<sup>1</sup>Potential Total Points

**A. RELEASE EVENT (10 Points)**

If contaminants are present in the groundwater, surface water, or soil, score a known release to the appropriate media. If there is no release to groundwater, surface water, or soil, the remainder of the form should not be completed.

**1. SOIL (3 Points)**

**TOTAL SOIL SCORE (A.1):**   3  

Please use the following table:

<u><i>Type of Release</i></u>	<u><i>Soil Score</i></u>
<i>Known</i>	3
<i>Unknown</i>	1
<i>None</i>	0

**2. GROUNDWATER (4 Points)**

**TOTAL GROUNDWATER SCORE (A.2):**   4  

Please use the following table:

<u><i>Type of Release</i></u>	<u><i>Groundwater Score</i></u>
<i>Known</i>	4
<i>Unknown</i>	2
<i>None</i>	0

**3. SURFACE WATER (3 Points)**

**TOTAL SURFACE WATER SCORE (A.3):**   0  

Please use the following table:

<u><i>Type of Release</i></u>	<u><i>Surface Water Score</i></u>
<i>Known</i>	3
<i>Unknown</i>	1
<i>None</i>	0

**Total Release Event Score = A.1 + A.2 + A.3:**   7

**B. SITE AND CONTAMINANT CHARACTERISTICS (30 Points)**

**1. CONTAMINANT SPECIFIC (15 Points)**

**a. Contaminant Hazard**

**TOTAL SCORE:   3**

Contaminant hazard is the ratio (R) of the contaminant concentration to the benchmark for the substance.

*For Groundwater:*  $R = C / \text{Drinking Water HBGL}$

*For Surface Water:*  $R = C / \text{Drinking Water HBGL}$

*For Soil:*  $R = C / \text{Residential HBGL}$

Determine a score for each of the three media as follows: First, determine the highest possible value of R for each substance; then add the R values together. Then add together the R values for the three media (groundwater, surface water, and soil). Finally, choose the highest score from the following table:

<u>R Value</u>	<u>Score</u>
$R < 1$	<b>0</b>
$1 < R < 10$	<b>1</b>
$10 < R < 100$	<b>2</b>
$100 < R < 1,000$	<b>3</b>
$1,000 < R < 10,000$	<b>4</b>
$10,000 < R$	<b>5</b>

**b. Extent of Contamination**

**TOTAL SCORE:   4**

What is the extent of release of the hazardous substance? Use the quantity that yields the highest score. Please use the following table.

<u>Soil Volume (Cubic Yards)</u>	<u>Groundwater (No. of Wells<sup>1</sup>)</u>	<u>Rivers/Streams (Miles)</u>	<u>Lakes (Surface Acreage)</u>	<u>SCORE</u>
>1,000	> 15	> 1.0	> 100	<b>4</b>

10—100	5—9	0.2—0.5	5—25	<b>2</b>
< 10	1—4	< 0.2	< 5	<b>1</b>
Unknown	Unknown	Unknown	Unknown	<b>0</b>

<sup>1</sup> Production wells only

**c. Mobility**

**TOTAL SCORE:   3**

The Groundwater Protection Levels (GPLs) are used as a measure of mobility, and onsite soil concentrations (C) will be compared to the GPL. If site-specific data is available, then the GPL will be calculated using the ADEQ model. If site-specific data is not available, then the minimum GPL will be used. Choose the highest score from the following table:

<u>Criteria</u>	<u>Score</u>

## E&E Rationale

1. A. Known soil (0.7 mg/kg), soil-gas (450,000 ug/m<sup>3</sup>), and groundwater (515 ug/L) contaminated with PCE. PCE Soil residential SRL for PCE is 0.51 mg/kg; Soil-gas RSL is 47 ug/m<sup>3</sup>, and AWQS for PCE is 5 ug/L; 7 points total
2. B1a. GW Concentration - 515 ug/L / 5 ug/L = 103; Soil-gas Concentration - (450,000 ug/m<sup>3</sup>)(0.03) / 47 ug/m<sup>3</sup> = 287; 103 +287=390; [EPA Region IX RSL for indoor air is 47 ug/L; 0.03 is attenuation factor for indoor air] 3 points
3. B1b. Based on volume of contaminated soil: Site area = 30,400 ft<sup>2</sup>; vadose thickness = 55 ft; soil volume = 1.67 million ft<sup>3</sup> = 61,900 yards<sup>3</sup>. 4 points
4. B1c. Groundwater is contaminated. 3 points
5. B1d. Halogenated Hydrocarbons 2 points
6. B1e. 0 points
7. B2ai. See pseudo-drastic scoring sheet. 3 points
8. B2aii. Soil and groundwater are contaminated, therefore no distance between soil contamination and groundwater contamination. 5 points
9. B2b. No surface water issues. 0 points
10. C1ai. No actual wells affected. 0 points
11. C1aii. No GW MCLs exceeded in a drinking water well. 0 points
12. C1aiii. Active Tucson Water well (A-031A) slightly less than one mile downgradient, and population served is 2,880. (A-031A pumped 400 ac-ft in 2014, and per capita water use in Tucson is 124 g/d/person.) 2 points
13. C1b. Mobile Home Park is inactive, but had 2.8 ppb PCE. 5 points
14. C1c. Groundwater is primary drinking water source more than one day per year. 5 points
15. C2. No surface water affected. 0 points
16. C3a. 450,000 ug/m<sup>3</sup> PCE was found in soil-gas immediately below (subslab) of current building. With 0.03 attenuation factor the result is 287 times the EPA RSL. 1-100 for population, zero distance; 3 points
17. C3b. No sensitive receptors within a quarter mile. 0 points
18. C3c. Slab and pavement not maintained as a vapor barrier at Site. 3 points

**Pseudo-DRASTIC SCORING FOR WQARF SITES**

If a DRASTIC Score from a "General" DRASTIC Map is available for this site, determine its value using that map and insert the score as specified in Part B.2.a.i. of the E&E form. If there is no DRASTIC MAP available for this site, use this form to establish the pseudo-DRASTIC score and insert the score as specified in Part B.2.a.i. of the E&E form. (Note: Upon receipt of groundwater clean up documentation, the DRASTIC score will reduce to its normal value.) DRASTIC Maps are available for Maricopa, Pima, Santa Cruz, Yuma, LaPaz, and some portions of Pinal County.

Sites without a DRASTIC Score (for those counties without a DRASTIC map):
