

IMPORTANT INFORMATION ABOUT YOUR DRINKING WATER**BOUSE WORLEY WATER SYTEM
Has Levels of Arsenic above Drinking Water Standards**

Our water system, Bouse Worley Water System, recently violated a drinking water standard. Although this is not an emergency, as our customers, you have a right to know what happened, what you should do, and what we did (or are doing) to correct this situation.

We routinely monitor for the presence of drinking water contaminants. Testing results we received on 7/2017 show that our system exceeds the standard or maximum contaminant level (MCL), for arsenic. The standard for arsenic is 10 parts per billion (ppb). The average level of arsenic for Bouse Worley over the last year has been .011 ppb.

What should I do?

You do not need to use an alternative (e.g. bottled) water supply. However, if you have specific health concerns, consult your doctor.

What does this mean?

This is not an immediate risk. If it had been you would have been notified immediately. Some people who drink water containing arsenic in excess of the MCL over many years could experience skin damage or problems with circulatory system, and many have an increased risk of getting cancer.

What is being done?

We're evaluating options for installing arsenic treatment.
