

Question Asked Date/Time	Question Asked
01:03:07 PM MST	thanks for the info on this complex subject.
01:03:54 PM MST	Thankyou!! Very cute kids!!
12:14:26 PM MST	Is ADEQ performing jurisdictional determinations on private land?
12:14:39 PM MST	Will the Arizona jurisdiction determination replace EPA's jurisdiction determination?
12:15:07 PM MST	Do you expect many changes to the currently published PSWL?
12:16:05 PM MST	<p>According to NACO (national association of counties),..... The WOTUS definition directly impacts local governments as owners and operators of local infrastructure, coregulators and stewards of the environment. Counties own and operate public safety water conveyances, stormwater</p> <p>municipal separate stormwater sewer systems (MS4), green infrastructure construction and maintenance projects, water reuse and infrastructure, and emergency management readiness. Depending on the final definition of WOTUS,</p> <p>counties may need to apply for a federal permit to maintain or build new infrastructure projects... how will this affect new wastewater plants that will provide direct potable water?</p>
12:16:35 PM MST	So this paper addresses significant nexus evaluations, as proposed under Rapanos, and used in pre-2015 WOTUS definition jurisdictional evaluations, for the purpose of identifying surface waters as WOTUS?
12:17:45 PM MST	Does ADEQ have any intention of revision the acronym? It is confusing with SWPPP, even in discussions.
12:17:48 PM MST	link to paper?
12:19:02 PM MST	Could you please state the question you are answering?
12:19:11 PM MST	It will keep us ( who deal with both) in our feet ! :)
12:19:23 PM MST	Hello, we cant see other participant questions; could you please read the questions as they are answered?
12:22:46 PM MST	How long is a reach, typically? Two dozen WBIDs over several hundred miles is not a lot!
12:24:20 PM MST	Will ADEQ be disclosing the data analysis process that it uses on a per reach basis?
12:24:55 PM MST	Can you define "normal conditions" and "typical year"?
12:25:59 PM MST	Is the ADEQ intention to complete a JD analysis for non-WOTUS that are protected under SWPP?
12:26:05 PM MST	What triggers a "field survey"?
12:27:14 PM MST	What type of data is ADEQ using? Is data from "citizen scientists" included? If so, what measures are in place to ensure samples are properly collected and preserved?

12:34:19 PM MST	Could you please comment on how springs, which might not have a reach as they may not be in a streambed, are protected under the SWPP? Only a few of our thousands of springs are listed on App B of the PSWL. Springs can be permanent water sources that are important for wildlife and livestock, even if they don't connect to a TNW. Thanks!
12:35:31 PM MST	Maybe it is too soon to ask this, but I do not want to forget it. How will an ephemeral water body that flows reliably during the summer monsoon, or even during winter storm events, at a volume, frequency, and duration sufficient to impact a downstream RPW or TNW be characterized? Will such a water body be considered a non-WOTUS protected surface water on the PSWL?
12:35:31 PM MST	How does the definition of reaches by flow regime address the concept of relevant reach under Rapanos and the Pre-2015 Rule?
12:35:39 PM MST	In the end will there be two separate regulatory regimes that affect a water body simultaneously, one State and one Federal?
12:35:41 PM MST	Will existing AJD decisions be considered? Onsite field inspection is critical and required by the Corps for each determination, how would this be completed for private property?
12:39:15 PM MST	Would ADEQ's determination preclude property owner's from completing their own determination through the Corps as usual?
12:39:47 PM MST	Is it biological, chemical AND physical or OR physical? Was it always this definition or is this new?
12:40:11 PM MST	You bet - will send an email! Nice to see you, Erin! :)
12:41:09 PM MST	How are effluent-dependent reaches evaluated? Using a 30-yr avg, the reach may be perennial or intermittent due to the discharge of effluent but, as drought continues, that effluent may be diverted for reuse or recharge.
12:42:06 PM MST	I will look at that website. Thank you.
12:55:49 PM MST	When does ADEQ request comments on this white paper to be submitted by?
12:57:25 PM MST	Will the rulemaking be oriented to the process of identifying PSWL and SWQS or will it have specific chemicals with associated standards or specific reaches?
12:57:56 PM MST	When will the formal public comment period take place?
12:59:45 PM MST	Is ADEQ involved in the development of the new toilet-to-tap regulations?
12:59:56 PM MST	My understanding is that ADEQ is likely to adopt in Article 2 numeric standards that are in many cases similar to those in Article 1. If that assumption is correct, given the delay and uncertainty regarding EPA approval of the 2019 rules, will the Article 2 numeric standards likely be comparable to the approved 2016 standards?
