric Distribution Free UCL Statistics

Data appear Gamma Distributed at 5% Significance Level

Assuming Normal Distribution

95% Normal UCL		95% UCLs (Adjusted for Skewness)	
95% Student's-t UCL	92.63	95% Adjusted-CLT UCL (Chen-1995)	115.1
		95% Modified-t UCL (Johnson-1978)	97.06

Nonparametric Distribution Free UCLs

95% CLT UCL	86.7	95% Jackknife UCL	92.63
95% Standard Bootstrap UCL	84.29	95% Bootstrap-t UCL	324.3
95% Hall's Bootstrap UCL	281.4	95% Percentile Bootstrap UCL	94.6
95% BCA Bootstrap UCL	120.7		
90% Chebyshev(Mean, Sd) UCL	124.1	95% Chebyshev(Mean, Sd) UCL	161.6
97.5% Chebyshev(Mean, Sd) UCL	213.7	99% Chebyshev(Mean, Sd) UCL	316

Suggested UCL to Use

Data appear Gamma, May want to try Gamma Distribution

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

97.5% Chebyshev(Mean, Sd) UCL	7.801	99% Chebyshev(Mean, Sd) UCL	10.22

Suggested UCL to Use
Data appear Normal, May want to try Normal Distribution

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).

However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

DIBENZ(A,H)ANTHRACENE

General Statistics

Total Number of Observations	9	Number of Distinct Observations	8
		Number of Missing Observations	0
Minimum	2.92	Mean	3.216
Maximum	3.33	Median	3.28
SD	0.142	Std. Error of Mean	0.0472
Coefficient of Variation	0.044	Skewness	-1.52
Mean of logged Data	1.167	SD of logged Data	0.0453

Note: Sample size is small (e.g., <10), if data are collected using ISM approach
you may want to use Chebyshev UCL to estimate EPC (ITRC, 2012).
Chebyshev UCL can be computed using the Nonparametric and All UCL Options.

Nonparametric Distribution Free UCL Statistics
Data do not follow a Discernible Distribution (0.05)

Assuming Normal Distribution

95% Normal UCL		**95% UCLs (Adjusted for Skewness)**	
95% Student's-t UCL	3.304	95% Adjusted-CLT UCL (Chen-1995)	3.268
		95% Modified-t UCL (Johnson-1978)	3.3

Nonparametric Distribution Free UCLs

95% CLT UCL	3.294	95% Jackknife UCL	3.304
95% Standard Bootstrap UCL	3.289	95% Bootstrap-t UCL	3.281
95% Hall's Bootstrap UCL	3.271	95% Percentile Bootstrap UCL	3.286
95% BCA Bootstrap UCL	3.276		
90% Chebyshev(Mean, Sd) UCL	3.358	95% Chebyshev(Mean, Sd) UCL	3.422
97.5% Chebyshev(Mean, Sd) UCL	3.511	99% Chebyshev(Mean, Sd) UCL	3.686

Suggested UCL to Use

95% Student's-t UCL	3.304	or 95% Modified-t UCL	3.3

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

Note: For highly negatively-skewed data, confidence limits (e.g., Chen, Johnson, Lognormal, and Gamma) may not be
reliable. Chen's and Johnson's methods provide adjustments for positvely skewed data sets.

97.5% Chebyshev(Mean, Sd) UCL	15.07	99% Chebyshev(Mean, Sd) UCL	16.64

Suggested UCL to Use
Data appear Normal, May want to try Normal Distribution

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

Note: For highly negatively-skewed data, confidence limits (e.g., Chen, Johnson, Lognormal, and Gamma) may not be reliable. Chen's and Johnson's methods provide adjustments for positvely skewed data sets.

90% Chebyshev(Mean, Sd) UCL	54.06	95% Chebyshev(Mean, Sd) UCL	59.16
97.5% Chebyshev(Mean, Sd) UCL	66.23	99% Chebyshev(Mean, Sd) UCL	80.14

Suggested UCL to Use
Data appear Normal, May want to try Normal Distribution

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

Note: For highly negatively-skewed data, confidence limits (e.g., Chen, Johnson, Lognormal, and Gamma) may not be reliable. Chen's and Johnson's methods provide adjustments for positvely skewed data sets.

SD	0.581	Std. Error of Mean	0.194
Coefficient of Variation	0.0467	Skewness	-1.626

Mean of logged Data	2.519	SD of logged Data	0.0483

Note: Sample size is small (e.g., <10), if data are collected using ISM approach
you may want to use Chebyshev UCL to estimate EPC (ITRC, 2012).
Chebyshev UCL can be computed using the Nonparametric and All UCL Options.

Nonparametric Distribution Free UCL Statistics
Data appear Normal Distributed at 5% Significance Level

Assuming Normal Distribution

95% Normal UCL		**95% UCLs (Adjusted for Skewness)**	
95% Student's-t UCL	12.79	95% Adjusted-CLT UCL (Chen-1995)	12.64
		95% Modified-t UCL (Johnson-1978)	12.78

Nonparametric Distribution Free UCLs

95% CLT UCL	12.75	95% Jackknife UCL	12.79
95% Standard Bootstrap UCL	12.74	95% Bootstrap-t UCL	12.7
95% Hall's Bootstrap UCL	12.67	95% Percentile Bootstrap UCL	12.7
95% BCA Bootstrap UCL	12.64		
90% Chebyshev(Mean, Sd) UCL	13.01	95% Chebyshev(Mean, Sd) UCL	13.28
97.5% Chebyshev(Mean, Sd) UCL	13.64	99% Chebyshev(Mean, Sd) UCL	14.36

Suggested UCL to Use
Data appear Normal, May want to try Normal Distribution

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

Note: For highly negatively-skewed data, confidence limits (e.g., Chen, Johnson, Lognormal, and Gamma) may not be reliable. Chen's and Johnson's methods provide adjustments for positvely skewed data sets.

Suggested UCL to Use
Data appear Approximate Gamma, May want to try Gamma Distribution

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

FLUORENE

General Statistics

Total Number of Observations	9	Number of Distinct Observations	9
		Number of Missing Observations	0
Minimum	0.934	Mean	1.211
Maximum	1.32	Median	1.285
SD	0.14	Std. Error of Mean	0.0468
Coefficient of Variation	0.116	Skewness	-1.402
Mean of logged Data	0.185	SD of logged Data	0.125

Note: Sample size is small (e.g., <10), If data are collected using ISM approach
you may want to use Chebyshev UCL to estimate EPC (ITRC, 2012).
Chebyshev UCL can be computed using the Nonparametric and All UCL Options.

Nonparametric Distribution Free UCL Statistics
Data appear Approximate Normal Distributed at 5% Significance Level

Assuming Normal Distribution

95% Normal UCL		**95% UCLs (Adjusted for Skewness)**	
95% Student's-t UCL	1.298	95% Adjusted-CLT UCL (Chen-1995)	1.265
		95% Modified-t UCL (Johnson-1978)	1.294

Nonparametric Distribution Free UCLs

95% CLT UCL	1.288	95% Jackknife UCL	1.298
95% Standard Bootstrap UCL	1.282	95% Bootstrap-t UCL	1.282

Note: Sample size is small (e.g., <10), if data are collected using ISM approach

you may want to use Chebyshev UCL to estimate EPC (ITRC, 2012).
Chebyshev UCL can be computed using the Nonparametric and All UCL Options.

Nonparametric Distribution Free UCL Statistics
Data appear Normal Distributed at 5% Significance Level

Assuming Normal Distribution

95% Normal UCL		**95% UCLs (Adjusted for Skewness)**	
95% Student's-t UCL	15.52	95% Adjusted-CLT UCL (Chen-1995)	15.3
		95% Modified-t UCL (Johnson-1978)	15.52

Nonparametric Distribution Free UCLs

95% CLT UCL	15.31	95% Jackknife UCL	15.52
95% Standard Bootstrap UCL	15.19	95% Bootstrap-t UCL	15.46
95% Hall's Bootstrap UCL	15.02	95% Percentile Bootstrap UCL	15.19
95% BCA Bootstrap UCL	15.24		
90% Chebyshev(Mean, Sd) UCL	16.69	95% Chebyshev(Mean, Sd) UCL	18.07
97.5% Chebyshev(Mean, Sd) UCL	19.99	99% Chebyshev(Mean, Sd) UCL	23.77

Suggested UCL to Use
Data appear Normal, May want to try Normal Distribution

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

Note: For highly negatively-skewed data, confidence limits (e.g., Chen, Johnson, Lognormal, and Gamma) may not be reliable. Chen's and Johnson's methods provide adjustments for positvely skewed data sets.

SD	0.0243	Std. Error of Mean	0.00808
Coefficient of Variation	0.0188	Skewness	-0.366
Mean of logged Data	0.256	SD of logged Data	0.0188

Note: Sample size is small (e.g., <10), if data are collected using ISM approach
you may want to use Chebyshev UCL to estimate EPC (ITRC, 2012).
Chebyshev UCL can be computed using the Nonparametric and All UCL Options.

Nonparametric Distribution Free UCL Statistics

Data appear Normal Distributed at 5% Significance Level

Assuming Normal Distribution

95% Normal UCL		**95% UCLs (Adjusted for Skewness)**	
95% Student's-t UCL	1.307	95% Adjusted-CLT UCL (Chen-1995)	1.304
		95% Modified-t UCL (Johnson-1978)	1.307

Nonparametric Distribution Free UCLs

95% CLT UCL	1.306	95% Jackknife UCL	1.307
95% Standard Bootstrap UCL	1.305	95% Bootstrap-t UCL	1.306
95% Hall's Bootstrap UCL	1.303	95% Percentile Bootstrap UCL	1.304
95% BCA Bootstrap UCL	1.303		
90% Chebyshev(Mean, Sd) UCL	1.316	95% Chebyshev(Mean, Sd) UCL	1.327
97.5% Chebyshev(Mean, Sd) UCL	1.343	99% Chebyshev(Mean, Sd) UCL	1.373

Suggested UCL to Use

Data appear Normal, May want to try Normal Distribution

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

Note: For highly negatively-skewed data, confidence limits (e.g., Chen, Johnson, Lognormal, and Gamma) may not be reliable. Chen's and Johnson's methods provide adjustments for positvely skewed data sets.

Total Number of Observations	9	Number of Distinct Observations	8
		Number of Missing Observations	0
Minimum	45.3	Mean	48.86
Maximum	52	Median	48
SD	2.257	Std. Error of Mean	0.752
Coefficient of Variation	0.0462	Skewness	-0.0105
Mean of logged Data	3.888	SD of logged Data	0.0463

Note: Sample size is small (e.g., <10), if data are collected using ISM approach
you may want to use Chebyshev UCL to estimate EPC (ITRC, 2012).
Chebyshev UCL can be computed using the Nonparametric and All UCL Options.

Nonparametric Distribution Free UCL Statistics
Data appear Normal Distributed at 5% Significance Level

Assuming Normal Distribution

95% Normal UCL		**95% UCLs (Adjusted for Skewness)**	
95% Student's-t UCL	50.25	95% Adjusted-CLT UCL (Chen-1995)	50.09
		95% Modified-t UCL (Johnson-1978)	50.25

Nonparametric Distribution Free UCLs

95% CLT UCL	50.09	95% Jackknife UCL	50.25
95% Standard Bootstrap UCL	50.02	95% Bootstrap-t UCL	50.34
95% Hall's Bootstrap UCL	50.04	95% Percentile Bootstrap UCL	49.99
95% BCA Bootstrap UCL	50.06		
90% Chebyshev(Mean, Sd) UCL	51.11	95% Chebyshev(Mean, Sd) UCL	52.13
97.5% Chebyshev(Mean, Sd) UCL	53.55	99% Chebyshev(Mean, Sd) UCL	56.34

Suggested UCL to Use

Data appear Normal, May want to try Normal Distribution

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

Note: For highly negatively-skewed data, confidence limits (e.g., Chen, Johnson, Lognormal, and Gamma) may not be reliable. Chen's and Johnson's methods provide adjustments for positvely skewed data sets.

95% BCA Bootstrap UCL	1.307		
90% Chebyshev(Mean, Sd) UCL	1.324	95% Chebyshev(Mean, Sd) UCL	1.337
97.5% Chebyshev(Mean, Sd) UCL	1.355	99% Chebyshev(Mean, Sd) UCL	1.391

Suggested UCL to Use

95% Student's-t UCL	1.313	or 95% Modified-t UCL	1.312

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

Note: For highly negatively-skewed data, confidence limits (e.g., Chen, Johnson, Lognormal, and Gamma) may not be reliable. Chen's and Johnson's methods provide adjustments for positvely skewed data sets.

		Number of Missing Observations	0
Minimum	48.7	Mean	51.03
Maximum	55.8	Median	50.8
SD	2.087	Std. Error of Mean	0.696
Coefficient of Variation	0.0409	Skewness	1.604
Mean of logged Data	3.932	SD of logged Data	0.0399

Note: Sample size is small (e.g., <10), if data are collected using ISM approach
you may want to use Chebyshev UCL to estimate EPC (ITRC, 2012).
Chebyshev UCL can be computed using the Nonparametric and All UCL Options.

Nonparametric Distribution Free UCL Statistics
Data appear Normal Distributed at 5% Significance Level

Assuming Normal Distribution

95% Normal UCL		**95% UCLs (Adjusted for Skewness)**	
95% Student's-t UCL	52.33	95% Adjusted-CLT UCL (Chen-1995)	52.58
		95% Modified-t UCL (Johnson-1978)	52.39

Nonparametric Distribution Free UCLs

95% CLT UCL	52.18	95% Jackknife UCL	52.33
95% Standard Bootstrap UCL	52.09	95% Bootstrap-t UCL	53.03
95% Hall's Bootstrap UCL	57.76	95% Percentile Bootstrap UCL	52.23
95% BCA Bootstrap UCL	52.57		
90% Chebyshev(Mean, Sd) UCL	53.12	95% Chebyshev(Mean, Sd) UCL	54.07
97.5% Chebyshev(Mean, Sd) UCL	55.38	99% Chebyshev(Mean, Sd) UCL	57.96

Suggested UCL to Use

Data appear Normal, May want to try Normal Distribution

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

Suggested UCL to Use

Data appear Normal, May want to try Normal Distribution

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

BENZO(G,H,I)PERYLENE

General Statistics

Total Number of Observations	9	Number of Distinct Observations	9
		Number of Missing Observations	0
Minimum	2.88	Mean	23.23
Maximum	51.2	Median	16
SD	20.62	Std. Error of Mean	6.875
Coefficient of Variation	0.888	Skewness	0.5
Mean of logged Data	2.609	SD of logged Data	1.235

Note: Sample size is small (e.g., <10), if data are collected using ISM approach
you may want to use Chebyshev UCL to estimate EPC (ITRC, 2012).
Chebyshev UCL can be computed using the Nonparametric and All UCL Options.

Nonparametric Distribution Free UCL Statistics

95% BCA Bootstrap UCL	45.06		
90% Chebyshev(Mean, Sd) UCL	45.84	95% Chebyshev(Mean, Sd) UCL	46.5
97.5% Chebyshev(Mean, Sd) UCL	47.42	99% Chebyshev(Mean, Sd) UCL	49.22

Suggested UCL to Use

Data appear Normal, May want to try Normal Distribution

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

Note: For highly negatively-skewed data, confidence limits (e.g., Chen, Johnson, Lognormal, and Gamma) may not be reliable. Chen's and Johnson's methods provide adjustments for positvely skewed data sets.

2-METHYLNAPHTHALENE

General Statistics

Total Number of Observations	9	Number of Distinct Observations	6
		Number of Missing Observations	0
Minimum	0.985	Mean	6.936
Maximum	9.95	Median	9.9
SD	4.459	Std. Error of Mean	1.486
Coefficient of Variation	0.643	Skewness	-0.857
Mean of logged Data	1.526	SD of logged Data	1.152

Note: Sample size is small (e.g., <10), if data are collected using ISM approach you may want to use Chebyshev UCL to estimate EPC (ITRC, 2012). Chebyshev UCL can be computed using the Nonparametric and All UCL Options.

Nonparametric Distribution Free UCL Statistics

Data do not follow a Discernible Distribution (0.05)

Assuming Normal Distribution

95% Normal UCL		**95% UCLs (Adjusted for Skewness)**	
95% Student's-t UCL	9.7	95% Adjusted-CLT UCL (Chen-1995)	8.927
		95% Modified-t UCL (Johnson-1978)	9.629

Nonparametric Distribution Free UCLs

Assuming Normal Distribution

95% Normal UCL		**95% UCLs (Adjusted for Skewness)**	
95% Student's-t UCL	18.98	95% Adjusted-CLT UCL (Chen-1995)	18.09
		95% Modified-t UCL (Johnson-1978)	18.94

Nonparametric Distribution Free UCLs

95% CLT UCL	18.4	95% Jackknife UCL	18.98
95% Standard Bootstrap UCL	18.16	95% Bootstrap-t UCL	18.79
95% Hall's Bootstrap UCL	17.46	95% Percentile Bootstrap UCL	18.03
95% BCA Bootstrap UCL	17.96		
90% Chebyshev(Mean, Sd) UCL	22.1	95% Chebyshev(Mean, Sd) UCL	25.81

97.5% Chebyshev(Mean, Sd) UCL	30.97	99% Chebyshev(Mean, Sd) UCL	41.09

Suggested UCL to Use

Data appear Normal, May want to try Normal Distribution

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

Note: For highly negatively-skewed data, confidence limits (e.g., Chen, Johnson, Lognormal, and Gamma) may not be reliable. Chen's and Johnson's methods provide adjustments for positvely skewed data sets.

PHENANTHRENE

General Statistics

Total Number of Observations	9	Number of Distinct Observations	9
		Number of Missing Observations	0
Minimum	13	Mean	231
Maximum	499	Median	171
SD	203	Std. Error of Mean	67.68
Coefficient of Variation	0.879	Skewness	0.182
Mean of logged Data	4.706	SD of logged Data	1.576

Note: Sample size is small (e.g., <10), if data are collected using ISM approach you may want to use Chebyshev UCL to estimate EPC (ITRC, 2012). Chebyshev UCL can be computed using the Nonparametric and All UCL Options.

95% Normal UCL		**95% UCLs (Adjusted for Skewness)**	
95% Student's-t UCL	565.7	95% Adjusted-CLT UCL (Chen-1995)	579.8

		95% Modified-t UCL (Johnson-1978)	571.8

Nonparametric Distribution Free UCLs

95% CLT UCL	540.8	95% Jackknife UCL	565.7
95% Standard Bootstrap UCL	534.1	95% Bootstrap-t UCL	644.4
95% Hall's Bootstrap UCL	692	95% Percentile Bootstrap UCL	542.4
95% BCA Bootstrap UCL	562.1		
90% Chebyshev(Mean, Sd) UCL	698.1	95% Chebyshev(Mean, Sd) UCL	855.8
97.5% Chebyshev(Mean, Sd) UCL	1075	99% Chebyshev(Mean, Sd) UCL	1505

Suggested UCL to Use

Data appear Normal, May want to try Normal Distribution

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

CHRYSENE

General Statistics

Total Number of Observations	9	Number of Distinct Observations	9
		Number of Missing Observations	0
Minimum	4.52	Mean	722.3
Maximum	2190	Median	672
SD	730.7	Std. Error of Mean	243.6
Coefficient of Variation	1.012	Skewness	0.97
Mean of logged Data	5.249	SD of logged Data	2.464

Note: Sample size is small (e.g., <10), if data are collected using ISM approach
you may want to use Chebyshev UCL to estimate EPC (ITRC, 2012).
Chebyshev UCL can be computed using the Nonparametric and All UCL Options.

90% Chebyshev(Mean, Sd) UCL	2345	95% Chebyshev(Mean, Sd) UCL	2850
97.5% Chebyshev(Mean, Sd) UCL	3551	99% Chebyshev(Mean, Sd) UCL	4929

Suggested UCL to Use

Data appear Normal, May want to try Normal Distribution

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

PYRENE

General Statistics

Total Number of Observations	9	Number of Distinct Observations	9
		Number of Missing Observations	0
Minimum	22.3	Mean	2596
Maximum	5860	Median	2610
SD	2259	Std. Error of Mean	752.9

Coefficient of Variation	0.87	Skewness	0.185
Mean of logged Data	6.642	SD of logged Data	2.368

Note: Sample size is small (e.g., <10), if data are collected using ISM approach
you may want to use Chebyshev UCL to estimate EPC (ITRC, 2012).
Chebyshev UCL can be computed using the Nonparametric and All UCL Options.

Nonparametric Distribution Free UCL Statistics
Data appear Normal Distributed at 5% Significance Level

Assuming Normal Distribution

B1.0 INTRODUCTION

This appendix describes the quality and usability of analytical data collected for the remedial investigation (RI) activities conducted at the Former Skeet Range Munitions Response Site 03 (MRS03[1]), Kingman Ground-to-Ground (GTG) Gunnery Range, (the MRS03 Site) in Kingman, Mohave County, Arizona. Data were collected during RI Addendum soil sampling using the incremental sampling method (ISM) at each parcel [identified by its unique assessor parcel number (APN)]. Soil sampling activities were conducted from January 21, 2020 through April 8, 2021 and followed the procedures specified in the *Final Remedial Investigation (RI) and Feasibility Study (FS) Work Plan, Formerly Used Defense Site, Military Munitions Response Program, MRS03-15 Skeet Ranges, Former Kingman Ground-to-Ground (GTG) Gunnery Range, Kingman, Mohave County, Arizona, Formerly Used Defense Site Property No. J09AZ041201* (Eco, 2014) (project Work Plan), as amended by the *Final Uniform Federal Policy Quality Assurance Project Plan Addendum No. 1 Remedial Investigation of Former Skeet Range MRS03, Kingman Ground-To-Ground Gunnery Range, Mohave County, Arizona* (NOREAS, 2018) (project Quality Assurance Project Plan [QAPP]).

The data quality evaluation was determined based on verification of field and laboratory quality assurance (QA)/quality control (QC) samples collected and analyzed during this project. QA/QC for field activities was ensured through rigorous documentation, equipment calibration (where applicable), and the collection of field QC samples. Additionally, QC analyses were performed by the analytical laboratory to determine analytical precision and accuracy of the analyses determined by laboratory control samples (LCSs), matrix spike and matrix spike duplicate (MS/MSD) samples, matrix duplicates, and surrogate spikes. In addition, results from method (laboratory) blanks were evaluated to assess the possibility of contamination of environmental samples that may have been introduced during sampling and laboratory activities. All analyses were performed in accordance with the Final QAPP (NOREAS, 2018) and the Department of Defense (DoD) Quality System Manual (QSM) version 5.1 (DoD, 2017) requirements. For this project, polycyclic aromatic hydrocarbons (PAHs) and metals: antimony, copper, lead, and zinc are considered the contaminants of potential concern (COPCs). COPCs were reported in mg/kg for metals and in microgram per kilogram (µg/kg) for PAHs.

All soil investigational samples collected during this project were submitted under documented chain-of-custody (CoC) procedures to Eurofins TestAmerica's Irvine, California facility. The Irvine facility repackaged samples for shipping to the Eurofins TestAmerica in Arvada, Colorado (Eurofins TestAmerica-Denver) facility, which maintains current Department of Defense (DoD) Environmental Laboratory Accreditation Program (ELAP) accreditations.

1

Environmental samples were processed using the ISM procedure and analyzed for PAHs by United States Environmental Protection Agency (USEPA) Method 8270C selected ion mode (SIM), and for the metals: antimony, copper, lead, and zinc by USEPA Method 6010B. Soil samples received at the laboratory were dried, mechanically ground, and incrementally sampled followed by digestion according to laboratory SOPs and analytical method. The soil samples for PAHs were processed through the same ISM procedure except for the grinding step as documented in the Field Change Request Form (FCRF)-001 (NOREAS, 2019a). Following ISM, samples were extracted and analyzed according to EPA method 8270C using gas chromatography/mass spectrometer (GC/MS) in SIM mode.

A third-party validation firm, Synectics in Sacramento, California, performed data validation on the chemical analyses for the project samples, as discussed in Section C5.0.

The chain-of-custody records, laboratory analytical results, and data validation reports are provided in Attachment 1 of the RI Addendum Report as a part of the parcel reports.

B2.0 FIELD DOCUMENTATION

A number of QA/QC measures were employed in the field to ensure that the environmental samples collected were representative of site conditions at the time of sampling. Field equipment was documented in a field notebook and field forms. Field documentation protocols included use of a field notebook, APN (parcel) field log form, photographic documentation of field sampling, global positioning system (GPS) coordinates of the parcel and sampling locations and CoC forms. The GPS survey data, field logs, and photographic logs for each parcel are presented as a part of the respective parcel report in Attachment 1, in the RI Addendum Report.

This page is intentionally left blank.

B3.0 FIELD QUALITY CONTROL SAMPLES

In addition to the soil samples, field QC samples were collected and analyzed as specified in the Work Plan (Eco, 2014) and Final QAPP Addendum (NOREAS, 2018). During the RI Addendum, 118 equipment blanks were collected and analyzed. In addition, MS/MSDs were also collected and analyzed at a rate of 1 per 20 field samples as specified in the Final QAPP Addendum (NOREAS, 2018). To ensure data comparability, ISM sampling procedures of soil samples were followed using guidelines from the United States Army Corp of Engineer (USACE) guidelines (USACE, 2009) and the Interstate Technology & Regulatory Council (ITRC) guidance (ITRC, 2012), and analytical processes followed standardized protocols and published EPA analytical methods identical to the original field samples.

B3.1 Equipment (Rinsate) Blanks

During the January 2020 to April 2021 RI field sampling events, 118 field quality control equipment blank (EB) samples were collected and analyzed to evaluate the possibility of cross-contamination resulting from sampling equipment and activities. In accordance with the Final QAPP Addendum (NOREAS, 2018), an equipment rinsate was collected at the completion of each parcel sampled by washing the laboratory-provided rinse water over the cleaned hand auger bucket into the sample containers. Equipment blanks were submitted for analysis for PAHs by EPA Method 8270C SIM, and for the metals: antimony, copper, lead and zinc by EPA Method 6010B. In summary, data validation reported the following:

- Trace concentration of lead was detected in two EB samples. Zinc was detected at very low concentrations in five of the EB samples.
- Trace concentrations of select PAHs (e.g., 2-methylnaphthalene, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, chrysene, fluoranthene, naphthalene, phenanthrene, and pyrene) were detected in five EB samples.
- Surrogate spike recovery exceeded project acceptance limits for PAHs in 17 EB samples.
- LCS recoveries and relative percent difference (RPD) values for select PAHs were outside project limits in eight EB samples.
- Holding time was outside prep hold time for five EB.
- Receipt temperature was outside limits for one EB.

Background detections in EB samples were primarily due to laboratory contamination as indicated by method blank data rather than field operations. Concentrations of these detected analytes in the associated samples were adjusted to “estimated,” “non-detected estimated,” or “non-detect”, as appropriate.

A detailed discussion of the validation qualification of EB samples is presented in Section C4.0. Relevant data validation qualifiers (i.e., “J”; “UJ”; “U”; “R”) are defined in Section C5.0 and data validation reports provided in Attachment 1 as a part of the parcel reports. A summary of the validation of equipment blanks collected by sample ID and associated parcel APN, analyte contaminants, limits of quantitation (LOQs), analytical results and qualified final results is provided in Table C-1.

B3.2 Field Duplicates/Triplicates

The purpose of field duplicate samples is to evaluate the precision of the overall sample collection and analysis processes by calculating the RPD for duplicate sample concentration. A field duplicate consists of two co-located samples of the same matrix collected at the same time and location, to the extent possible, using the same sampling techniques.

In accordance with the Final QAPP Addendum field duplicates were not collected as triplicate ISM samples were collected at each Decision Unit (DU)/parcel sampling grid. Soil samples were collected from each DU as 3 replicates to represent the surface soils (0- to 2-inches), and as 3 replicates for the subsurface soils [0- to 1 foot below ground surface (bgs); 1- to 2 feet bgs, and if required, 2- to 3 feet bgs, 3- to 4-feet bgs, 4- to 5-feet bgs, and 5- to 6-feet bgs]. The sampling process was repeated for the two subsequent replicate samples used the same sampling techniques, and collected at the same time and location.

B3.3 Matrix Spike and Matrix Spike Duplicate Samples

MS/MSD samples are prepared for chemical analysis by spiking the sample with a known amount of a target analyte. Following spike addition, the sample is carried through the complete sample preparation process along with the other samples in the batch. The percent recoveries (%Rs) for the MS/MSD samples are compared against each other and against the known amount of the spike to determine the accuracy (bias) of the analytical process. RPD from the MS/MSD samples is also calculated to evaluate the precision of the analytical process. For this project, one MS/MSD sample was collected for approximately every 20 soil samples. A detailed evaluation is presented in Section C4.0.

B4.0 LABORATORY QUALITY CONTROL

Laboratory QC samples were prepared and analyzed by the laboratory to monitor the analytical accuracy and precision processes. The laboratory analyzed all QC samples at the method-required frequencies and as specified in the project-specific Final QAPP Addendum (NOREAS, 2018) and DoD QSM version 5.1 (DoD, 2017). The laboratory QC samples for this project included method/laboratory blanks, initial and continuing calibration blanks, LCSs, initial and continuing calibration verifications, second source calibration verification standards (PAHs only), surrogate spikes (PAHs only), interference check standards (metals only), and MS/MSD samples.

Laboratory QC analyses were within the project-specified or method criteria except for the following constituents and samples:

Synectics #280-133155-1

Lab Work Order# 280-133155-1: (APN32405263A, APN32405265)

PAHs by EPA Method 8270C SIM

- Lab method blank for benzo(a) anthracene, chrysene, fluoranthene, phenanthrene, and pyrene, detected in EB-01212020, were adjusted to "U"-flag (not detected) at the limit of quantitation (LOQ). Chrysene, fluoranthene, phenanthrene, and pyrene detected in EB-01222020, were qualified using a "U"-flag.
- Lab method blank was outside the control limit for 2- methylnaphthalene, qualified using a "U"-flag in affected samples MRS03-APN32405263A-SS001R, -SS002R, -SS003R, and -SS1001R. Method blank and surrogate recoveries were outside control limits for 2-methylnaphthalene, qualified using a "UJ"-flag in affected samples MRS03-APN32405263A-SS1002R, -SS1003R, and -SS2001R through -SS2003R.
- Surrogate recovery was outside the control limit for dibenz(a,h)anthracene, qualified using a "UJ"-flag in affected sample MRS03-APN32405263A-SS1002R, and for acenaphthene, anthracene, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(g,h,i)perylene, benzo(k)fluoranthene, chrysene, dibenz(a,h)anthracene, fluoranthene, fluorene, indeno(1,2,3-cd)pyrene, naphthalene, phenanthrene, and pyrene, qualified using a "UJ"-flag in affected samples MRS03-APN32405263A-SS1003R and -SS2003R. Surrogate recoveries were outside control and trace level detects for acenaphthene, anthracene, benzo(g,h,i)perylene, benzo(k)fluoranthene, fluorene, indeno(1,2,3-cd)pyrene, and naphthalene, qualified using a "J"-flag (estimated) in affected sample MRS03-APN32405263A-SS1002R, and naphthalene, qualified using a "U"-flag in affected samples MRS03-APN32405263A-SS1003R and -SS2003R.
- MS and surrogate recoveries were outside control limits for benzo(a)anthracene, benzo(b)fluoranthene, chrysene, fluoranthene, phenanthrene, and pyrene qualified using a "J"-flag in affected sample MRS03-APN32405263A-SS1002R. MS and surrogate

recoveries were outside control limits and trace level detect for benzo(a)pyrene, qualified using a "J"-flag in affected sample MRS03-APN32405263A-SS1002R.

- Surrogate recoveries were outside control limits for acenaphthene, qualified using a "J"-flag in affected sample MRS03-APN32405265-SS003R, for acenaphthene, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(g,h,i)perylene, benzo(k)fluoranthene, chrysene, fluorene, indeno(1,2,3-cd)pyrene, and phenanthrene, qualified using a "J"-flag and anthracene and dibenz(a,h)anthracene, qualified using a "UJ"-flag (not detected estimated) in affected sample MRS03-APN32405265-SS1003R; for acenaphthene, anthracene, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(g,h,i)perylene, benzo(k)fluoranthene, chrysene, dibenz(a,h)anthracene, fluoranthene, fluorene, indeno(1,2,3-cd)pyrene, phenanthrene, and pyrene qualified using a "UJ"-flag in affected samples MRS03-APN32405265-SS2002R and -SS2003R.
- Lab method blank was outside the control limit for 2-methylnaphthalene qualified using a "U"-flag in affected sample MRS03-APN32405265-SS001R, -SS002R, -SS003R, and SS1002R.
- Surrogate recoveries and lab method blank detect was outside control limits for 2-methylnaphthalene, qualified using a "UJ"-flag in affected samples MRS03-APN32405265-SS1001R, -SS1003R, -SS2002R, and -SS2003R. Surrogate recoveries was outside control limit and trace level detect for naphthalene, qualified using a "J"-flag in affected samples MRS03-APN32405265-SS1001R, -SS2002R, and -SS2003R; and for acenaphthene, benzo(a)anthracene, benzo(k)fluoranthene, fluorene, indeno(1,2,3-cd)pyrene, naphthalene, and phenanthrene, qualified using a "J"-flag in affected sample MRS03-APN32405265-SS1003R.

Metals by EPA Method 6010B

- MS recoveries outside control limits for antimony, lead, and zinc in affected sample MRS03-APN32405263A-SS1002R were qualified using a "UJ"-flag or a "J"-flag.

Synectics #280-133194-1

Lab Work Order# 280-133194-1: (APN32437017, APN31021063B)

PAHs by EPA Method 8270C SIM

- Benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, and chrysene detected at trace concentrations in method blank and LCS recovery for benzo(a)anthracene in EB-01232020 were adjusted to a "U"-flag or a "UJ"-flag at the LOQ.
- LCS recovery for benzo(a)anthracene was slightly outside project limits in EB-01232020, qualified using a "UJ"-flag.
- LCS recovery for benzo(a)anthracene, qualified using a 'UJ"-flag, and lab method blank for benzo(a)pyrene, benzo(b)fluoranthene, and chrysene qualified using a 'U"-flag, were outside project limits for EB-01242020.

Metals by EPA Method 6010B

- Interference check exceeded for antimony, were qualified using a "UJ"-flag.
- MS/MSD recoveries outside control limits for antimony, copper, lead, and zinc in affected (spiked) sample MRS03-APN32437017-SS001R, were qualified using a "UJ"-flagfor antimony, and a "J"-flag for copper, lead, and zinc.

Synectics #280-133354-1

Lab Work Order# 280-133354-1: (APN31021063C, APN31021063D, APN31021063E)

PAHs by EPA Method 8270C SIM

- Acenaphthene and/or phenanthrene were detected in method blank at levels below half the LOQ. Therefore, analyte results in the affected samples were adjusted to UJ" at the LOQ or at the LOD values.
- LCS was exceeded for acenaphthene, 2-methylnaphthalene, fluorene, and naphthalene in affected sample MRS03-APN31021063D-SS00, qualified using a "UJ"-flag.
- MS recoveries outside control limits for fluoranthene and pyrene in affected sample MRS03-APN31021063C-SS1001 were qualified using a "J"-flag.
- MS RPD value outside control limits for fluoranthene and naphthalene in affected sample MRS03-APN31021063C-SS1001 were qualified using a "J"-flag.
- Maximum extraction holding time was exceeded for PAHs in samples MRS03-APN31021063D-SS002, -SS003, -SS1001, -SS1002, -SS1003, -SS2001, -SS2002, -SS2003; MRS03-APN31021063E-SS1002, -SS1003, -SS2001, -SS2002, and –SS2003, but within 2x the extraction holding time. All PAHs were qualified using a "J"-flag or"UJ"-flag.
- Surrogate recovery were outside control limits for MRS03-APN31021063C-SS001, -SS002, -SS003, -SS1001, -SS1002, -SS2001, -SS2003 and MRS03-APN31021063E-SS1001. Sample results were qualified using a "UJ"-flag or a "J"-flag for detections.

Metals by EPA Method 6010B

- Copper was detected in the grinding blanks. Affected samples MRS03-APN31021063C-SS1001, -SS1002; -SS2001 through –SS2003; and MRS03-APN31021063E-SS003 were qualified using a "UJ"-flag or a "J"-flag.
- MS/MSD recoveries outside control limits for antimony, copper, lead, and/or zinc in affected samples MRS03- APN31021063C-SS1001 and MRS03-APN31021063E-SS1002 were qualified using a "J"-flag or "UJ"-flag.

Synectics #280-133388-1

Lab Work Order# 280-133388-1: (APN31021063F, APN31021063G)

PAHs by EPA Method 8270C SIM

- MS recoveries were outside control limits for select PAHs in affected sample MRS03-APN31021063G-SS003, qualified using a "J"-flag. MS/MSD RPD in affected sample MRS03- APN31021063G-SS003 exceeded project limit and qualified using a "J"-flag.
- Surrogate recoveries were outside of the project limits in sample MRS03-APN31021063F-SS001. Analyte results were qualified using "J"-flag or "UJ"-flag.

Metals by EPA Method 6010B

- MS recoveries were outside control limits for antimony, copper, lead, and zinc in affected sample MRS03-APN31021063G-SS003. Copper, lead and zinc were qualified using a "J"-flag and antimony, qualified using "UJ"-flag.
- Trace amount of lead was detected in the laboratory calibration blank and method blank, but below the LOQ. Lead concentration in the affected samples, EB-01302020 and EB-01312020, were adjusted using a "U"-flag at the LOQ.

Synectics #280-133798-1

Lab Work Order# 280-133798-1: (APN31021063A, APN31021063H, APN31021063I)

PAHs by EPA Method 8270C SIM

- Lab blank outside project limit for 2-methylnaphthalene, was qualified using a 'U"-flag in EB-02122020.
- MS recoveries were outside project limit for fluoranthene in affected sample MRS03-APN31021063A-SS1002 using a "J-flag" for detected results. MS/MSD RPD and MS recoveries were outside project limits for several PAHs. All PAHs were qualified in the affected sample MRS03-APN31021063H-SS003 using a "J"-flag for detected results.

Metals by EPA Method 6010B

- MS and/or MSD recoveries were outside control limits for antimony, lead, and zinc. Data for these analytes in affected (spiked) samples MRS03-APN31021063A-SS1002 and MRS03-APN31021063H-SS003 were qualified using a "J"-flag or "UJ"-flag. MS recovery was outside control limit for copper in affected sample MRS03-APN31021063A-SS1002; qualified using a "J"flag.
- Post spike recovery (M2) for lead exceeded control limits. Lead result in sample MRS03-APN31021063H-SS003 was qualified using a "J"-flag.

Synectics #280-133817-1

Lab Work Order# 280-133817-1: (APN31021063J, APN31021063K)

PAHs by EPA Method 8270C SIM

- Benzo(a)pyrene exceeded the MSD recovery criteria in affected sample MRS03-APN31021063J-SS003 was qualified using a "J"-flag.

- MS RPD recovery was outside project limits for benzo(g,h,i)perylene, dibenz(a,h)anthracene, and indeno(1,2,3-cd)pyrene, qualified using a "J"-flag; MS and MS RPD recoveries were outside project limit for benzo(a)pyrene, qualified using a "J"-flag in affected sample MRS03-APN31021063J-SS003; and MS recovery was outside project limit for and trace level detect for 2-methylnaphthalene, qualified using a "J"-flag in affected sample MRS03-APN31021063J-SS003.
- Interference check and trace level detect for 2-methylnaphthalene and naphthalene qualified using a "J"-flag in affected sample MRS03-APN31021063J-SS2001.

Metals by EPA Method 6010B

- MS recoveries were outside control limits for antimony, lead, and zinc. Data for these analytes in affected sample MRS03-APN31021063J-SS003 were qualified using a "J"-flag for lead and zinc results and a "UJ"-flag for antimony.

Synectics #280-133930-1

Lab Work Order# 280-133930-1: (APN31021078A, APN32405267)

PAHs by EPA Method 8270C SIM

- Preparatory holding time exceeded for sample MRS03-APN31021078A-SS2001, resulting in validation qualification of "J"-flag for detects "UJ" for non-detects for all PAHs.
- Surrogate recoveries for all 16 PAHs were outside project limits in samples MRS03-APN31021078A-SS002, MRS03-APN32405267-SS1001R, and MRS03-APN32405267-SS2003R. Data were qualified using a "J"-flag or "UJ"-flag for all PAHs.

Metals by EPA Method 6010B

- MS recovery for antimony was outside control limit in affected sample MRS03-APN31021078A-SS1001 was qualified using a "UJ"-flag. MRS03-APN31021063J-SS003 were qualified using a "J"-flag for lead and zinc an "UJ"-flag for antimony.

Synectics #280-133977-1

Lab Work Order# 280-133977-1: (APN31021078B, APN32404668)

PAHs by EPA Method 8270C SIM

- Surrogate recoveries outside the limits for all PAHs in EB-02212020, were qualified using a 'UJ"-flag.
- Trace level of 2-methylnaphthalene was detected in the method blank at a level below ½ the LOQ. Therefore, analyte results in the affected samples MRS03-APN31021078B-SS001 and –SS003 were adjusted to "UJ"-flag at the LOD.
- MS recoveries outside project limits for pyrene, chrysene, fluoranthene, and benzo(b)fluoranthene in affected sample MRS03-APN31021078B-SS003 were qualified using a "J"-flag.

- Detections in the method blank outside acceptance criteria for benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, chrysene, fluoranthene, and pyrene in sample MRS03-APN32404688-SS2001, were qualified with a "U"-flag.
- Laboratory replicate RPD outside acceptance criteria affected samples MRS03-APN32404688-SS1001, -SS1002, and -SS1003. Benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, benzo(g,h,i)perylene, chrysene, fluoranthene, indeno(1,2,3-c,d)pyrene, phenanthrene, and pyrene were qualified with a "J"-flag.
- Surrogate recoveries were outside acceptance criteria. In sample MRS03-APN32404688-SS001, 2—methylnaphthalene, acenaphthene, anthracene, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, benzo(g,h,i)perylene, chrysene, dibenz(a,h)anthracene, fluoranthene, indeno(1,2,3-c,d)pyrene, naphthalene, phenanthrene, and pyrene were qualified with a "J"-flag and fluorene was qualified with a "UJ"-flag. In sample MRS03-APN32404688- SS1003, 2-methylnaphthalene, acenaphthene, anthracene, dibenz(a,h)anthracene, fluorene, and naphthalene were qualified with a "J"-flag.

Metals by EPA Method 6010B

- Method blank was outside the control limit for copper in affected samples MRS03-APN31021078B-SS001R, -SS002R, -SS003, -SS1001, -SS1002, -SS1003, -SS2001, -SS2002, and -SS2003 and qualified using a "U"-flag (undetected).
- Due to interference check sample outside acceptance criteria, antimony in samples MRS03-APN32404688-SS001, -SS002, -SS003, -SS1001, -SS1002, -SS1003, -SS2001, -SS2002, and -SS2003 were qualified with a "UJ"-flag.
- Due to MS recovery outside acceptance criteria, zinc in samples MRS03-APN32404688-SS1001, -SS1002, and -SS1003 were qualified with a "J"-flag.

Synectics #280-134120-1

Lab Work Order# 280-134120-1: (APN31021078C, APN32404558)

PAHs by EPA Method 8270C SIM

- LCS recoveries outside project limits in EB-02252020 and EB-02262020 for all PAHs were qualified using a "UJ"-flag.
- MS recoveries and MS/MSD RPD values outside project limits in sample MRS03-APN32404558-SS003R for select PAHs in affected sample MRS03-APN32404558-SS003R, were qualified using a "J"-flag.

Metals by EPA Method 6010B

- MS recoveries were outside project limits for antimony, qualified using a "UJ"-flag and lead qualified using a "J"-flag, in affected sample MRS03-APN32404558-SS003R.

Synectics #280-134175-1

Lab Work Order# 280-134175-1: (APN31021078D, APN31021078E)

PAHs by EPA Method 8270C SIM

- LCS recoveries outside project limits in EB-02272020 and EB-02262020 for all PAHs were qualified using a "UJ"-flag. RPD recovery and trace detection of phenanthrene in sample EB-02272020 was qualified using a "J"-flag.

Metals by EPA Method 6010B

- Method blank was outside the control limit for copper in affected sample MRS03-APN31021078E-SS2002R and qualified using a "J"-flag.
- MS recovery was outside the limit for antimony in affected sample MRS03-APN31021078E-SS1003 were qualified using a "U"-flag.
- Laboratory RPD, RSD and MS recovery and RPD for lead in affected sample MRS03-APN31021078E-SS1003 were qualified using a "J"-flag.

Metals by EPA Method 6010B

- MS recovery was outside the limit for antimony in affected samples MRS03-APN31021078D-SS001, -SS002, -SS003, -SS1001, -SS1002, -SS1003, -SS2001, -SS2002, and -SS2003 were qualified using a "UJ"-flag. Lead and zinc in affected sample MRS03-APN31021078D-SS1003 were qualified using a "J"-flag.
- MS recovery was outside the limit for antimony in affected sample MRS03-APN31021078E-SS1003 were qualified using a "U"-flag.
- Laboratory RPD, RSD and MS recovery and RPD for lead in affected sample MRS03-APN31021078E-SS1003 were qualified using a "J"-flag.

Synectics #280-134332-1

Lab Work Order# 280-134332-1: (APN31021078F)

PAHs by EPA Method 8270C SIM

- Closing continuing calibration verification (CCV) standard recoveries for indeno(1,2,3-c,d)pyrene and benzo(g,h,i)perylene outside project limits in affected samples APN31021078F-SS1001, -SS1002, and –SS1003, were qualified using a "J"-flag.
- MSD recoveries outside project limits for benzo(g,h,i)perylene in sample MRS03-APN31021078F-SS1002, was qualified using a "J"-flag.

Metals by EPA Method 6010B

- Lab duplicate RPD value outside project limit for lead in sample MRS03-APN31021078F-SS1002, was qualified using a "J"-flag.

- MS and MSD recoveries wereoutside project limits for antimony, qualified using a "UJ"-flag, and lead and zinc qualified using a "J"-flag, in affected sample MRS03-APN31021078F-SS1002.
- Serial dilution test result for lead was outside acceptance limit of ±10%. Lead result in affected sample MRS03-APN31021078F-SS1002 was qualified using a "J"-flag.

Synectics #280-134405-1

Lab Work Order# 280-134405-1: (APN31021078G)

PAHs by EPA Method 8270C SIM

- MSD and MS/MSD RPD recoveries outside project limits in sample MRS03-APN31021078G-SS002 for select PAH, were qualified using a "J"-flag.
- Surrogate recovery for 2-methylnaphthalene outside project limits in sample MRS03-APN31021078G-SS1002 for all PAHs analyzed, were qualified using a "J"-flag or "UJ"-flag. .

Metals by EPA Method 6010B

- Trace values of copper were found in the laboratory grinding blank. Copper detections in affected samples MRS03-APN31021078G-SS001, -SS003, -SS1001, -SS1002, -SS1003, and -SS2003 were qualified using a "U"-flag.
- Laboratory triplicate analysis RSD slightly exceeding the control limit for lead in affected sample MRS03-APN31021078G-SS002, was qualified using a "J"-flag.
- MS/MSD recoveries were outside project limits for antimony, qualified using a "UJ"-flag, and lead and zinc, qualified using a "J"-flag, in affected sample MRS03-APN31021078G-SS002.
- Serial dilution test result for lead was outside acceptance limit of ±10%. Lead result in affected sample MRS03-APN31021078G-SS002 was qualified using a "J".

Synectics #280-134430-1

Lab Work Order# 280-134430-1: (APN31021078H, APN32439020)

PAHs by EPA Method 8270C SIM

- Trace levels of acenaphthene, 2-methylnaphthalene, and naphthalene were detected in the method blank at levels below ½ the LOQ. Therefore, analyte results in the affected samples MRS03-APN31021078H-SS001, SS002, –SS003, -SS1001, -SS1003, and –SS2003 and MRS03-APN32439020-SS001R, –SS002R, -SS003R, -SS1001R, and -SS1002R were qualified using a "U"-flag.
- Surrogate recovery for 2-methylnaphthalene were outside project limits in sample MRS03-APN31021078H-SS2002 for all PAHs were qualified using a "UJ"-flag.

Metals by EPA Method 6010B

- MS/MSD recoveries were outside project limits for antimony, qualified using a "UJ"-flag, and lead and zinc, qualified using a "J"-flag, in affected sample MRS03-APN31021078H-SS2001.

Lab Work Order# 280-141345-1 (APN31038002L)

PAHs by EPA Method 8270C SIM

- Surrogate recoveries were outside control limits for all PAH analytes analyzed in affected samples MRS03-APN31038002L-SS1001, -SS1002, and -SS2002, qualified using a "UJ"-flag.

Metals by EPA Method 6010B

- MS recovery were outside control limit for antimony qualified using a "UJ"-flag and lead qualified using a "U"-flag for MRS03-APN31038002L-SS2001.

Synectics #280-141379-1

Lab Work Order# 280-141379-1 (APN31038002J)

PAHs by EPA Method 8270C SIM

- Surrogate recoveries were outside control limits for all PAH analytes analyzed in affected samples MRS03-APN31038002J-SS002 and -SS2001. With the exception of 2-methylnaphthalene, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(g,h,i)perylene, benzo(k)fluoranthene, chrysene, fluoranthene, indeno(1,2,3-cd)pyrene, naphthalene, phenanthrene, and pyrene in affected sample MRS03-APN31038002J-SS002 qualified using a "J"-flag, all other analytes were qualified using a "UJ"-flag in samples MRS03-APN31038002J-SS002 and -SS2001.

Metals by EPA Method 6010B

- MS recovery were outside control limit for antimony qualified using a "UJ"-flag and lead qualified using a "U"-flag for MRS03-APN31038002L-SS2001.

Synectics #280-141415-1

Lab Work Order# 280-141415-1 (APN31038002K)

PAHs by EPA Method 8270C SIM

- Surrogate recoveries outside the limits for all PAHs in EB-10072020, were qualified using a 'UJ"-flag.
- Surrogate recoveries were outside control limits for all PAH analytes analyzed in affected samples MRS03-APN31038002K-SS002, -SS003, and -SS2003. With the exception of, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, fluoranthene, indeno(1,2,3-cd)pyrene, naphthalene, phenanthrene, and pyrene in affected sample MRS03-APN31038002K-SS002, and benzo(a)anthracene, benzo(b)fluoranthene, benzo(g,h,i)perylene, benzo(k)fluoranthene, chrysene, fluoranthene, indeno(1,2,3-cd)pyrene, naphthalene, phenanthrene, and pyrene in affected sample MRS03-APN31038002K-SS003 qualified using a "J"-flag, all other analytes were qualified using a "UJ"-flag in samples MRS03-APN31038002K-SS002, -SS003, and -SS2003.
- MS and surrogate recoveries and trace level detects for benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, fluoranthene, phenanthrene, and pyrene in affected sample MRS03-APN31038002K-SS002 was qualified using a "J"-flag.

Metals by EPA Method 6010B

- MS and M2 recoveries were outside control limit for antimony, qualified using a "UJ"-flag, MS recoveries were outside control limit for lead and zinc qualified using a "J"-flag for MRS03-APN31038002K-SS002.

Synectics #280-141435-1

Lab Work Order# 280-141435-1 (APN31038002E)

- No qualifiers required

Synectics #280-141651-1

Lab Work Order# 280-141651-1 (APN31038002G)

PAHs by EPA Method 8270C SIM

- Surrogate recoveries were outside control limits for all PAH analytes analyzed in affected samples MRS03-APN31038002G-SS1003, -SS2001, -SS2002, and -SS2003. With the exception of 2-methylnaphthalene in affected samples MRS03-APN31038002G-SS2001 and -SS2003, qualified using a "J"-flag, all other analytes were qualified using a "UJ"-flag.
- MS recovery was outside the limit for antimony in affected sample MRS03-APN31021063G-SS003, qualified using a "UJ"-flag.

Synectics #280-141652-1

Lab Work Order# 280-141652-1 (APN31038002-SS001R and -SS002R)

- No qualifiers required

Synectics #280-141684-1

Lab Work Order# 280-141684-1 (APN31038002F, APN31038002I)

PAHs by EPA Method 8270C SIM

- MS, MS RPD recoveries were outside control limits for benzo(a)anthracene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, fluoranthene, and pyrene, and trace level detects for benzo(a)anthracene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, and pyrene, were qualified using a "J"-flag in affected sample MRS03-APN31038002I-SS002.

Metals by EPA Method 6010B

- MS recoveries were outside control limit for antimony, qualified using a "UJ"-flag, and lead and zinc, qualified using a "J"-flag for MRS03-APN31038002I-SS002. Additionally, lab replicate and lab triplicate RSD were also outside control limits for lead.

Synectics #280-141866-1

Lab Work Order# 280-141866-1 (APN31038002B, APN31038002H)

PAHs by EPA Method 8270C SIM

- Surrogate recoveries outside the limits for all PAHs in EB-10202020, were qualified using a 'J"-flag or a "UJ"-flag. Surrogate recoveries outside the limits for all PAHs in EB-10212020, were qualified using a "UJ"-flag.
- Surrogate recoveries were outside control limits for all PAH 16 analytes analyzed (i.e., 2-methylnaphthalene, acenaphthene, anthracene, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(g,h,i)perylene, benzo(k)fluoranthene, chrysene, dibenz(a,h)anthracene, fluoranthene, fluorene, indeno(1,2,3-cd)pyrene, naphthalene, phenanthrene, and pyrene) in affected samples MRS03-APN31038002B-SS001 and MRS03-APN31038002B-SS1001. Additionally, column breakdown (pesticide 8270) occurred for all 16 PAH analytes in affected sample MRS03-APN31038002B-SS001. With the exception of benzo(a)pyrene and dibenz(a,h)anthracene, qualified using a "U"-flag (undetected) for detected results, all other analytes in sample MRS03-APN31038002B-SS001 were qualified using a "J"-flag (estimated). With the exception of 2-methylnaphthalene, acenaphthene, anthracene, benzo(k)fluoranthene, dibenz(a,h)anthracene, fluoranthene, and naphthalene in sample MRS03-APN31038002B-SS1001, qualified using a "UJ"-flag (undetected estimated) for detected results, all other analytes were qualified using a "J"-flag.
- Trace level detect and column breakdown (pesticide 8270) occurred for 2-methylnaphthalene, benzo(a)anthracene, benzo(b)fluoranthene, benzo(g,h,i)perylene, benzo(k)fluoranthene, chrysene, fluoranthene, indeno(1,2,3-cd)pyrene, naphthalene, phenanthrene, and pyrene in affected sample MRS03-APN31038002H-SS001, 2-methylnaphthalene, benzo(b)fluoranthene, fluoranthene, fluorene, naphthalene, and pyrene

in affected sample MRS03-APN31038002H-SS002, 2-methylnaphthalene, benzo(b)fluoranthene, chrysene, fluoranthene, fluorene, naphthalene, and pyrene in affected sample MRS03-APN31038002H-SS003, and for naphthalene in affected sample MRS03-APN31038002H-SS1002, all qualified using a "J"-flag.

Metals by EPA Method 6010B

- MS recovery outside control limit for antimony in affected sample MRS03-APN31038002B-SS001 was qualified using a "UJ"-flag for detected result. MS recovery and M2 outside control limit for zinc in affected sample MRS03-APN31038002B-SS001 was qualified using a "J"-flag for detected result.
- MS recovery outside control limits for antimony was qualified using a "UJ"-flag, and MS and M2 recovery outside control limits for zinc was qualified using a "J"-flag in affected sample MRS03-APN31038002H-SS001.

Synectics #280-141927-1

Lab Work Order# 280-141927-1 (APN31038002Q, APN31040005A)

PAHs by EPA Method 8270C SIM

- Surrogate recoveries outside the limits for all PAHs in EB-10222020, were qualified using a "UJ"-flag.
- Surrogate recoveries were outside control limits for all PAH 16 analytes analyzed (i.e., 2-methylnaphthalene, acenaphthene, anthracene, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(g,h,i)perylene, benzo(k)fluoranthene, chrysene, dibenz(a,h)anthracene, fluoranthene, fluorene, indeno(1,2,3-cd)pyrene, naphthalene, phenanthrene, and pyrene) in affected samples MRS03-APN31040005A-SS001, -SS002, -SS003, -SS1001, -SS1002, and -SS2002. With the exception of benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, chrysene, fluoranthene, naphthalene, phenanthrene, and pyrene in sample MRS03-APN31040005A-SS001, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, chrysene, fluoranthene, indeno(1,2,3-cd)pyrene naphthalene, phenanthrene, and pyrene in sample MRS03-APN31040005A-SS002, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(g,h,i)perylene, benzo(k)fluoranthene, chrysene, fluoranthene, indeno(1,2,3-cd)pyrene, naphthalene, phenanthrene, and pyrene in sample MRS03-APN31040005A-SS003, qualified using a "J"-flag (undetected estimated) for detected results, all other analytes were qualified using a "UJ"-flag (undetected estimated).

Metals by EPA Method 6010B

- MS recovery outside control limit for antimony in affected sample MRS03-APN31040005A-SS1002 was qualified using a "UJ"-flag for detected result. MS recovery and M2 outside control limit for copper, lead, and zinc in affected sample MRS03-APN31040005A-SS1002 was qualified using a "J"-flag for detected result.

Synectics #280-141995-1

Lab Work Order# 280-141995-1 (APN31040005B)

PAHs by EPA Method 8270C SIM

- Surrogate recoveries were outside control limits for all PAH 16 analytes analyzed in affected sample MRS03-APN31040005B-SS2002 qualified using a "U"-flag (undetected).
- MS recovery and MS RPD were outside control limits and trace level detect for fluoranthene and MS recovery and MS RPD were outside control limits for pyrene in affected sample MRS03-APN31040005B-SS001, was qualified using a "J"-flag for detected results.

Metals by EPA Method 6010B

- MS recovery outside control limit for antimony in affected sample MRS03-APN31040005B-SS1001 was qualified using a "UJ"-flag for detected result. MS recovery was qualified outside control limit for copper, lead, and zinc in affected sample MRS03-APN31040005B-SS1001 was qualified using a "J"-flag for detected result.

Synectics #280-142106-1

Lab Work Order# 280-142106-1 (APN31040005C, APN31040005D)

PAHs by EPA Method 8270C SIM

- Surrogate recoveries were outside control limits for all PAH 16 analytes analyzed in affected samples MRS03-APN31040005D-SS003, -SS1002, -SS2001, -SS2002, and -SS2003. With the exception of benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(g,h,i)perylene chrysene, fluoranthene, naphthalene, and pyrene in sample MRS03-APN31040005D-SS003, chrysene, fluoranthene, phenanthrene, and pyrene in sample MRS03-APN31040005D-SS1002, and naphthalene in sample MRS03-APN31040005D-SS2003, qualified using a "J"-flag (undetected estimated) for detected results, all other analytes were qualified using a "UJ"-flag.
- MS recovery outside control limit for zinc in affected sample MRS03-APN31040005D-SS003 was qualified using a "J"-flag for detected result. MS recovery and M2 outside control limit for antimony in affected sample MRS03-APN31040005D-SS003 was qualified using a "UJ"-flag for detected result.

Synectics #280-142167-1

Lab Work Order# 280-142167-1 (APN31040005E, APN31040005F)

PAHs by EPA Method 8270C SIM

- Surrogate recoveries were outside control limits for all PAH 16 analytes analyzed in affected samples MRS03-APN31040005F-SS003, -SS1002, -SS2001, -SS2002, and -SS2003. With the exception of acenaphthene, dibenz(a,h)anthracene, and fluorene in sample MRS03-APN31040005F-SS002, , qualified using a "UJ"-flag for detected results, all other analytes were qualified using a "J"-flag.

Metals by EPA Method 6010B

- MS recovery and M2 outside control limit for antimony in affected sample MRS03-APN31040005E-SS1003 was qualified using a "UJ"-flag for detected result.

Synectics #280-142229-1

Lab Work Order# 280-142229-1 (APN31040005G)

PAHs by EPA Method 8270C SIM

- Surrogate recoveries were outside control limits for all 16 PAH analytes analyzed in affected samples MRS03-APN31040005G-SS001, -SS002, -SS003, and -SS103. With the exception of acenaphthene, anthracene, dibenz(a,h)anthracene, and fluorene in affected samples MRS03-APN31040005G-SS001, -SS003, and -SS1003, 2-methylnaphthalene, acenaphthene, anthracene, dibenz(a,h)anthracene, and fluorene in affected sample MRS03-APN31040005G-SS002, qualified using a "UJ"-flag, all other analytes were qualified using a "J"-flag.

Metals by EPA Method 6010B

- MS and M2 recoveries were outside the limit for antimony, qualified using a "UJ"-flag and zinc, qualified using a "J"-flag in affected sample MRS03-APN31040005G-SS002. MS recovery was outside the limit for lead in affected sample MRS03-APN31040005G-SS002, qualified using a "J"-flag.

Synectics #280-142376-1

Lab Work Order# 280-142376-1 (APN31040005H, APN31040005I)

PAHs by EPA Method 8270C SIM

- Surrogate recoveries were outside control limits for all PAH analytes analyzed in affected sample MRS03-APN31040005H-SS2003. With the exception of 2-methylnaphthalene, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(g,h,i)perylene, benzo(k)fluoranthene, chrysene, indeno(1,2,3-cd)pyrene, and naphthalene, qualified using a "J"-flag, all other analytes were qualified using a "UJ"-flag.
- Surrogate recoveries were outside control limits for all 16 PAH analytes analyzed in affected samples MRS03-APN31040005I-SS001 and -SS002. With the exception of acenaphthene, anthracene benzo(a)anthracene, benzo(g,h,i)perylene, benzo(k)fluoranthene, fluorene, indeno(1,2,3-cd)pyrene, and phenanthrene in affected sample MRS03-APN31040005I-SS001, and dibenz(a,h)anthracene in affected sample MRS03-APN31040005I-SS002, qualified using a "UJ"-flag, all other analytes were qualified using a "J"-flag.

Metals by EPA Method 6010B

- MS recovery was outside control limit for antimony, qualified using a "UJ"-flag, and zinc, qualified using a J"-flag for MRS03-APN31040005I-SS001. Additionally, lab replicate and lab triplicate RSD were also outside control limits for lead.

Synectics #280-142491-1

Lab Work Order# 280-142491-1 (APN31040005J)

PAHs by EPA Method 8270C SIM

- Surrogate recoveries outside the limits for all PAHs in EB-11042020 and EB-11052020, were qualified using a "UJ"-flag.
- Surrogate recoveries were outside control limits for all PAH analytes analyzed in affected samples MRS03-APN31040005J-SS001 through -SS2003. With the exception of benzo(a)pyrene, benzo(b)fluoranthene, chrysene, and naphthalene in affected sample MRS03-APN31040001J-SS001, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, chrysene, fluoranthene, and naphthalene in affected sample MRS03-APN31040001J-SS002, benzo(a)anthracene, benzo(a)pyrene, chrysene, naphthalene, fluoranthene, and pyrene in affected sample MRS03-APN31040001J-SS003, chrysene and naphthalene in affected sample MRS03-APN31040001J-SS1002J, fluoranthene and naphthalene in affected sample MRS03-APN31040001J-SS1003J, naphthalene in affected sample MRS03-APN31040001J-SS2003J qualified using a "J"-flag, all other analytes were qualified using a "UJ"-flag.
- LCS recoveries were outside the control limit for acenaphthene in affected samples MRS03-APN31040005J-SS001 through -SS2003 qualified using a "J"-flag for all analytes.

Synectics #280-142540-1

Lab Work Order# 280-142540-1 (APN31040005L)

PAHs by EPA Method 8270C SIM

- Surrogate recoveries outside the limits for all PAHs in EB-11062020, were qualified using a "UJ"-flag.
- Surrogate recoveries were outside control limits for all PAH analytes analyzed in affected samples MRS03-APN31040005L-SS001 through -SS2003. With the exception of naphthalene in affected samples MRS03-APN31040005L-SS001, -SS003, -SS2001, and 2003, chrysene, fluoranthene, naphthalene, phenanthrene, and pyrene in affected sample MRS03-APN31040005L-SS002, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(g,h,i)perylene, benzo(k)fluoranthene, chrysene, fluoranthene, indeno(1,2,3-cd)pyrene, phenanthrene, and pyrene in affected sample MRS03-APN31040005L-SS1001 and -SS1002, and 2-methylnaphthalene, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(g,h,i)perylene, benzo(k)fluoranthene, chrysene, fluoranthene, indeno(1,2,3-cd)pyrene, phenanthrene, and pyrene in affected sample MRS03-APN31040005L-SS1003, qualified using a "J"-flag, all other analytes were qualified using a "UJ"-flag in samples.

Metals by EPA Method 6010B

- Method blank was outside the control limit for copper, qualified using a "U"-flag, and for lead qualified using a "J"-flag in affected sample MRS03-APN31040005L-SS001. Method

blank was outside the control limit for lead qualified using a "J"-flag in affected sample MRS03-APN31040005L-SS002.

Synectics #280-142966-1

Lab Work Order# 280-142966-1 (Thomp Q)

PAHs by EPA Method 8270C SIM

- Surrogate recovery was outside project limit for acenaphthene, anthracene, benzo(a)anthracene, benzo(g,h,i)perylene, benzo(k)fluoranthene, dibenz(a,h)anthracene, naphthalene, phenanthrene, and pyrene, qualified using a "J"-flag in affected sample MRS03-ThompQ-SS001; for 2-methylnaphthalene and fluorene, qualified using a "J"-flag in affected sample MRS03-ThompQ-SS002; for anthracene, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(g,h,i)perylene, benzo(k)fluoranthene, chrysene, dibenz(a,h)anthracene, fluoranthene, indeno(1,2,3-cd)pyrene, phenanthrene, and pyrene, qualified using a "J"-flag in affected sample MRS03-ThompQ-SS1003; for acenaphthene, anthracene, benzo(a)anthracene, benzo(a)pyrene, benzo(g,h,i)perylene, benzo(k)fluoranthene, dibenz(a,h)anthracene, fluorene, indeno(1,2,3-cd)pyrene, phenanthrene, and pyrene, qualified using a "UJ"-flag in affected sample MRS03-ThompQ-SS2001; and for acenaphthene, anthracene, dibenz(a,h)anthracene, fluoranthene, qualified using a "UJ"-flag, and benzo(a)pyrene, benzo(b)fluoranthene, chrysene, fluoranthene, and pyrene, qualified using a "J"-flag in affected sample MRS03-ThompQ-SS2003.
- Surrogate recovery and trace detect for 2-methylnaphthalene and fluorene, qualified using a "J"-flag in affected sample MRS03-ThompQ-SS001; for 2-methylnaphthalene, acenaphthene, fluorene and naphthalene, qualified using a "J"-flag in affected sample MRS03-ThompQ-SS1003; for 2-methylnaphthalene, benzo(b)fluoranthene, chrysene, fluoranthene, and naphthalene, qualified using a "J"-flag in affected sample MRS03-ThompQ-SS2001; and for 2-methylnaphthalene, benzo(a)anthracene, benzo(g,h,i)perylene, benzo(k)fluoranthene, indeno(1,2,3-cd)pyrene, naphthalene, and phenanthrene, qualified using a "J"-flag in affected sample MRS03-ThompQ-SS2003.
- MS recovery was outside project limit for benzo(g,h,i)perylene, qualified using a "J"-flag in affected sample MRS03-ThompQ-SS002.
- MS and surrogate recoveries were outside project limits for acenaphthene, anthracene, dibenz(a,h)anthracene, and naphthalene, qualified using a "J"-flag in affected sample MRS03-ThompQ-SS002.

Metals by EPA Method 6010B

- MS recovery was outside project limit for antimony, qualified using a "UJ"-flag in affected sample MRS03-ThompQ-SS002.
- MS and post spike recoveries were outside project limit for zinc, qualified using a "J"-flag in affected sample MRS03-ThompQ-SS002.

- Lab replicate RPD, lab triplicate RSD, MS and M2 recoveries were outside project limits for lead, qualified using a "J"-flag in affected sample MRS03-ThompQ-SS002.

Synectics #280-143061-1

Lab Work Order# 280-143061-1 (APN31040005M)

PAHs by EPA Method 8270C SIM

- Surrogate recoveries were outside control limits for all 16 PAH analytes analyzed in affected samples MRS03-APN31040005M-SS002, -SS003, -SS1001, and -SS2003. With the exception of acenaphthene, anthracene, dibenz(a,h)anthracene, and fluorene, in affected sample MRS03-APN31040005M-SS002 and -SS003 qualified using a "J"-flag, all other analytes were qualified using a "UJ"-flag in samples.

Synectics #280-143081-1

Lab Work Order# 280-143081-1 (Thomp A)

PAHs by EPA Method 8270C SIM

- MS RPD recovery was outside the control limit and trace level detect for 2-methylnaphthalene and naphthalene, qualified using a "J"-flag in affected sample MRS03-ThompA-SS003.
- Method blank was outside the control limit for benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(g,h,i)perylene, benzo(k)fluoranthene, chrysene, and indeno(1,2,3-cd)pyrene in affected samples MRS03-ThompA-SS001, -SS002, -SS003, -SS1001, and -SS1003 using a "J"-flag; for benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(g,h,i)perylene, benzo(k)fluoranthene, chrysene, fluoranthene, and indeno(1,2,3-cd)pyrene in affected sample MRS03-ThompA-SS1002 using a "J"-flag; benzo(a)pyrene, chrysene, fluoranthene, and pyrene in affected sample MRS03-ThompA-SS2001 using a "U"-flag and benzo(a)anthracene, benzo(b)fluoranthene, chrysene, fluoranthene, and pyrene affected samples MRS03-ThompA-SS2002 and -SS2003 using a "U"-flag.

Metals by EPA Method 6010B

- MS recovery was outside the control limit for antimony, qualified using a "UJ"-flag in affected sample MRS03-ThompA-SS001.
- MS RPD and lab triplicate RSD were outside the control limits for lead, qualified using a "J"-flag in affected sample MRS-ThompA-SS001.

Synectics #280-143100-1

Lab Work Order# 280-143100-1 (APN31040005N and APN31040005O)

PAHs by EPA Method 8270C SIM

- MS and MS RPD recoveries were outside control limits for all 16 PAH analytes analyzed (i.e., 2-methylnaphthalene, acenaphthene, anthracene, benzo(a)anthracene,

benzo(a)pyrene, benzo(b)fluoranthene, benzo(g,h,i)perylene, benzo(k)fluoranthene, chrysene, dibenz(a,h)anthracene, fluoranthene, fluorene, indeno(1,2,3-cd)pyrene, naphthalene, phenanthrene, and pyrene) in affected sample MRS03-APN31040005N-SS002. With the exception of benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(g,h,i)perylene, benzo(k)fluoranthene, chrysene, fluoranthene, indeno(1,2,3-cd)pyrene, phenanthrene, and pyrene were qualified using a "J"-flag (estimated), all other analytes were qualified using a "UJ"-flag (not detected estimated).

- Surrogate recoveries were outside control limits for all PAH analytes analyzed in affected samples MRS03-APN31038002O-SS001 and -SS002. With the exception of acenaphthene, anthracene, dibenz(a,h)anthracene, and fluorene in affected sample MRS03-APN310380020-SS001, and acenaphthene, benzo(g,h,i)perylene, dibenz(a,h)anthracene, and fluorene in affected sample MRS03-APN31038002O-SS002, were qualified using a "UJ"-flag, , all other analytes were qualified using a "J"-flag.

Metals by EPA Method 6010B

- MS and M2 recoveries were outside control limit for antimony qualified using a "UJ"-flag.
- MS recovery was outside control limit for antimony qualified using a "UJ"-flag for MRS03-APN31040005O-SS1001.

Synectics #280-143422-1

Lab Work Order# 280-143422-1 (Thomp O and Thomp P)

PAHs by EPA Method 8270C SIM

- Surrogate recoveries outside the limits for all PAHs in EB-12012020, were qualified using a "UJ"-flag.
- Surrogate recovery was outside project limit for 2-methylnaphthalene, acenaphthene, anthracene, dibenz(a,h)anthracene, fluoranthene, and naphthalene, qualified using a "J"-flag in affected sample MRS03-ThompO-SS002, and -SS003; acenaphthene, anthracene, benzo(g,h,i)perylene, benzo(k)fluoranthene, dibenz(a,h)anthracene, fluorene, and naphthalene, qualified using a "J"-flag in affected sample MRS03-ThompN-SS1002; for benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(g,h,i)perylene, benzo(k)fluoranthene, chrysene, dibenz(a,h)anthracene, fluoranthene, indeno(1,2,3-cd)pyrene, naphthalene, phenanthrene, and pyrene, qualified using a "J"-flag in affected sample MRS03-ThompO-SS1002.
- Surrogate recovery was outside project limit and trace level detect for 2-methylnaphthalene and fluorene, qualified using a "J"-flag in affected sample MRS03-ThompO-SS1001; and for 2-methylnaphthalene, qualified using a "J"-flag in affected sample MRS03-ThompO-SS1002; for 2-methylnaphthalene, acenaphthene, and fluorene, qualified using a "J"-flag in affected sample MRS03-ThompO-SS1003.

- MS RPD and surrogate recoveries were outside project limit for anthracene, benzo(a)pyrene, fluoranthene, and pyrene, qualified using a "J"-flag in affected sample MRS03-ThompO-SS1001.
- MS RPD, MS and surrogate recoveries were outside project limit for benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(g,h,i)perylene, benzo(k)fluoranthene chrysene, dibenz(a,h)anthracene, indeno(1,2,3-cd)pyrene, phenanthrene, and pyrene, qualified using a "J"-flag in affected sample MRS03-ThompO-SS1001.
- MS and surrogate recoveries and trace level detect for acenaphthene and naphthalene, qualified using a "J"-flag in affected sample MRS03-ThompO-SS1001.
- MS RPD recovery was outside for benzo(b)fluoranthene, qualified using a "J"-flag in affected sample MRS03-ThompO-SS1001.
- Surrogate recovery was outside project limit for acenaphthene, anthracene, dibenz(a,h)anthracene, fluoranthene, and naphthalene, qualified using a "J"-flag in affected sample MRS03-ThompP-SS001; for acenaphthene, anthracene, benzo(k)fluoranthene, dibenz(a,h)anthracene, naphthalene, and phenanthrene, qualified using a "J"-flag in affected sample MRS03-ThompP-SS003; for acenaphthene, anthracene benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(g,h,i)perylene, benzo(k)fluoranthene, chrysene, dibenz(a,h)anthracene, fluoranthene, indeno(1,2,3-cd)pyrene, naphthalene, phenanthrene, and pyrene, qualified using a "J"-flag in affected samples MRS03-ThompP-SS1001 through -SS1003; for anthracene, dibenz(a,h)anthracene, and fluorene, qualified using a "UJ"-flag samples MRS03-ThompP-SS2002; and for acenaphthene, anthracene, dibenz(a,h)anthracene, and fluorene, qualified using a "UJ"-flag in affected sample MRS03-ThompP-SS2003.
- Surrogate recovery was outside the project limit and trace level detect for 2-methylnaphthalene, qualified using a "J"-flag in affected sample MRS03-ThompP-SS001; for 2-methylnaphthalene and fluorene, qualified using a "J"-flag in affected samples MRS03-ThompP-SS003 and -SS1002; for 2-methylnaphthalene, acenaphthene, and fluorene, qualified using a "J"-flag in affected samples MRS03-ThompP-SS1001 and -SS1003; and for 2-methylnaphthalene, acenaphthene, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(g,h,i)perylene, benzo(k)fluoranthene, fluoranthene, indeno(1,2,3-cd)pyrene, naphthalene, phenanthrene, and pyrene, qualified using a "J"-flag in affected samples MRS03-ThompP-SS2002 and -SS2003.

<u>Metals by EPA Method 6010B</u>

- MS recovery was outside the project limit for antimony, qualified using a "UJ"-flag in affected sample MRS03-ThompO-SS1001.
- MS and M2 were outside the project limit for zinc, qualified using a "J"-flag in affected sample MRS03-ThompO-SS1001.

- MS recovery was outside the project limit for antimony, qualified using a "UJ"-flag in affected sample MRS03-ThompP-SS1001.
- MS and M2 were outside the project limit for zinc, qualified using a "J"-flag in affected sample MRS03-ThompP-SS1001.

Synectics #280-143489-1

Lab Work Order# 280-143489-1 (Thomp M)

PAHs by EPA Method 8270C SIM

- Surrogate recovery was outside the project limit for 2-methylnaphthalene, qualified using a "J"-flag in affected sample MRS03-ThompM-SS003.
- MS recovery was outside the control limit for anthracene and dibenz(a,h)anthracene in affected sample MRS03-ThompM-SS1001.
- MS and MS RPD recoveries were outside the control limit for naphthalene, qualified using a "J"-flag in affected sample MRS03-ThompM-SS1001.
- MS recovery was outside the control limit and trace detect for naphthalene, qualified using a "J"-flag in affected sample MRS03-ThompM-SS1001.

Synectics #280-143717-1

Lab Work Order# 280-143717-1 (Thomp J)

PAHs by EPA Method 8270C SIM

- Surrogate recovery was outside project limits for in 2-methylnaphthalene, acenaphthene, anthracene, fluorene, and naphthalene, qualified using a "J"-flag in affected sample MRS03-ThompJ-SS001; for anthracene, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(g,h,i)perylene, benzo(k)fluoranthene, chrysene, dibenz(a,h)anthracene, fluoranthene, indeno(1,2,3-cd)pyrene, phenanthrene, and pyrene, qualified using a "J"-flag in affected sample MRS03-ThompJ-SS2001; and for benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(g,h,i)perylene, benzo(k)fluoranthene, chrysene, fluoranthene, fluorene, phenanthrene, and pyrene, qualified using a "J"-flag, and fluorene, qualified using a "UJ"-flag, in affected sample MRS03-ThompJ-SS2003.
- Surrogate recovery and trace level detect for 2-methylnaphthalene, acenaphthene, fluorene, and naphthalene, qualified using a "J"-flag in affected sample MRS03-ThompJ-SS2001; and for 2-methylnaphthalene, acenaphthene, anthracene, dibenz(a,h)anthracene, and naphthalene, qualified using a "J"-flag in affected sample MRS03-ThompJ-SS2003.

Synectics #280-143881-1

Lab Work Order# 280-143881-1 (APN31038002-SS1003R and Thomp A)

PAHs by EPA Method 8270C SIM

- Method blank were outside the control limit for benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(g,h,i)perylene, benzo(k)fluoranthene, chrysene, fluoranthene, indeno(1,2,3-cd)pyrene, , and pyrene in affected sample MRS03-APN31038002J-SS1003R qualified using a "U"-flag, all analytes.
- MS RPD recovery was outside the control limit and trace level detect for 2-methylnaphthalene and naphthalene, qualified using a "J"-flag (detected) in affected sample MRS03-ThompA-SS003.
- Method blank was outside the control limit for benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(g,h,i)perylene, benzo(k)fluoranthene, chrysene, and indeno(1,2,3-cd)pyrene in affected samples MRS03-ThompA-SS001, -SS002, -SS003, -SS1001, and -SS1003 using a "J"-flag; for benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(g,h,i)perylene, benzo(k)fluoranthene, chrysene, fluoranthene, and indeno(1,2,3-cd)pyrene in affected sample MRS03-ThompA-SS1002 using a "J"-flag; benzo(a)pyrene, chrysene, fluoranthene, and pyrene in affected sample MRS03-ThompA-SS2001 using a "U"-flag (undetected); and benzo(a)anthracene, benzo(b)fluoranthene, chrysene, fluoranthene, and pyrene affected samples MRS03-ThompA-SS2002 and -SS2003 using a "U"-flag.

Metals by EPA Method 6010B

- MS recovery was outside the control limit for antimony, qualified using a "UJ"-flag (undetected estimated) in affected sample MRS03-ThompA-SS001.
- MS RPD and lab triplicate RSD were outside the control limits for lead, qualified using a "J"-flag in affected sample MRS-ThompA-SS001.

Synectics #280-144030-1

Lab Work Order# 280-144030-1 (Thomp C)

PAHs by EPA Method 8270C SIM

- MS RPD was outside project limit for benzo(a)anthracene, benzo(a)pyrene, benzo(g,h,i)perylene, chrysene, fluoranthene, indeno(1,2,3-cd)pyrene, and phenanthrene, qualified using a "J"-flag, in affected sample MRS03-ThompC-SS002.
- MS and MS RPD recoveries were outside project limit for benzo(b)fluoranthene, qualified using a "J"-flag in affected sample MRS03-ThompC-SS002.
- MS recovery and trace level detect for dibenz(a,h)anthracene, qualified using a "J"-flag in affected sample MRS03-ThompC-SS002.
- Method blank was outside the control limit for benzo(a)anthracene, chrysene, fluoranthene, and pyrene in affected sample MRS03-ThompC-SS2001 and qualified using a "U"-flag, and for fluoranthene in affected samples MRS03-ThompC-SS2002 and -SS2003.

Metals by EPA Method 6010B

- Lab replicate was outside control limit for lead, qualified using a "J"-flag in affected sample MRS03-ThompC-SS002.
- MS recovery was outside control limit for antimony, qualified using a "UJ"-flag in affected sample MRS03-ThompC-SS002.

Synectics #280-144038-1

Lab Work Order# 280-144038-1 (Thomp B)

PAHs by EPA Method 8270C SIM

- Surrogate recovery was outside the control limit for fluoranthene, in affected samples MRS03-AThompB-SS001, qualified a "J"-flag, for chrysene, fluoranthene, and pyrene, qualified a "U"-flag in affected sample MRS03-ThompB-SS2002, and for benzo(a)anthracene, chrysene, fluoranthene, and pyrene, qualified a "U"-flag in affected sample MRS03-ThompB-SS2003.

Synectics #280-144368-1

Lab Work Order# 280-144368-1 (Thomp D)

PAHs by EPA Method 8270C SIM

- Lab method blank detected naphthalene, phenanthrene, and pyrene in EB-01052021,qualified using "UJ"-flag.
- Surrogate recoveries outside the limits for PAHs in EB-01062021, were qualified using a "UJ"-flag. Surrogate recoveries outside the limits and method blank for naphthalene and pyrene in EB-01062021, were qualified using a "UJ"-flag.
- MS RPD was outside project limit for benzo(a)anthracene, benzo(g,h,i)perylene, benzo(k)fluoranthene, and indeno(1,2,3-cd)pyrene, qualified using a "J"-flag in affected sample MRS03-ThompD-SS1001.
- MS and MS RPD recoveries were outside control limit for benzo(a)pyrene, benzo(b)fluoranthene, chrysene, fluoranthene, and pyrene, qualified using a "J"-flag in affected sample MRS03-ThompD-SS1001.
- MS recovery and trace detect was outside control limit for phenanthrene, qualified using a "J"-flag in affected sample MRS03-ThompD-SS1001.
- Surrogate recovery was outside project limits for all PAHs in affected samples MRS03-ThompD-SS1002, -SS1003, -SS2001, and -SS2003. With exception of acenaphthene and fluorene in affected sample MRS03-ThompD-SS1002, qualified using a "UJ"-flag, all other analytes were qualified using a "J"-flag. With exception of fluorene in affected sample MRS03-ThompD-SS1003, qualified using a "UJ"-flag, all other analytes were qualified using a "J"-flag. With exception of 2-methylnaphthalene and naphthalene in affected sample MRS03-ThompD-SS2001, qualified using a "J"-flag, all other analytes were qualified using a "UJ"-flag. With exception of 2-methylnaphthalene, benzo(g,h,i)perylene, indeno(1,2,3-cd)pyrene, and naphthalene in affected sample

MRS03-ThompD-SS2003, qualified using a "J"-flag, all other analytes were qualified using a "UJ"-flag.

Synectics #280-144426-1

Lab Work Order# 280-144426-1 (Thomp J -SS3001 to -SS4003, Thomp K)

PAHs by EPA Method 8270C SIM

- MS recovery was outside the project limit for 2-methylnaphthalene, qualified using a "J"-flag in affected sample MRS03-ThompJ-SS3002.
- MS and MS RPD recoveries were outside the project limit for benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(g,h,i)perylene, benzo(k)fluoranthene, chrysene, fluoranthene, indeno(1,2,3-cd)pyrene, phenanthrene, and pyrene, qualified using a "J"-flag in affected sample MRS03-ThompJ-SS3002.
- MS and MS RPD recoveries were outside the project limit and trace level detect for naphthalene, qualified using a "J"-flag in affected sample MRS03-ThompJ-SS3002.
- MS RPD recovery was outside the project limit and trace level detect for anthracene and acenaphthene, qualified using a "J"-flag in affected sample MRS03-ThompJ-SS3002.
- Surrogate recovery was outside project limits for 2-methylnaphthalene, acenaphthene, anthracene, fluorene, and naphthalene, qualified using a "J"-flag, in affected samples MRS03-ThompK-SS001; for 2-methylnaphthalene, acenaphthene, fluorene, and naphthalene, qualified using a "J"-flag, in affected samples MRS03-ThompK-SS002, -SS1001, and -SS1002; for anthracene, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(g,h,i)perylene, benzo(k)fluoranthene, chrysene, dibenz(a,h)anthracene, fluoranthene, indeno(1,2,3-cd)pyrene, phenanthrene, and pyrene, qualified using a "J"-flag, in affected samples MRS03-ThompK-SS2001 and -SS2003; and for anthracene, benzo(g,h,i)perylene, benzo(k)fluoranthene, dibenz(a,h)anthracene, indeno(1,2,3-cd)pyrene, and phenanthrene, qualified using a "J"-flag, in in affected sample MRS03-ThompK-SS2002.
- Surrogate recovery and trace level detect for 2-methylnaphthalene, acenaphthene, fluorene, and naphthalene qualified using a "J"-flag, in affected samples MRS03-ThompK-SS2001 through -SS2003.
- MS RPD recovery was outside project limit for 2-methylnaphthalene, acenaphthene, anthracene, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(g,h,i)perylene, benzo(k)fluoranthene, chrysene, fluoranthene, indeno(1,2,3-cd)pyrene, phenanthrene, and pyrene, qualified using a "J"-flag in affected sample MRS03-ThompK-SS1003.
- MS and MS RPD recoveries were outside project limit for fluorene and naphthalene, qualified using a "J"-flag in affected sample MRS03-ThompK-SS1003.

Metals by EPA Method 6010B

- MS recovery was outside project limit for antimony, qualified using a "UJ"-flag, and for lead, qualified using a "J"-flag in affected sample MRS03-ThompJ-SS3002.
- Serial dilution for lead, qualified using a "J"-flag in affected sample MRS03-ThompL-SS1003.
- MS and M2 recoveries were outside project limit for antimony, qualified using a "UJ"-flag in affected sample MRS03-ThompK-SS1003.

Synectics #280-144656-1

Lab Work Order# 280-144656-1 (APN32404589)

PAHs by EPA Method 8270C SIM

- Surrogate recoveries outside the limits for PAHs in EB-01122021, were qualified using a "UJ"-flag. Trace detect of pyrene in EB-01122021 was qualified using a "J"-flag.
- LCS and MS recoveries were outside control limits and trace level detects for benzo(b)fluoranthene, benzo(g,h,i)perylene, benzo(k)fluoranthene, and indeno(1,2,3-cd)pyrene in affected sample MRS03-APN32404589-SS001 qualified using a "J"-flag for detected results.
- LCS recovery were outside control limits and trace level detects for benzo(b)fluoranthene, benzo(g,h,i)perylene, benzo(k)fluoranthene, and indeno(1,2,3-cd)pyrene in affected samples MRS03-APN32404589-SS002, -SS003, and -SS1001, qualified using a "J"-flag for detected results. LCS recovery were outside control for benzo(a)pyrene and dibenz(a,h)anthracene in affected samples MRS03-APN32404589-SS002, -SS003, and -SS1001, qualified using a "UJ"-flag for detected results.
- LCS recovery were outside control for benzo(a)pyrene and dibenz(a,h)anthracene in affected sample MRS03-APN32404589-SS001, -SS002, -SS003; benzo(g,h,i)perylene, benzo(k)fluoranthene, dibenz(a,h)anthracene, and indeno(1,2,3-cd)pyrene in affected samples MRS03-APN32404589-SS1001; benzo(a)pyrene, benzo(b)fluoranthene, benzo(g,h,i)perylene, benzo(k)fluoranthene, dibenz(a,h)anthracene, and indeno(1,2,3-cd)pyrene in affected samples MRS03-APN32404589-SS1002, -SS1003, and -SS2001, -SS2002, and -SS2003, qualified using a "UJ"-flag for detected results.

Metals by EPA Method 6010B

- MS and M2 recoveries were outside recovery limit for antimony in affected sample MRS03-APN32404589-SS001, qualified using a "UJ"-flag for detected results, and MS recovery was outside recoveries for copper and zinc, qualified using a "J"-flag for detected results.

Synectics #280-144714-1

Lab Work Order# 280-144714-1 (Thomp E)

PAHs by EPA Method 8270C SIM

- Surrogate recoveries outside the limits for PAHs in EB-01152021, were qualified using a "UJ"-flag. Trace detect of naphthalene in EB-01152021 was qualified using a "J"-flag.

- MS RPD was outside project limit for benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(g,h,i)perylene, benzo(k)fluoranthene, chrysene, fluoranthene, indeno(1,2,3-cd)pyrene, and pyrene, qualified using a "J"-flag in affected sample MRS03-ThompE-SS002.

- MS RPD and trace level detect was outside project limit for phenanthrene, qualified using a "J"-flag in affected sample MRS03-ThompE-SS002.

- Surrogate recovery was outside project limit for all 16 PAHs in affected samples MRS03-ThompE-SS2001, -SS2002, and -SS2003. With the exception of benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, chrysene, fluoranthene, and pyrene, qualified using a "J"-flag in affected samples MRS03-ThompE-SS2001 and -SS2002, all other analytes were qualified using a "U"-flag. With the exception of chrysene and naphthalene qualified using a "J"-flag in affected sample MRS03-ThompE-SS2003, all other analytes were qualified using a "U"-flag.

Metals by EPA Method 6010B

- MS recovery was outside control limit for antimony, qualified using a "UJ"-flag, and MS and M2 recoveries were outside control limit for zinc, qualified using a "J"-flag, in affected sample MRS03-ThompE-SS002.

Synectics #280-144869-1

Lab Work Order# 280-144869-1 (APN32404126)

PAHs by EPA Method 8270C SIM

- Surrogate recoveries and/or trace level detect and surrogate recoveries were outside control limits for all PAH 16 analytes analyzed in affected samples MRS03-APN32404126-SS001, -SS002, and –SS1001. With the exception of acenaphthene, anthracene, and dibenz(a,h)anthracene in sample MRS03-APN32404126-SS001, acenaphthene and anthracene in sample MRS03-APN APN32404126-SS002, and acenaphthene, anthracene, benzo(g,h,i)perylene, benzo(k)fluoranthene, and dibenz(a,h)anthracene, in sample MRS03-APN32404126-SS1001 qualified using a "UJ"-flag for detected results, all other analytes were qualified using a "J"-flag.

Synectics #280-144870-1

Lab Work Order# 280-144870-1 (APN32404131)

Metals by EPA Method 6010B

Synectics #280-144900-1

Lab Work Order# 280-144900-1 (Thomp F)

PAHs by EPA Method 8270C SIM

- LCS recovery for acenaphthene, benzo(a)anthracene, benzo(a)pyrene, chrysene, fluoranthene, and phenanthrene qualified using a 'UJ"-flag, were outside project limits for EB-01212021 and EB01222021.
- MS and MSD recovery for acenaphthene, anthracene, benzo(k)fluoranthene, and phenanthrene, qualified using a "J"-flag for antimony and using a "J"-flag in affected sample MRS03-ThompF-SS001.
- MS RPD recovery was outside control limit for benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(g,h,i)perylene, chrysene, fluoranthene, indeno(1,2,3-cd)pyrene, and pyrene, qualified using a "J"-flag for antimony and using a "J"-flag in affected sample MRS03-ThompF-SS001.
- Surrogate recovery was outside the control limit for benzo(a)pyrene, benzo(b)fluoranthene, chrysene, fluoranthene, and pyrene, qualified using a "J"-flag in affected sample MRS03-ThompF-SS002 and -SS003; and acenaphthene, anthracene, benzo(g,h,i)perylene, benzo(k)fluoranthene, dibenz(a,h)anthracene, fluorene, and phenanthrene, qualified using a "UJ"-flag in affected sample MRS03-ThompF-SS2003.
- Surrogate recovery and trace detect was outside the control limit for benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, chrysene, fluoranthene, indeno(1,2,3-cd)pyrene, and pyrene, qualified using a "J"-flag in affected sample MRS03-ThompF-SS2003.
- Method blank was outside the control limit for naphthalene, qualified using a "U"-flag in affected sample MRS03-ThompF-SS002, -SS1001, -SS1002, -SS1003, -SS2001, and -SS2002.
- Method blank and surrogate recovery was outside the control limit for naphthalene, qualified using a "UJ"-flag in affected sample MRS03-ThompF-SS2003.

Metals by EPA Method 6010B

- MS recovery was outside control limit for zinc qualified using a "J"-flag, and MS and M2 recoveries were outside control limit for antimony, qualified using a "J"-flag, in affected sample MRS03-ThompF-SS001.

Synectics #280-145283-1

Lab Work Order# 280-145283-1 (APN32436017)

PAHs by EPA Method 8270C SIM

- Surrogate recoveries were outside control limits for 2-methylnaphthalene and fluorene and fluoranthene qualified using a "J"-flag for detected results, in affected sample MRS03-APN32436017-SS001.

Synectics #280-145284-1

Lab Work Order# 280-145284-1 (Thomp M -SS3001-SS4003)

PAHs by EPA Method 8270C SIM

- Surrogate recovery was outside the project limit for benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(g,h,i)perylene, benzo(k)fluoranthene, fluoranthene, fluorene, indeno(1,2,3-cd)pyrene, phenanthrene, and pyrene, qualified using a "J"-flag in affected sample MRS03-ThompM-SS3001.
- Surrogate recovery was outside the project limit and trace level detect for 2-methylnaphthalene, acenaphthene, anthracene, dibenz(a,h)anthracene, naphthalene, qualified using a "J"-flag in affected sample MRS03-ThompM-SS3001; for anthracene and naphthalene, qualified using a "J"-flag in affected sample MRS03-ThompM-SS3001; for naphthalene, qualified using a "J"-flag in affected sample MRS03-ThompM-SS4001.

Metals by EPA Method 6010B

- MS recovery was outside the control limit for antimony, qualified using a "UJ"-flag in affected sample MRS03-ThompM-SS4001.

Synectics #280-145325-1

Lab Work Order# 280-145325-1 (APN32405106)

PAHs by EPA Method 8270C SIM

- Surrogate recovery was outside control limits for 2-methylnaphthalene, acenaphthene, anthracene, benzo(a)anthracene, benzo(g,h,i)perylene, benzo(k)fluoranthene, dibenz(a,h)anthracene, fluorene, indeno(1,2,3-cd)pyrene, and phenanthrene qualified using a "UJ"-flag (undetected estimated) in affected sample MRS03-APN32405106-SS1001; and acenaphthene, anthracene, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(g,h,i)perylene, benzo(k)fluoranthene, chrysene, dibenz(a,h)anthracene, fluoranthene, fluorene, indeno(1,2,3-cd)pyrene, phenanthrene, and pyrene, qualified using a "UJ"-flag in affected sample MRS03-APN32405106-SS2001.
- Surrogate recovery was outside control limits and trace level detects for benzo(a)pyrene, benzo(b)fluoranthene, chrysene, fluoranthene, naphthalene, and pyrene, qualified using a "J"-flag (estimated) in affected sample MRS03-APN32405106-SS1001; and 2-methylnaphthalene and naphthalene qualified using a "J"-flag in affected sample MRS03-APN32405106-SS2001.
- Surrogate recovery was outside the control limit for benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(g,h,i)perylene, benzo(k)fluoranthene, chrysene,

fluoranthene, fluorene, indeno(1,2,3-cd)pyrene, phenanthrene, and pyrene, qualified using a "J"-flag, and acenaphthene and fluorene, qualified using a "UJ"-flag in affected sample MRS03-APN32405107-SS001; and for acenaphthene, anthracene, dibenz(a,h)anthracene, fluorene, and phenanthrene, qualified using a "UJ"-flag in affected sample MRS03-APN32405107-SS1003.

- Surrogate recoveries were outside control limits and trace level detect for 2-methylnaphthalene, anthracene, dibenz(a,h)anthracene, and naphthalene, qualified using a "J"-flag in affected sample MRS03-APN32405107-SS001; and 2-methylnaphthalene, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(g,h,i)perylene, benzo(k)fluoranthene, chrysene, fluoranthene, indeno(1,2,3-cd)pyrene, naphthalene, and pyrene, qualified using a "J"-flag in affected sample MRS03-APN32405107-SS1003.
- MS recovery was outside the control limit for lead, qualified using a "J"-flag, and for antimony, qualified using a "UJ"-flag in affected sample MRS03-APN32405107-SS1003. MS and Post spike recovery were outside the control limit for zinc, qualified using a "J"-flag in in affected sample MRS03-APN32405107-SS1003.

Synectics #280-145479-1

Lab Work Order# 280-145479-1 (Thomp G, APN32404194, APN32436030, APN32439038)

PAHs by EPA Method 8270C SIM

- Surrogate recoveries outside the limits for all PAHs in EB-02102021, were qualified using a "UJ"-flag. Surrogate recoveries and trace detect of benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, and pyrene in EB-02122021 was qualified using a "J"-flag. Surrogate and LCS recoveries and RPD values and trace detection of benzo(g,h,i)perylene and dibenz(a,h)anthracene in EB-02122021 was qualified using a "J"-flag.
- Method blank was outside the control limit for naphthalene, qualified using a "U"-flag in affected sample MRS03-ThompG-SS001, -SS002, -SS003, -SS1001, -SS1002, -SS1003, -SS2001, -SS2002, and -SS2002.
- Surrogate recoveries were outside control limits for all PAH 16 analytes analyzed (i.e., 2-methylnaphthalene, acenaphthene, anthracene, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(g,h,i)perylene, benzo(k)fluoranthene, chrysene, dibenz(a,h)anthracene, fluoranthene, fluorene, indeno(1,2,3-cd)pyrene, naphthalene, phenanthrene, and pyrene) in affected samples MRS03-APN324-04-94-SS1002. With the exception of 2-methylnaphthalene, benzo(a)pyrene, and fluoranthene in sample MRS03-APN32404194-SS1002, qualified using a "J"-flag for detected results, all other analytes were qualified using a "UJ"-flag.
- Method blank was outside the control limit for naphthalene, qualified using a "U"-flag in affected samples MRS03-APN32404194-SS001, -SS002, -SS003, -SS1001, -SS1002, -SS1003, -SS2001, and -SS2003.

- MS recovery was outside control limit for antimony, qualified "UJ" and zinc, qualified using a "J" in affected sample MRS03-APN32436030-SS2001.

Synectics #280-145601-1

Lab Work Order# 280-145601-1 (Thomp K-SS3001 – SS4003, APN32436028)

- LCS recovery for benzo(g,h,i)perylene and indeno(1,2,3-cd)pyrene qualified using a 'UJ"-flag, were outside project limits for EB-02172021A and EB-02172021B.

Metals by EPA Method 6010B

- MS recovery were outside control limit for benzo(a)anthracene, benzo(b)fluoranthene, chrysene, fluoranthene, and pyrene, qualified using "J"-flag in affected sample MRS03-APN32436028-SS1002.
- MS recovery was outside control limit for antimony, qualified using "UJ"-flag in affected sample MRS03-APN32436028-SS1002.

Synectics #280-145687-1

Lab Work Order# 280-145687-1 (APN32405166A)

- Sample EB-02182021 was prepared outside of preparation holding time. Sample results were qualified using "UJ".

Metals by EPA Method 6010B

- MS recovery was outside the control limit for zinc, qualified as "J"-flag and antimony, qualified at "UJ"-flag in affected sample MRS03-APN32405166A-SS1001.
- Method blank was outside the control limit for copper, qualified as "U"-flag in affected samples MRS03-APN32405166A-SS1001, -SS1002, and -SS2001 through -SS2003.

Synectics #280-145689-1

Lab Work Order# 280-145689-1 (Thomp I)

- Sample EB-02192021 was prepared outside of preparation holding time. Sample results were qualified using "UJ".

Metals by EPA Method 6010B

- Lab detect was outside the project limit for copper, qualified using a "U"-flag in affected samples MRS03-ThompI-SS1001, and 2001 through 2003.

Synectics #280-145809-1

Lab Work Order# 280-145809-1 (APN32404588)

- RPD values and trace detection of naphthalene in EB-02252021 were qualified using a "J".

Metals by EPA Method 6010B

- MS recovery was outside control limits for antimony, qualified using a "UJ"-flag in affected sample MRS03-APN32404588-SS1002.
- MS and M2 recoveries were outside for lead, qualified using a "J"-flag in affected sample MRS03-APN32404588-SS1002.

Synectics #280-145850-1

Lab Work Order# 280-145850-1 (Thomp H)

- RPD values and trace detection of phenanthrene in sample EB-02262021 were qualified using a "J".

PAHs by EPA Method 8270C SIM

- MS RPD recovery was outside the project limit for anthracene, benzo(a)anthracene, benzo(a)pyrene, benzo(k)fluoranthene, chrysene, fluoranthene, phenanthrene, and pyrene, qualified using a "J"-flag in affected sample MRS03-ThompH-SS002.

Metals by EPA Method 6010B

- Lab replicate RPD recovery was outside the project limit for lead, qualified using a "J"-flag in affected sample MRS03-ThompH-SS002.
- Lab replicate RPD and MS recoveries were outside the project limit for zinc, qualified using a "J"-flag in affected sample MRS03-ThompH-SS002.
- MS recovery was outside the project limit for antimony, qualified using a "UJ"-flag in affected sample MRS03-ThompH-SS002.

Synectics #280-146043-1

Lab Work Order# 280-146043-1 (Thomp M-SS5001 – SS6003)

PAHs by EPA Method 8270C SIM

- Surrogate recovery was outside the project limit for 2-methylnaphthalene, acenaphthene, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(g,h,i)perylene, benzo(k)fluoranthene, chrysene, dibenz(a,h)anthracene, fluoranthene, fluorene, indeno(1,2,3-cd)pyrene, phenanthrene, and pyrene, qualified using a "J"-flag in affected sample MRS03-ThompM-SS5002.
- MS and MS RPD recoveries were outside the control limit for naphthalene, qualified using a "J"-flag in affected sample MRS03-ThompM-SS1001; and for benzo(a)pyrene and

benzo(b)fluoranthene, qualified using a "J"-flag in affected sample MRS03-ThompM-SS6002.

- MS, MS RPD recoveries were outside the control limit and trace level detect for naphthalene was qualified using a "J"-flag in affected sample MRS03-ThompM-SS6002.
- MS RPD recovery was outside the control limit and trace detect for dibenz(a,h)anthracene in affected sample MRS03-ThompM-SS6002.
- MS RPD recovery was outside the control limit for benzo(a)anthracene, benzo(g,h,i)perylene, benzo(k)fluoranthene, chrysene, fluoranthene, indeno(1,2,3-cd)pyrene, and pyrene, qualified using a "J"-flag in affected sample MRS03-ThompM-SS6002.

Metals by EPA Method 6010B

- MS and M2 recoveries were outside the control limit for antimony, qualified using a "UJ"-flag in affected sample MRS03-ThompM-SS6002.

Synectics #280-146074-1

Lab Work Order# 280-146074-1 (Thomp L-SS3001 – SS4003)

PAHs by EPA Method 8270C SIM

- Surrogate recoveries were outside the project limit for acenaphthene, anthracene, fluoranthene, and naphthalene, qualified using a "J"-flag in affected sample MRS03-ThompL-SS2001.

Metals by EPA Method 6010B

- MS and post spike recoveries were outside the project limit for antimony, qualified using a "J"-flag in affected sample MRS03-ThompL-SS1001.

Synectics #280-146092-1

Lab Work Order# 280-146092-1 (Thomp J-SS3001 – SS4003)

- Surrogate recoveries were outside the limits for all PAHs qualified using a "UJ"-flag analyzed with exception of naphthalene in EB-03022021. Surrogate recovery were outside the limits and method blank for naphthalene, qualified using a "UJ"-flag.

PAHs by EPA Method 8270C SIM

- MS recovery was outside the project limit for 2-methylnaphthalene, qualified using a "J"-flag in affected sample MRS03-ThompJ-SS3002.
- MS and MS RPD recoveries were outside the project limit for benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(g,h,i)perylene, benzo(k)fluoranthene,

chrysene, fluoranthene, indeno(1,2,3-cd)pyrene, phenanthrene, and pyrene, qualified using a "J"-flag in affected sample MRS03-ThompJ-SS3002.

- MS and MS RPD recoveries were outside the project limit and trace level detect for naphthalene, qualified using a "J"-flag in affected sample MRS03-ThompJ-SS3002.
- MS RPD recovery was outside the project limit and trace level detect for anthracene and acenaphthene, qualified using a "J"-flag in affected sample MRS03-ThompJ-SS3002.

Metals by EPA Method 6010B

- MS recovery was outside project limit for antimony, qualified using a "UJ"-flag, and for lead, qualified using a "J"-flag in affected sample MRS03-ThompJ-SS3002.

Synectics #280-146287-1

Lab Work Order# 280-146287-1 (Thomp K-SS5001 – SS6003)

PAHs by EPA Method 8270C SIM

- MS and MS RPD recoveries were outside project limit for fluorene and naphthalene, qualified using a "J"-flag in affected sample MRS03-ThompK-SS1003; and for benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(g,h,i)perylene, benzo(k)fluoranthene, chrysene, indeno(1,2,3-cd)pyrene, phenanthrene, and pyrene, qualified using a "J"-flag in affected sample MRS03-ThompK-SS5003.
- MS and MS RPD recoveries were outside project limit and trace level detect for anthracene and dibenz(a,h)anthracene, qualified using a "J"-flag in affected sample MRS03-ThompK-SS5003.

Metals by EPA Method 6010B

- Serial dilution for lead, qualified using a "J"-flag in affected sample MRS03-ThompK-SS1003.
- MS and M2 recoveries were outside project limit for antimony, qualified using a "UJ"-flag in affected sample MRS03-ThompK-SS6003.
- MS recovery was outside the project limit for zinc, qualified using a "J"-flag in affected sample MRS03-ThompK-SS6003.

Synectics #280-146295-1

Lab Work Order# 280-146295-1 (APN 32404152_153, APN32404549A)

Metals by EPA Method 6010B

- Method blank detect of copper, qualified using a "U"-flag in affected samples MRS03-APN32404152_153-SS2001 and -SS2003.
- MS recovery was outside the control limit for antimony, qualified using a "UJ"-flag in affected sample MRS03-APN32404152_153-SS2003.

- MS recovery and post spike recovery were outside the control limit for zinc, qualified using a "J"-flag in affected samples MRS03-APN32404152_153-SS2003.

- Interference check were outside control limit for benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(g,h,i)perylene, benzo(k)fluoranthene, chrysene, fluoranthene, indeno(1,2,3-cd)pyrene, and pyrene, qualified using a "J"-flag (estimated) in affected sample MRS03-APN32404549A-SS002; and 2-methylnaphthalene, acenaphthene, anthracene, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(g,h,i)perylene, benzo(k)fluoranthene, chrysene, dibenz(a,h)anthracene, fluoranthene, fluorene, indeno(1,2,3-cd)pyrene, phenanthrene, and pyrene, qualified using a "UJ"-flag (undetected estimated) in affected sample MRS03-APN32404549A-SS2001.

- Interference check outside control limit and trace level detect for 2-methylnaphthalene, acenaphthene, anthracene, benzo(k)fluoranthene, dibenz(a,h)anthracene, fluorene, naphthalene, and phenanthrene, qualified using a "J"-flag in affected sample MRS03-APN32404549A-SS002; and for naphthalene, qualified using a "J"-flag (estimated) in affected sample MRS03-APN32404549A-SS2001.

Synectics #280-146991-1

Lab Work Order# 280-146991-1 (APN 32436017-SS3001-SS4003)

PAHs by EPA Method 8270C SIM

- Surrogate recoveries were outside the limits for all PAHs, qualified using a "UJ"-flag in EB-03312021.

- Surrogate recoveries were outside control limits for 2-methylnaphthalene and fluorene and fluoranthene qualified using a "J"-flag for detected results, in affected sample MRS03-APN32436017-SS001.

Synectics #280-146993-1

Lab Work Order# 280-146993-1 (APN32404082B)

Metals by EPA Method 6010B

- MS recovery was outside control limits for antimony, qualified using "UJ"-flag in affected sample MRS03-APN32404082B-SS1002.

Synectics #280-147003-1

Lab Work Order# 280-147003-1 (ThompL-SS5001-SS6003)

- Holding time was outside limits for sample EB-04022021.

PAHs by EPA Method 8270C SIM

- Surrogate recoveries were outside the project limit for acenaphthene, anthracene, fluoranthene, and naphthalene, qualified using a "J"-flag in affected sample MRS03-ThompL-SS2001.
- Trace level detect for 2-methylnaphthalene, qualified using a "J"-flag in affected sample MRS03-ThompL-SS5001; for 2-methylnaphthalene and fluorene, and naphthalene, qualified using a "J"-flag in affected sample MRS03-ThompL-SS5002; for 2-methylnaphthalene, acenaphthene, fluorene, and naphthalene qualified using a "J"-flag in affected sample MRS03-ThompL-SS6002; and for 2-methylnaphthalene and fluorene, qualified using a "J"-flag in affected sample MRS03-ThompL-SS6003.
- MS recovery was outside the project limit for benzo(a)pyrene, benzo(b)fluoranthene, fluoranthene, and pyrene, qualified using a "J"-flag in affected sample MRS03-ThompL-SS6001.
- MS and MS RPD recoveries were outside the project limit for anthracene, benzo(a)anthracene, benzo(g,h,i)perylene, benzo(k)fluoranthene, chrysene, dibenz(a,h)anthracene, indeno(1,2,3-cd)pyrene, and phenanthrene, qualified using a "J"-flag in affected sample MRS03-ThompL-SS6001.
- MS and MS RPD recoveries and trace level detect for 2-methylnaphthalene, acenaphthene, fluorene, and naphthalene qualified using a "J"-flag in affected sample MRS03-ThompL-SS6001.

Metals by EPA Method 6010B

- MS and M2 recoveries were outside the project limit for antimony, qualified using a "J"-flag in affected sample MRS03-ThompL-SS1001, and qualified using a "UJ"-flag in affected sample MRS03-ThompL-SS6001.

Synectics #280-147276-1

Lab Work Order# 280-147276-1 (APN32427024)

PAHs by EPA Method 8270C SIM

- Sample receipt temperature was outside the project limit for 2-methylnaphthalene, acenaphthene, anthracene, benzo(k)fluoranthene, dibenz(a,h)anthracene, fluorene, indeno(1,2,3-cd)pyrene, naphthalene, and phenanthrene, qualified using a "UJ"-flag in affected samples MRS03-APN32427024-SS001.
- Sample receipt temperature was outside the project limit and trace level detect for benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(g,h,i)perylene, chrysene, dibenz(a,h)anthracene, fluoranthene, and pyrene, qualified using a "J"-flag in affected samples MRS03-APN32427024-SS001.

- Surrogate recovery was outside the project limit and trace level detect for 2-methylnaphthalene, acenaphthene, anthracene, dibenz(a,h)anthracene, fluorene, naphthalene, qualified using a "UJ"-flag in affected samples MRS03-APN32427024-SS002; for 2-methylnaphthalene, acenaphthene, anthracene, dibenz(a,h)anthracene, fluorene, indeno(1,2,3-cd)pyrene, naphthalene, phenanthrene, and pyrene, qualified using a "UJ"-flag in affected sample MRS03-APN32427024-SS003; for 2-methylnaphthalene, acenaphthene, anthracene, benzo(g,h,i)perylene, benz(a,h)anthracene, fluorene, indeno(1,2,3-cd)pyrene, and naphthalene, qualified using a "UJ"-flag (estimated) in affected sample MRS03-APN32427024-SS1001; for 2-methylnaphthalene, acenaphthene, anthracene, benzo(k)fluoranthene, dibenz(a,h)anthracene, fluorene, naphthalene, and phenanthrene, qualified using a "UJ"-flag in affected sample MRS03-APN32427024-SS1002; for all 16 PAHs, qualified using a "UJ"-flag in affected samples MRS03-APN32427024-SS1003,-SS2001; and -SS2003; and for -methylnaphthalene, acenaphthene, anthracene, fluorene, and phenanthrene, qualified using a "UJ"-flag in affected sample MRS03-APN32427024-SS002.
- Surrogate recovery and sample receipt temperature was outside the project limit, and and trace level detect for benzo(a)anthracene, benzo(b)fluoranthene, benzo(g,h,i)perylene, benzo(k)fluoranthene, chrysene, fluoranthene, indeno(1,2,3-cd)pyrene, phenanthrene, and pyrene, qualified using a "J"-flag in affected sample MRS03-APN32427024-SS002; for benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(g,h,i)perylene, benzo(k)fluoranthene, chrysene, and fluoranthene, qualified using a "J"-flag in affected samples MRS03-APN32427024-SS003; for benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, chrysene, fluoranthene, phenanthrene, and pyrene, qualified using a "J"-flag in affected sample MRS03-APN32427024-SS1001; for benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(g,h,i)perylene, chrysene, fluoranthene, indeno(1,2,3-cd)pyrene, and pyrene, qualified using a "J"-flag in affected sample MRS03-APN32427024-SS1002; and for benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(g,h,i)perylene, benzo(k)fluoranthene, chrysene, dibenz(a,h)anthracene, fluoranthene, indeno(1,2,3-cd)pyrene, naphthalene, and pyrene, qualified using a "J"-flag in affected sample MRS03-APN32427024-SS2001.

<u>Metals by EPA Method 6010B</u>

- Sample receipt temperature was outside the project limit for antimony, qualified using a "UJ"-flag, in affected samples MRS03-APN32427024-SS001 through -SS003, and SS1001, and for copper, lead, and zinc, qualified using a "J"-flag in affected samples MRS03-APN32427024-SS001 through -SS003, -SS1001 through -SS1003, and -SS2001 through -SS2003.
- MS recovery and sample receipt temperature was outside the project limit for antimony, qualified using a "UJ"-flag, in affected samples MRS03-APN32427024-SS1002, -SS1003, and -SS2001 through -SS2003.

Synectics #280-147317-1

Lab Work Order# 280-147317-1 (APN32404663A, Thomp J-SS5001-SS6003)

- Sample EB-04062021 was received outside of the holding time due to commercial carrier shipping delay.

PAHs by EPA Method 8270C SIM

- MS recovery was outside the control limit for acenaphthene and fluorene, qualified using a "UJ"-flag in affected sample MRS03-APN32404663A-SS2003.
- MS RPD recovery was outside the control limit and trace level detect for benzo(a)anthracene, benzo(b)fluoranthene, chrysene, fluoranthene, and pyrene, qualified using a "UJ"-flag in affected sample MRS03-APN32404663A-SS2003.
- MS and MS RPD recoveries were outside the control limit and trace level detect for naphthalene, qualified using a "UJ"-flag in affected sample MRS03-APN32404663A-SS2003.

Metals by EPA Method 6010B

- MS and M2 recoveries were outside the control limit for antimony, qualified using a "UJ"-flag and lead, qualified using a "J"-flag, in affected sample MRS03-APN32404663A-SS2003.

B5.0 DATA VALIDATION RESULTS

Analytical data collected at the Former Skeet Range MRS03, Kingman GTG Gunnery Range remedial investigation activities were reviewed and validated by Synectics in Sacramento, California. Data validation was conducted in accordance with *Quality Systems Manual for Environmental Laboratories, version 5.1* (DoD, 2017), DoD *General Data Validation Guidelines* (DoD, 2018a), DoD *Data Validation Guidelines Module 1: Data Validation Procedure for Organic Analysis by GC/MS (SW-846 8260, 8270)* (DoD, 2018b), and laboratory method blank data evaluation for metals analysis based on the DoD *Module 2: Data Validation Procedure for Metals by ICP-OES (SW-846 6010)* (DoD, 2018c), and the QA/QC criteria specified in the Final QAPP Addendum (NOREAS, 2018), Field Change Form Request (FCRF)-001 (NOREAS, 2019a), and FCRF-002 (NOREAS, 2019b).

This assessment has been made through a combination of automated data review (ADR) and supplemental manual review. Data were subjected to a combination of 90 percent Stage 3 Validation Electronic and Manual (S3VEM) and 10 percent Stage 4 Validation Electronic and Manual (S4VEM), involving manual re-quantifications and recalculations from instrument output. Hard copy data summary forms have also been reviewed and compared to the automated review output during validation. Additional manual review was implemented to supplement the ADR review to achieve a higher-level validation of Stage 3. Data validation included a review of sample preservation/condition, cooler temperature, verification of analytes, methods, quantitation, reporting limits, and technical holding times; gas chromatography/mass spectrometer (GC/MS) instrument tune, initial and continuing calibration verifications; laboratory blanks; ICP Interference Check Samples (metals), surrogates, LCS and MS/MSD; and field QC sample data (as applicable). In addition, field sampling records were reviewed to assess the potential for any field conditions that adversely impact data quality. Relevant data validation qualifiers applied during data validation are defined as follows:

- U (Undetected) – The analyte was analyzed for, but not detected.
- UJ - The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.
- J (Estimated) – Estimated: The analyte was positively identified; the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria
- R - The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.

With the exception of five analytes qualified with “R”, as identified in Section 4.0, third-party validation reports indicated that data associated with samples collected during the soil sampling from January 2020 through April 2021 are usable and acceptable with the appropriate data qualifiers. Overall precision and accuracy goals identified in the project Final QAPP Addendum

were met. The analytical results and associated data validation qualifiers associated with the QC excursions are provided for key constituents of concern in Section C4.0 and in Tables 6-4 through 6-6 in the Remedial Investigation Addendum. The majority of the QC excursions were related to matrix interference caused by soil samples, laboratory blank artifacts, laboratory control standard exceedances caused by poor performing analytes. Holding time exceedances were minimal and related to unforeseen laboratory processing limitations. As the source of the contaminants of concern are from solid-phase skeet particles and shot pellets, potential volatilization losses from holding time exceedances are not considered to significantly affect data usability. Copies of the analytical laboratory reports, including CoC forms and data validation reports, are provided in Attachment 1 as a part of the parcel reports.

Data validation reported recoveries were outside the project acceptance limits in three parcels sampled. Samples for APN 324-37-019-SS002 for 2-methylnaphthalene, fluorene, and naphthalene, and APN 324-04-131-SS2001 and APN 324-36-030-SS2001 for antimony, resulted in the rejection of data in five sample points. Surrogate recoveries were outside the project limit for 2-methylnaphthalene, fluorene, and naphthalene. The anomaly for antimony is likely related to the limitations in the digestion procedure used for ICP analysis coupled with sample matrix effect resulting in lower antimony recoveries in matrix spike sample analysis. As 2-methylnaphthalene, fluorene, and naphthalene antimony are not considered primary risk-drivers for the Site, this data quality issue should not impact remediation decisions for the Site. However, rejected data were not used for decision making purposes.

Overall, project data quality objectives were met, and the data were deemed acceptable. A total of 5 data out of the 16,680 data points (sample, field QC samples and resampled 2019 parcels[2]) reported are qualified rejected (0.03%), a Data Quality Objective (DQO) of 99.97% acceptance rate.. Trace values, defined as results that are qualified as estimated because they fall between the detection limit and the limit of quantitation, are not counted as qualified results in the above count.

Analytical results are presented in Tables 6-4 through 6-6 in the RI Addendum Report. The chain-of-custody records, laboratory analytical results, and data validation reports including Data Review Checklists are provided as a part of the parcel reports in Attachment 1.

[2] Seven parcels (APN 324-04-558, APN 324-04-668, APN 324-05-265, APN 324-05-267, APN 324-37-017, APN 324-39-020, and APN 324-05-263A) with rejected data from 2019 RI sampling activities, were resampled during the RI Addendum.
