

# RECYCLING TIPS

## EDUCATE, DON'T CONTAMINATE!

### BATTERIES

Batteries are toxic to the environment and contain corrosive materials.

Recycled batteries can be reused to:

- ⚡ make new products
- ⚡ less materials going into landfills
- ⚡ conserve natural resources
- ⚡ used to produce energy

THEY CONTAIN MATERIALS SUCH AS:

Zinc

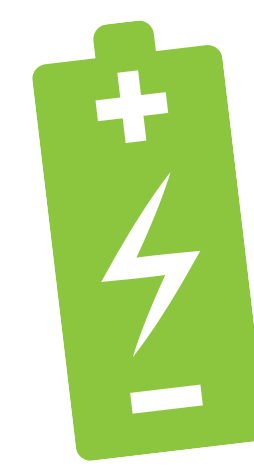

Steel

Manganese

These materials can be recycled for other use

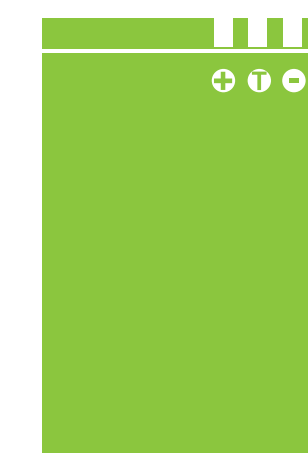

TYPES OF BATTERIES TO RECYCLE:

Alkaline

Button

Lithium

Nickel Cadmium

### DO NOT PLACE BATTERIES IN THE BLUE RECYCLING BINS!

Recycling bins are available in all break rooms to take your dry cell batteries! Lithium batteries should be either taped or placed individually in a plastic baggie.

Find out more about recycling. Visit [azdeq.gov/recycling](http://azdeq.gov/recycling)
