

Meeting Agenda/Summary

Meeting	Joint Onsite Wastewater Technical Work Groups Meeting
Date	September 20, 2022
Start / End Time	8:30 am – 4:30 pm
Meeting Location	Arizona Virtual Meeting Site, 1400 W Washington, Phoenix AZ (Large Training Room – 1 st Floor)
Virtual Meeting Link (Zoom)	Register in advance for this meeting: https://us02web.zoom.us/join/91512020000 After registering, you will receive a confirmation email containing information about joining the meeting.
Documents	Located in ShareFile https://azdeq.sharefile.com/f/fo1adffe-846a-4431-8902-abb44ee4bdca

Meeting Purpose: To restart the technical work groups to continue development of the Phase 2 program.

Meeting Attendees:

- Trevor Baggione, ADEQ
- David Bartholomew, Bartholomew Wastewater Services
- Colin Bishop, Anua
- Susan Brenton, MHCA
- Bryan Chiordi, Orenco
- Doug Disbrow, AZ Wastewater Services
- Sheryl Ervin, Infiltrator
- Jake Garrett, Gila County
- Theresa Gunn, ADEQ
- Matt Ivers, ADEQ
- Alex Kendrick, Gila County
- Jim King, Eljen
- Brian Kingsley, Maricopa County
- Karthik Kumarasamy, ADEQ
- David Lentz, Infiltrator
- Linneth Lopez, ADEQ
- Mike Madrid, Apache County
- Kathy Mills, Mills Engineering
- David Monihan, Coconino County
- Ray Morgan, ADEQ
- Nick Noble, Orenco
- Luke Peterson, AZDEQ
- Kitt Farrell Poe, UofA
- Naveen Savarirayan, ADEQ
- Mark Schaffer, Orenco
- Kevin Sherman, SeptiTech, Inc.
- Michael Stidham, EZ Treat
- Jenny Vitale
- Heidi Welborn, ADEQ contractor
- Joelle Wirth, Summit Environmental
- Scott Yarosh, Apache County

Agenda Topic	Notes
Welcome Jake Garrett, OWAC Chair	Jake welcomed the participants and thanked them for their time. He asked the group to remain courteous and focus on making progress.
Today's Meeting Theresa Gunn, Facilitator	<p>Theresa asked group to introduce themselves. She also reviewed the ground rules, agenda and guiding principles. The guiding principles were agreed upon at the February 2022 joint TWG meeting. The group agreed for the purposes of making decisions today they would take votes and majority would pass the recommendation forward. Minority opinions can be submitted in writing to ADEQ.</p> <div data-bbox="1276 597 1969 967" data-label="Complex-Block"> <p>Guiding Principles</p> <p>Phase 2 Guiding Principles</p> <ul style="list-style-type: none"> OWTF rules are based on sound science Rules encourage the development and use of new and evolving technologies Program provides leading-edge environmental and public health protection Rules ensures competent personnel and management and certification program Program allows Arizona to become a national leader in recycle and reuse of wastewater and resource recovery Program considers balance of environmental, public health, economic, property impacts Rules are radically simple for customers and staff (precise, easy to understand, rule language must be unambiguous) Department commitment of appropriate resources to manage, support and implement program </div>
ADEQ Report Trevor Baggione, ADEQ Water Quality Division Director	<div data-bbox="390 1003 1066 1317" data-label="Complex-Block"> <p>The 5-Year Plan</p> <p>ONSITE WASTEWATER TREATMENT REGULATORY PROGRAM</p> <p>5-Year Plan: 2021-2025 VERSION 1: January 2021</p> <p>ADEQ Arizona Department of Environmental Quality</p> </div> <p>Trevor reported on the progress ADEQ made during the summer break. He began with an overview on the progress we have made in implementing the 5-Year plan. He stated that the team met with leadership to gain further direction. Although more information is needed, leadership is generally supportive of the elements currently under discussion. A rulemaking exemption memo for Phase 2 rulemaking has been drafted and being reviewed by leadership. He also discussed the external ecosystem which could impact the agency and its direction.</p> <p>Theresa discussed the proposed timeline for the work groups to finish recommendations by May so that ADEQ can prepare for any legislative agenda items for the 2024 session. (See image below)</p>

Meeting Agenda/Summary

Agenda Topic	Notes
	<div data-bbox="403 430 1768 483"> <div>Living Up to Our Commitments</div> <div>ADEQ</div> <div>Phase 2 Direction</div> <div>ADEQ</div> </div> <div data-bbox="403 495 1768 803"> <div> <p>January 2021: 5 Year Plan</p> <p>Task 1: Initial Rulemaking The goal of Task 1 is to complete rulemaking to make needed fixes to the existing rule as expeditiously as possible. The type of rule changes to be made in this phase are identified below.</p> <p>Task 2: Ongoing Process Improvements The following are projects currently underway. ADEQ will provide OWAC with regular updates on the status of these activities.</p> <p>Task 3: Technical Work Groups Task 3 will involve more in-depth research, discussion, and identification of potential alternatives on the issues, which will not be addressed during the initial rulemaking in Task 1. Both OWAC and the WDAG have identified issues, which may need research and/or resolutions. See Section 3: Technical Work Groups for more information.</p> <p>Task 4: Additional Rulemaking If the workgroups identify further rule changes, a second rulemaking is being considered in 2024.</p> </div> <div> <p>Phase 1 NPRM Hearing: October 13, 1 pm, ADEQ</p> <ul style="list-style-type: none"> Improved OWAC Ongoing Development of SPS Mapping of Onsite Systems Infield Testing <p>Began Meeting in June 2021</p> <p>Phase 2 Exemption Memo under review to allow for 2024 rulemaking</p> </div> </div> <div data-bbox="1150 532 1417 592"> <p>You wanted to know if agency was committed</p> </div> <div data-bbox="1150 669 1333 727"> <p>We shared with leadership</p> </div> <div data-bbox="1543 565 1705 711">  </div>

Permit Structure Change

ADEQ

Ideas Under Discussion

ADEQ

Today:

- Permits are by technology
- 22 Permits
- Difficult to permit new technology
- Focus is on the technology

Proposed:

- 5 Permits
 - Residential
 - Multi-Family
 - Non-Residential
 - Repair
 - Provisional
- Focus on effluent quality

Certified Personnel

- Designers
- Installers
- Soil Investigators
- Service Providers (Operators)
- Pumpers

Potential requirements:

- Renewable Operating Permit (OP)
 - Requires inspection and pumping prior to renewal
- Monitoring and maintenance requirements: Multi-Family and Commercial
- Debate: What is the appropriate oversight for residential

Meeting Agenda/Summary

Agenda Topic	Notes
	<div data-bbox="405 428 1083 808"> <p>Additional Items in Discussion</p>  <p>More rigorous Notice of Transfer process</p> <p>A statewide database</p> <p>Nitrogen management areas</p> <p>ADEQ monitoring and compliance</p> <p>Ability to delegate program</p>  </div> <div data-bbox="1083 428 1766 808"> <p>Phase 2 Direction</p>  <p>Leadership felt the Key Elements were viable</p> <p>BUT....</p> <ul style="list-style-type: none"> • Will need to show data of a causation relationship • Use caution when regulating single family homeowner  </div> <div data-bbox="405 812 1083 1195"> <p>Ecosystem Changes Coming</p>  <p>New Governor</p> <p>May result in new ADEQ leadership</p>  </div> <div data-bbox="1083 812 1766 1195"> <p>TENTATIVE SCHEDULE</p>  <p>TWG Recommendations to OWAC</p> <ul style="list-style-type: none"> • May 2023 <p>OWAC Recommendations to ADEQ</p> <ul style="list-style-type: none"> • August 2023 <p>ADEQ Decisions</p> <ul style="list-style-type: none"> • October 2023 <p>Rulemaking</p> <ul style="list-style-type: none"> • 2024  </div>

Agenda Topic	Notes																																																												
Proposed Permit Framework Karthik Kumarasamy, ADEQ	<p>Karthik presented the proposed permit framework which changes from permit by type of technology to permit by structure type. The proposed framework developed earlier this year reduces the number of general permits from 23 to 5.</p> <p>The group approved the permit structure with the request that the PPL TWG consider the best name for the conditional/provisional permit.</p> <div><p>Permit types</p><p>Based on proposed development</p><table><tr><td>Residential<ul style="list-style-type: none">• Example: Single family homes• Characteristics: Typical sewage</td><td>Multi-family<ul style="list-style-type: none">• Example: Apartment buildings• Characteristics: Typical sewage</td><td>Non-residential<ul style="list-style-type: none">• Example: Restaurants• Characteristics: Complex waste streams, primarily black water</td><td>Repair/replacement<ul style="list-style-type: none">• Applies when an existing system needs repair or replacement.• Due to site constraints cannot meet the standards for new construction.</td><td>Conditional/Provisional<ul style="list-style-type: none">• Only allowed in locations with minimal risk.• Include remedy if pilot is unsuccessful.</td></tr></table></div>	Residential <ul style="list-style-type: none">• Example: Single family homes• Characteristics: Typical sewage	Multi-family <ul style="list-style-type: none">• Example: Apartment buildings• Characteristics: Typical sewage	Non-residential <ul style="list-style-type: none">• Example: Restaurants• Characteristics: Complex waste streams, primarily black water	Repair/replacement <ul style="list-style-type: none">• Applies when an existing system needs repair or replacement.• Due to site constraints cannot meet the standards for new construction.	Conditional/Provisional <ul style="list-style-type: none">• Only allowed in locations with minimal risk.• Include remedy if pilot is unsuccessful.																																																							
Residential <ul style="list-style-type: none">• Example: Single family homes• Characteristics: Typical sewage	Multi-family <ul style="list-style-type: none">• Example: Apartment buildings• Characteristics: Typical sewage	Non-residential <ul style="list-style-type: none">• Example: Restaurants• Characteristics: Complex waste streams, primarily black water	Repair/replacement <ul style="list-style-type: none">• Applies when an existing system needs repair or replacement.• Due to site constraints cannot meet the standards for new construction.	Conditional/Provisional <ul style="list-style-type: none">• Only allowed in locations with minimal risk.• Include remedy if pilot is unsuccessful.																																																									
Proposed Treatment Levels Karthik Kumarasamy, ADEQ and Nick Noble, Orenco	<p>Karthik and Nick presented the proposed treatment levels developed by the PPL TWG. After discussion, the members voted to move this information forward to OWAC with the caveat that the levels for conventional systems be added.</p> <table><tr><td></td><td>BOD5 (mg/L)</td><td>TSS (mg/L)</td></tr><tr><td>TL 1</td><td>25</td><td>30</td></tr><tr><td>TL 2</td><td>15</td><td>15</td></tr><tr><td>TL 3</td><td>10</td><td>10</td></tr><tr><td>TL 4</td><td>5</td><td>5</td></tr><tr><td></td><td>Fecal (#/100mL)</td><td></td></tr><tr><td>TL 1</td><td><1,000/100</td><td></td></tr><tr><td>TL 2</td><td><500/100</td><td></td></tr><tr><td>TL 3</td><td><200/100</td><td></td></tr><tr><td>TL 4</td><td><50/100</td><td></td></tr><tr><td></td><td>TN (mg/L)</td><td></td></tr><tr><td>TN 1</td><td><30</td><td></td></tr><tr><td>TN 2</td><td><20</td><td></td></tr><tr><td>TN 3</td><td><10</td><td></td></tr><tr><td>TN 4</td><td><5</td><td></td></tr><tr><td></td><td>P (mg/L)</td><td></td></tr><tr><td>TP 1</td><td>15</td><td></td></tr><tr><td>TP 2</td><td>10</td><td></td></tr><tr><td>TP 3</td><td>5</td><td></td></tr><tr><td>TP 4</td><td>2</td><td></td></tr></table>		BOD5 (mg/L)	TSS (mg/L)	TL 1	25	30	TL 2	15	15	TL 3	10	10	TL 4	5	5		Fecal (#/100mL)		TL 1	<1,000/100		TL 2	<500/100		TL 3	<200/100		TL 4	<50/100			TN (mg/L)		TN 1	<30		TN 2	<20		TN 3	<10		TN 4	<5			P (mg/L)		TP 1	15		TP 2	10		TP 3	5		TP 4	2

Meeting Agenda/Summary

Agenda Topic	Notes
Sizing Drain Fields Karthik Kumarasamy, P.E., ADEQ Principal Engineer	Karthik presented research into how Arizona sizes drain fields compared to other states. See attached presentation. Each member was asked to write a recommendation on how fields should be sized in the phase 2 rule. See attached photos. After discussion the group did not feel they could make a recommendation until they had a side by side comparison of the options.
Statewide Database	The group brainstormed the functions and end users of a new statewide database. See attached comments. A sub group was formed to review the input and put a plan together on how evaluate potential options for the new database.
Upcoming TWG Meetings	Each of the TWG groups discussed the issues they are working on. Other members asked questions and added items they would like to have the groups consider. All of the issues/tasks have been consolidated into the Onsite Wastewater Task Assignment Google Sheet.
Closing Remarks Jake Garrett, OWAC Chair	Jake thanked the members for their participation and successful meeting.

Guiding Principles

Phase 2 Guiding Principles

OWTF rules are based on sound science

Rules encourage the development and use of new and evolving technologies

Program provides leading-edge environmental and public health protection

Rules ensures competent personnel and management and certification program

Program allows Arizona to become a national leader in recycle and reuse of wastewater and resource recovery

Program considers balance of environmental, public health, economic, property impacts

Rules are radically simple for customers and staff (precise, easy to understand, rule language must be unambiguous)

Department commitment of appropriate resources to manage, support and implement program

Sizing Drainfields

Karthik Kumarasamy | PhD, PE
Principal Engineer

SAR for septic tank effluent

Percolation Rate from Percolation Test (minutes per inch)	SAR, Trench, Chamber, and Pit (gal/day/ft ²)	SAR, Bed (gal/day/ft ²)
Less than 1.00	A site-specific SAR is required	A site-specific SAR is required
1.00 to less than 3.00	1.20	0.93
3.00	1.10	0.73
4.00	1.00	0.67
5.00	0.90	0.60
7.00	0.75	0.50
10.0	0.63	0.42
15.0	0.50	0.33
20.0	0.44	0.29
25.0	0.40	0.27
30.0	0.36	0.24
35.0	0.33	0.22
40.0	0.31	0.21
45.0	0.29	0.20
50.0	0.28	0.19
55.0	0.27	0.18
55.0+ to 60.0	0.25	0.17
60.0+ to 120	0.20	0.13
Greater than 120	A site-specific SAR is required	A site-specific SAR is required

G. Is the texture of the horizon loam or sandy loam and the structure massive?	0.20	0.13
H. Is the texture sandy clay, clay, or silty clay of low clay content and the structure moderate or strong?	0.20	0.13
I. Is the texture sandy clay loam, clay loam, or silty clay loam and the structure weak?	0.20	0.13
J. Is the texture sandy clay loam, clay loam, or silty clay loam and the structure moderate or strong?	0.40	0.27
K. Is the texture sandy loam, loam, or silty loam and the structure weak?	0.40	0.27
L. Is the texture sandy loam, loam, or silt loam and the structure moderate or strong?	0.60	0.40
M. Is the texture fine sand, very fine sand, loamy fine sand, or loamy very fine sand?	0.40	0.27
N. Is the texture loamy sand or sand?	0.80	0.53
O. Is the texture coarse sand?	1.20	A site-specific SAR is required

SARa – Cleaner effluent

$$SAR_a = \left[\frac{11.39}{\sqrt{TSS + BOD_5}} - 1.87 \right] SAR^{1.13} + 1 SAR$$

constant

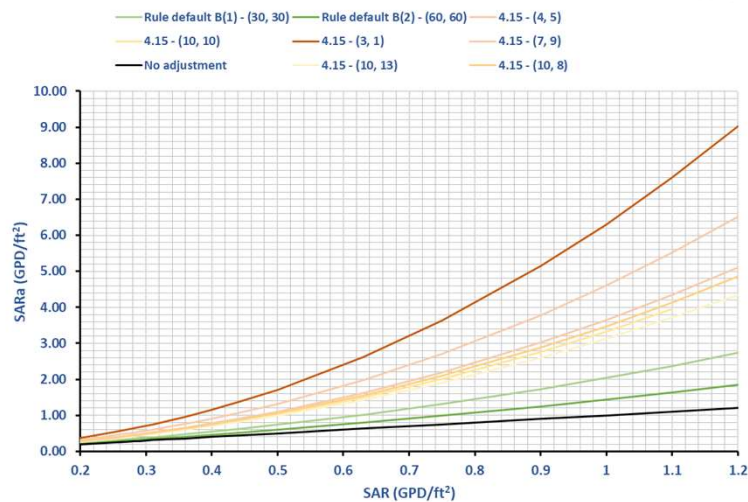

Moves it in the vertical axis

One quantity (SAR_a) varies as a **power** of another (SAR).
For a product, TSS and BOD are constant.

- " SAR_a " is the adjusted soil absorption rate for disposal works design in gallons per day per square foot,
- "TSS" is the total suspended solids in wastewater delivered to the disposal works in milligrams per liter,
- " BOD_5 " is the five-day biochemical oxygen demand of wastewater delivered to the disposal works in milligrams per liter, and
- "SAR" is the soil absorption rate for septic tank effluent determined by the subsurface characterization method described in R18-9-A310.

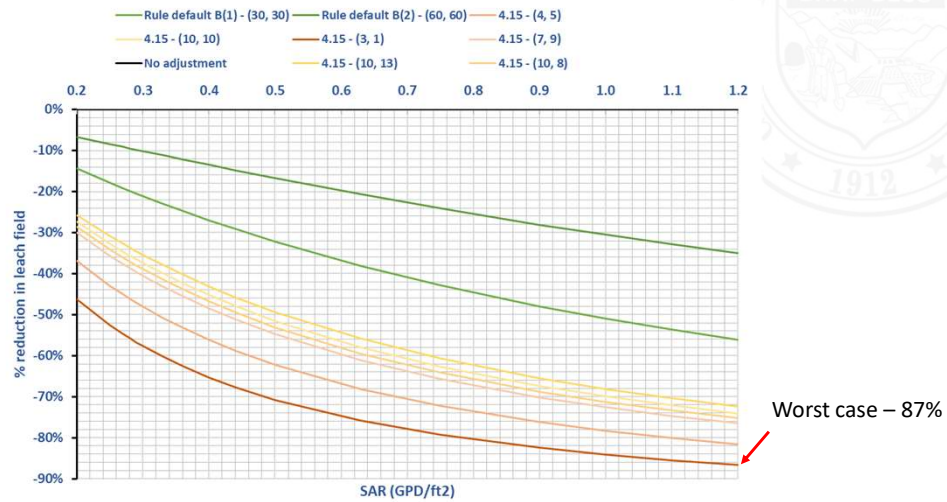

Effect of adjustment

Absolute

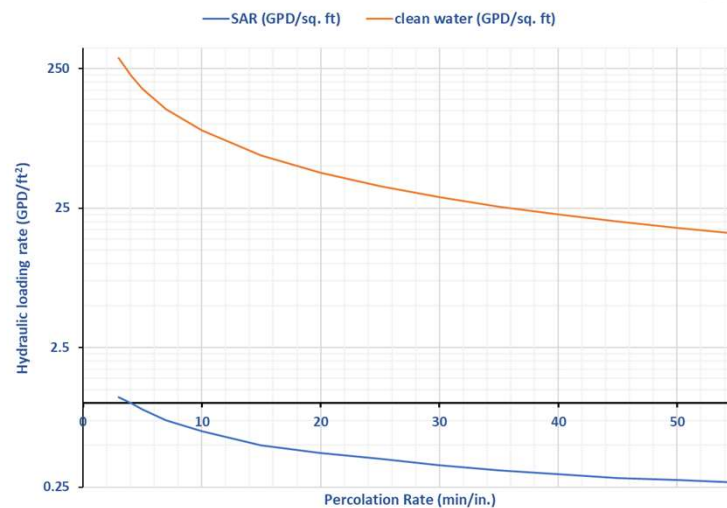

Effect of adjustment

Change basis

Impact of treatment

via septic tank

% increase in loading rate septic effluent vs. clean water

Comparison with other states

- Washington
- Colorado
- North Carolina
- Utah
- Virginia
- EPA 2002 (i.e., Tyler 2002)

Washington

Maximum Hydraulic Loading Rate

Soil Type	Soil Textural Classification Description	Loading Rate for Residential Effluent Meeting /TL D or greater (gal./sq. ft./day)
1	Gravelly and very gravelly coarse sands, all extremely gravelly soils excluding Soil types 5 & 6, all soil types with greater than or equal to 90% rock fragments.	2.0
2	Coarse sands.	2.0
3	Medium sands, loamy coarse sands, loamy medium sands.	1.6
4	Fine sands, loamy fine sands, sandy loams, loams.	1.2
5	Very fine sands, loamy very fine sands; or silt loams, sandy clay loams, clay loams and silty clay loams with a moderate structure or strong structure (excluding a platy structure).	0.6
6	Other silt loams, sandy clay loams, clay loams, silty clay loams.	0.3
7	Sandy clay, clay, silty clay and strongly cemented firm soils soil with a moderate or strong platy structure any soil with a massive structure any soil with appreciable amounts of expanding clays.	Not suitable

With the higher level of treatment, there will be a substantial reduction of the biomat. Recommend a maximum increase of 20%

Loading rates are different between AZ and US EPA 2002 report

	Massive	Structureless	0.2	0.5
	Platy	Weak, Mod., Strong		
	Prismatic, Blocky, Granular	Weak	0.4	0.6
Silt Loam		Moderate	0.6	0.8
	Massive	Structureless		0.2
	Platy	Weak, Mod., Strong		
	Prismatic, Blocky, Granular	Weak	0.4	0.6
Sandy clay loam, Clay loam, Silty clay loam		Moderate, Strong	0.6	0.8
	Massive	Structureless		
	Platy	Weak, Mod., Strong		
	Prismatic, Blocky, Granular	Weak	0.2	0.3
		Moderate, Strong	0.4	0.6
	Massive	Structureless		

Loading rate – Threshold based

Cutoff – 30 mg/l (Absolute)

Loading rate – Threshold based

Cutoff – 30 mg/l (Change basis)

Conclusions

- Is 20% additional reduction a real problem?
 - 67% reduction with peat and textile filters – rule default
- It is not a math problem.

Jenny's SAR Table

<u>Soil Type</u>	<u>SAR</u>	<u>SAR_{CEM}</u>	<u>Pit</u>
sandy	0.7	0.6	0.9
silty	0.5	0.44	↓
clay	0.4	0.3	
silty sand	0.6	0.5	
clayey sand	0.44	0.4	
silty clay	0.4	0.3	
silty sand trace clay	0.5	0.44	
sandy gravel	0.6	0.6	
alluvium	0.6	0.5	
colluvium	0.5	0.44	
Schist	perc	perc	
Fractured	perc	perc	

SAR_a = 2001 Formula w/ cap reduction

IF I WAS GOVERNOR...

DRAINFIELDS WOULD BE
DESIGNED/SIZED BASED ON:

- Site Investigation/Treatment
Level
- Strong Emphasis on Reuse/
Recycle to reduce water
"disposal"

• Cap At ~~30%~~ TO 40%
40% CAP

• DO ANALYSES WITH STADIUM
SUGGESTION TO IMPROVE THE
REDUCTION

• CONSIDER CAPING AT THE

EPA BOO DAILY LOADING LIMIT

Sized based on
bedroom count
and fixture count
as currently written
in combo w/ SAR

Adjusted SAR OK
but limited to
no more than ^{app} 30%

Straight percentage
similar to other

20-25% for
NSF/ANSI products

Field testing/verification
for add'l credit

USE the SARA
equation

limit the maximum loading
rate on each soil type
based on the treatment level

ie. 10/10 BOD/TSS 1.2 gpd/ft²

if the owner wants more gpd/ft²

additional survey needs to be
done

KSATs

Mounding Analysis

liner Flow Analysis

Keeping the equation aligned with ADEQ's objective to reward performance, so I would keep an equation.

However, extraordinary SARs like 8 gpd/sf appear too high. I would consider capping SARs to levels supported by science.

I would maintain the current chamber sizing equation, which is based upon large-scale field performance testing.

Where PPLs include a 0.70^{UPC} sizing factor for gravelless technology, I would maintain those allowances

I don't think there is a significant issue with SAR & SARa.

There is a issue with water moving away from the disposal system and going into environment.

IMPLEMENT "NO DRAINFIELD"
STRATEGY. ALL EFFLUENT
WOULD BE:

1. REUSED
2. STORED
3. RECHARGED

NEED FOR DRAINFIELDS
ELIMINATED. STRATEGY
WOULD ASSURE AZ
WATER SECURITY

ADEQ Onsite Wastewater Treatment Joint TWG Meeting September 20, 2022

Statewide Database Notes

The following are the suggestions from the members provided during the meeting.

Options:

- Option 1: Counties keep their databases which are linked to a state database using REM Online or other program (no standardized forms)
- Option 2: State sets up a new database which is information repository only (no permitting)
- Option 3: Single state permitting, reporting, information repository to be used by all delegated authorities (standardized forms)
- Option 4: State website is a portal that links to the locations where the information is stored on other county websites
- Option 5: One of the systems above with links to documents, maps and other resources designers need to design a system

Potential Users (One Stop Shop: Whether ADEQ or County)

- Regulators
- Service Providers
- Relators
- Homeowners

Information Repository

NOT Transfer Reports

Interactive map of each permitted system

- Click on a parcel and get information
- Overlay with DWR well locations; flood plain and floodway; etc. (for designers)

Information for each permitted system:

- Photos of install
- Permit documents
- Inspection report(s)
- Maintenance reports
- Monitoring reports

- Changes to System
- NOVs

Triggered Functions

- Alerts to service provider when a property is sold
- Alerts regulator if permit is expired (not renewed)
- Alerts if NOT is not filed

Possible Databases:

- Fast Forms
- REM
- Fetch GIS

State database contacts:

FL - Eb Roder - (850) 901-6512

GA - Tom Vanderboom - (404) 657-6534

VA - Lance Gregory - (804) 864-7491

Barriers/Questions

- No WIFI or cell coverage at remote locations
 - Need to be able to keep data in cache until in service range
- What information will be viewable by: (protection of personal property documents)
 - Homeowner
 - Service Provider
 - Manufacturer (if alternative)
 - Public
 - Realtors/New Buyers
 - Option: anyone can view but limit on who can upload or enter data
- Can documents live in the county websites (planning, building, accessors) and link to the state site
 - Do not want to duplicate what is already online
 - Have the state be a portal that links to other sites but doesn't house the information
- How to get existing information into the new database
- How to protect service providers from getting their business stolen by others
 - Use ID#

QUESTIONS:

- What information does ADEQ need to manage the program
- Is this database to serve the needs of the designer? Before system is installed.

Suggestions:

- Don't build our own database
- Track actions to determine life cycle costs of owning a system
